

# THE MILITARY BALANCE

THE INTERNATIONAL INSTITUTE FOR STRATEGIC STUDIES

2004-2005

IISS

### The Military Balance 2004•2005 Editor's Foreword

Since the end of the Cold War, traditional military thinking and defence planning methodologies have hampered governments' abilities to deal with increasingly diverse threats posed by failed states and non-state actors – as illustrated by 9/11. Moreover, for some countries, progressing defence concepts remains hostage to the will and political considerations of governments, thus limiting their ability to respond to new challenges in an appropriate and timely fashion.

*The Military Balance 2004•2005's* analysis shows that while this trend still exists in many states, others are beginning to find ways of working more effectively against the plethora of global threats which are facilitated by globalisation, trade liberalisation, and weak borders. Moreover, there are signs of greater military cooperation between countries which historically have been adversaries, thereby pointing to the possible emergence of new trends in defence cooperation.

In 2004 defence planning – the structure, equipping and employment of armed forces – is complicated by the amorphous nature of security threats which challenge the sovereignty of states as traditionally understood, and which have increased in number. New approaches to the way states respond are being sought by governments as they grapple with these increasingly overlapping dangers. Terrorism, illicit trafficking, and organised crime are tightly interwoven, and the rising number of militarily capable non-state armed groups (see pp. 362–377) is a growing challenge as many of these groups cooperate commercially as well as militarily. The challenge for states, therefore, is how to integrate their armed forces, border control forces, and police forces into an architecture capable of reacting to and managing 21<sup>st</sup> century threats in an effective and seamless fashion.

In this respect, for some, the concept of common security agencies and common security budgets is being given serious thought, as is the possibility of some form of common doctrine to help national armed forces – each with their own traditions and experience – cope with the great variety of tasks that they now face. Some states are developing transformation programmes of their own to bring a networked approach to defence and security; although networked national systems will be limited in their effect unless they integrate and are compatible with those of other states. The more developed programmes increasingly concentrate on space-based systems (see pp. 253–260) and attempt to incorporate all government security agencies in a network-centric matrix which should enable seamless operations at an international level.

To facilitate a comprehensive network-centric approach, it is necessary to identify the separate capabilities of national armed forces so that they can become interoperable. In Europe, within NATO and through the Euro-Atlantic Partnership Council (EAPC) mechanism, some work has been done to identify common capabilities. Much more, however, needs to be done if global capabilities are to be assessed, and if the military deployments of some countries are to be of more than just symbolic value. Increasing joint military exercises between countries shows, however, that some progress is being made (see p. 30, 39, 102 and 224). Some new regional military organisations, notably in Africa (p. 19), are also emerging.

The change in traditional alliance structures and the advent of multinational alliances of convenience, or 'coalitions of the willing', assembled to generate a sufficient number of troops for operations, has resulted in the grouping of a large and diverse number of temporary 'allies'. This has presented new challenges in terms of compatibility and interoperability. However, even among NATO allies and coalition partners, interoperability is proving a complex issue – and not only for reasons of technological compatibility; assuring 'psychological compatibility' between allies also demands a degree of flexibility which is currently lacking. The US, for example, is faced with interoperability problems with some of its allies because its emphasis on 'warfighting', which dwells heavily on force protection, does not fit easily with Peace Support Operations or those defined by the Petersberg tasks. The Iraq coalition lacks cohesion among the 10–15 contributing states that make up a multi-national division (see p. 111). Not least among their limitations is the lack of a common operational language.

Nevertheless, those countries which are bonded by NATO membership arguably show greater operational efficiency and cohesion. The same operational cohesion was seen in Afghanistan in *Operation Enduring Freedom*, and within the International Security Assistance Force (ISAF) where the benefits of the NATO alliance with its common procedures and standards are self-evident. It is unfortunate that these considerable practical advantages have been largely forgotten in the political wrangling over the alliance's future.

Another challenge for planners that has been exemplified by military operations in Iraq and Afghanistan is how to cope with adversaries' increasing use of asymmetrical methods. An important lesson has been that technology is not the key response to this aspect of warfare. Furthermore, the response of a technologically inferior force to overwhelming technological superiority is likely to be one that uses increasingly sophisticated, but unpredictable, asymmetrical methods. In coping with this aspect of combat – which is not new – traditional conventional tactics and methods still have a place on the battlefield, particularly in terms of the collection of human intelligence and policing. Moreover, in post-conflict environments, the dominant security authority has to take responsibility for myriad security roles in the absence of strong local indigenous structures, and has to plan accordingly, in advance of the operation. Finally, in the post-conflict phase and in peace support operations, the 'hearts and minds' of a population become the 'territory' that has to be captured and held. Governments need to realise that such operations are manpower intensive, as the human component replaces the weapon system as the key enabler to success.

Christopher Langton  
Editor, *The Military Balance*  
London

### The Military Balance 2004•2005 Preface

*The Military Balance* is updated each year to provide an accurate assessment of the military forces and defence expenditures of 169 countries. The data in the current edition is according to IISS assessments as at August 2004. New data entries have been shaded grey. Inclusion of a country or state in *The Military Balance* does not imply legal recognition or indicate support for any government.

---

#### GENERAL ARRANGEMENT

**Part I** of *The Military Balance* comprises the regional trends and military capabilities of countries grouped by region. Thus North America includes the United States and Canada. Regional groupings are preceded by a short introduction describing the military issues facing the region. There are tables depicting major training exercises, nuclear delivery and warhead holdings and military satellites. Conventional Forces in Europe Treaty data is also shown. There is an essay on military transformation and space.

**Part II** contains macro-economic and defence economic data of countries grouped by region. Tables show comparisons of arms-trade data, defence expenditure, and military manpower for the years of 2000, 2001 and 2002. To concur with NATO practices Canada is included with Europe in Part II.

**Part III** contains information on non-state armed groups and their activity. Additionally, there is a report on global terrorism.

The loose wall-map is updated for 2004 to show data on recent and current armed conflicts, including fatalities and costs.

---

#### USING THE MILITARY BALANCE

The country entries in *The Military Balance* are a quantitative assessment of the personnel strengths and equipment holdings of the world's armed forces. The strengths of forces and the numbers of weapons held are based on the most accurate data available or, failing that, on the best estimate that can be made. The data presented each year reflect judgements based on information available to the IISS at the time the book is compiled. Where information differs from previous editions, this is mainly because of substantive changes in national forces, but it is sometimes because the IISS has reassessed the evidence supporting past entries. An attempt is made to distinguish between these reasons for change in the text that introduces each regional section, but care must be taken in constructing time-series comparisons from information given in successive editions.

**In order to interpret the data in the country entries correctly, it is essential to read the explanatory notes beginning on page 7.**

The large quantity of data in *The Military Balance* has been compressed into a portable volume by extensive employment of abbreviations. An essential tool is therefore the alphabetical index of abbreviations, which appears on the laminated card at the back of the book. For ease of reference, this may be detached and used as a bookmark.

---

#### ATTRIBUTION AND ACKNOWLEDGEMENTS

The International Institute for Strategic Studies owes no allegiance to any government, group of governments, or any political or other organisation. Its assessments are its own, based on the material available to it from a wide variety of sources. The cooperation of governments of all listed countries has been sought and, in many cases, received. However, some data in *The Military Balance* are estimates. Care is taken to ensure that these are as accurate and free from bias as possible. The Institute owes a considerable debt to a number of its own members, consultants and all those who helped compile and check material. The Director and staff of the Institute assume full responsibility for the data and

judgements in this book. Comments and suggestions on the data presented are welcomed. Suggestions on the style and method of presentation are also much appreciated.

Readers may use data from *The Military Balance* without applying for permission from the Institute on condition that the IISS and *The Military Balance* are cited as the source in any published work. However, applications to reproduce portions of text, complete country entries or complete tables from *The Military Balance* must be referred to the publishers. Prior to publication, applications should be addressed to: Journals Rights and Permissions, Oxford University Press, Great Clarendon Street, Oxford OX2 6DP, UK, with a copy to the Editor of *The Military Balance*.

## Explanatory Notes

---

### ABBREVIATIONS AND DEFINITIONS

Abbreviations are used throughout to save space and avoid repetition. The abbreviations may have both singular or plural meanings; for example, 'elm' = 'element' or 'elements'. The qualification 'some' means *up to*, while 'about' means *the total could be higher than given*. In financial data, '\$' refers to US dollars unless otherwise stated; billion (bn) signifies 1,000 million (m). Footnotes particular to a country entry or table are indicated by letters, while those that apply throughout the book are marked by symbols (\* for training aircraft counted by the IISS as combat-capable, and † where serviceability of equipment is in doubt). A full list of abbreviations appears on the detachable laminated card at the back of the book.

---

### COUNTRY ENTRIES

Information on each country is shown in a standard format, although the differing availability of information results in some variations. Country entries include economic, demographic and military data. Military data include manpower, length of conscript service, outline organisation, number of formations and units and an inventory of the major equipment of each service. This is followed, where applicable, by a description of the deployment of each service. Details of national forces stationed abroad and of foreign-stationed forces are also given.

---

### ARMS ORDERS AND DELIVERIES

Tables in the regional texts show arms orders and deliveries listed by country buyer for the past and current years, together with country supplier and delivery dates, if known. Every effort has been made to ensure accuracy, but some transactions may not be fulfilled or may differ from those reported.

---

### GENERAL MILITARY DATA

#### Manpower

The 'Active' total comprises all servicemen and women on full-time duty (including conscripts and long-term assignments from the Reserves). Under the heading 'Terms of Service', only the length of conscript service is shown; where service is voluntary there is no entry. 'Reserve' describes formations and units not fully manned or operational in peacetime, but which can be mobilised by recalling reservists in an emergency. Unless otherwise indicated, the 'Reserves' entry includes all reservists committed to rejoining the armed forces in an emergency, except when national reserve service obligations following conscription last almost a lifetime. *The Military Balance* bases its estimates of effective reservist strengths on the numbers

## **8 Preface and Explanatory Notes**

available within five years of completing full-time service, unless there is good evidence that obligations are enforced for longer. Some countries have more than one category of 'Reserves', often kept at varying degrees of readiness. Where possible, these differences are denoted using the national descriptive title, but always under the heading of 'Reserves' to distinguish them from full-time active forces.

### **Other Forces**

Many countries maintain paramilitary forces whose training, organisation, equipment and control suggest they may be used to support or replace regular military forces. These are listed, and their roles described, after the military forces of each country. Their manpower is not normally included in the Armed Forces totals at the start of each entry. Home Guard units are counted as paramilitary. Where paramilitary groups are not on full-time active duty, '(R)' is added after the title to indicate that they have reserve status. When internal opposition forces are armed and appear to pose a significant threat to a state's security, their details are listed separately after national paramilitary forces.

### **Equipment**

Quantities are shown by function and type, and represent what are believed to be total holdings, including active and reserve operational and training units and 'in store' stocks. Inventory totals for missile systems – such as surface-to-surface missiles (SSM), surface-to-air missiles (SAM) and anti-tank guided weapons (ATGW) – relate to launchers and not to missiles. Stocks of equipment held in reserve and not assigned to either active or reserve units are listed as 'in store'. However, aircraft in excess of unit establishment holdings, held to allow for repair and modification or immediate replacement, are not shown 'in store'. This accounts for apparent disparities between unit strengths and aircraft inventory strengths.

### **Operational Deployments**

Where deployments are overseas, *The Military Balance* lists permanent bases and does not normally list short-term operational deployments, particularly where military operations are in progress. An exception is made in the case of peacekeeping operations. Recent developments are also described in the text for each regional section.

## GROUND FORCES

The national designation is normally used for army formations. The term 'regiment' can be misleading. It can mean essentially a brigade of all arms; a grouping of battalions of a single arm; or (as in some instances in the UK) a battalion group. The sense intended is indicated in each case. Where there is no standard organisation, the intermediate levels of command are shown as headquarters (HQs), followed by the total numbers of units that could be allocated to them. Where a unit's title overstates its real capability, the title is given in inverted commas, with an estimate given in parentheses of the comparable unit size typical of countries with substantial armed forces. For guidelines for unit and formation strengths, see below.

### Principal Ground Equipment Definitions

*The Military Balance* uses the following definitions of equipment:

**Main Battle Tank (MBT)** An armoured, tracked combat vehicle, weighing at least 16.5 metric tonnes unladen, that may be armed with a 360° traverse gun of at least 75mm calibre. Any new-wheeled combat vehicles that meet the latter two criteria will be considered MBTs.

**Armoured Combat Vehicle (ACV)** A self-propelled vehicle with armoured protection and cross-country capability. ACVs include:

**Armoured Infantry Fighting Vehicle (AIFV)** An armoured combat vehicle designed and equipped to transport an infantry squad, armed with an integral/organic cannon of at least 20mm calibre. Variants of AIFVs are also included and indicated as such.

**Armoured Personnel Carrier (APC)** A lightly armoured combat vehicle, designed and equipped to transport an infantry squad and armed with integral/organic weapons of less than 20mm calibre. Variants of APCs converted for other uses (such as weapons platforms, command posts and communications vehicles) are included and indicated as such.

**Artillery** A weapon with a calibre of 100mm and above, capable of engaging ground targets by delivering primarily indirect fire. The definition covers guns, howitzers, gun/howitzers, multiple-rocket launchers and mortars.

### Military Formation Strengths

The manpower strength, equipment holdings and organisation of formations such as brigades and divisions differ widely from country to country. Where possible, the normal composition of formations is given in parentheses. It should be noted that where both divisions and brigades are listed, only independent or separate brigades are counted and not those included in divisions.

## NAVAL FORCES

Categorisation is based on operational role, weapon fit and displacement. Ship classes are identified by the name of the first ship of that class, except where a class is recognised by another name (such as *Udalay*, *Petya*). Where the class is based on a foreign design or has been acquired from another country, the original class name is added in parentheses. Each class is given an acronym. All such designators are included in the list of abbreviations. The term 'ship' refers to vessels with over 1,000 tonnes full-load displacement that are more than 60 metres (m) in overall length; vessels of lesser displacement, but of 16m or more overall length, are termed 'craft'. Vessels of less than 16m overall length are not included. The term 'commissioning' of a ship is used to mean the ship has

Units and formation strength	
<b>Company</b>	100–200
<b>Battalion</b>	500–800
<b>Brigade (Regiment)</b>	3,000–5,000
<b>Division</b>	15,000–20,000
<b>Corps (Army)</b>	60,000–80,000

## 10 Preface and Explanatory Notes

completed fitting out and initial sea trials, and has a naval crew; operational training may not have been completed, but otherwise the ship is available for service. 'Decommissioning' means that a ship has been removed from operational duty and the bulk of its naval crew transferred. Removing equipment and stores and dismantling weapons, however, may not have started. Where known, ships in long-term refit are shown as such.

### Principal Naval Equipment Definitions

To aid comparison between fleets, the following definitions, which do not necessarily conform to national definitions, are used:

**Submarines** All vessels equipped for military operations and designed to operate primarily below the surface. Those vessels with submarine-launched ballistic missiles are listed separately under 'Strategic Nuclear Forces'.

**Principal Surface Combatant** This term includes all surface ships with both 1,000 tonnes full load displacement and a weapons system for other than self-protection. All such ships are assumed to have an anti-surface ship capability. They comprise: aircraft carriers (defined below); cruisers (over 8,000 tonnes) and destroyers (less than 8,000 tonnes), both of which normally have an anti-air role and may also have an anti-submarine capability; and frigates (less than 8,000 tonnes) which normally have an anti-submarine role. Only ships with a flight deck that extends beyond two-thirds of the vessel's length are classified as aircraft carriers. Ships with shorter flight decks are shown as helicopter carriers.

**Patrol and Coastal Combatants** These are ships and craft whose primary role is protecting a state's sea approaches and coastline. Included are corvettes (500–1,500 tonnes with an attack capability), missile craft (with permanently fitted missile-launcher ramps and control equipment) and torpedo craft (with anti-surface-ship torpedoes). Ships and craft that fall outside these definitions are classified as 'patrol' and divided into 'offshore' (over 500 tonnes), 'coastal' (75–500 tonnes), 'inshore' (less than 75 tonnes) and 'riverine'. The prefix 'fast' indicates that the ship's speed is greater than 30 knots.

**Mine Warfare** This term covers surface vessels configured primarily for mine laying or mine countermeasures (such as mine-hunters, minesweepers or dual-capable vessels). They are further classified into 'offshore', 'coastal', 'inshore' and 'riverine' with the same tonnage definitions as for 'patrol' vessels shown above.

**Amphibious** This term includes ships specifically procured and employed to disembark troops and their equipment onto unprepared beachheads by means such as landing craft, helicopters or hovercraft, or directly supporting amphibious operations. The term 'Landing Ship' (as opposed to 'Landing Craft') refers to vessels capable of an ocean passage that can deliver their troops and equipment in a fit state to fight. Vessels with an amphibious capability but not assigned to amphibious duties are not included. Amphibious craft are listed at the end of each entry.

**Support and Miscellaneous** This term covers auxiliary military ships. It covers four broad categories: 'underway support' (e.g., tankers and stores ships), 'maintenance and logistic' (e.g., sealift ships), 'special purposes' (e.g., intelligence collection ships) and 'survey and research' ships.

**Merchant Fleet** This category is included in a state's inventory when it can make a significant contribution to the state's military sealift capability.

**Weapons Systems** Weapons are listed in the following order: land-attack missiles, anti-surface ship missiles, surface-to-air missiles, guns, torpedo tubes, other anti-submarine weapons, and helicopters. Missiles with a range of less than 5km, and guns with a calibre of less than 76mm,

are not included. Exceptions may be made in the case of some minor combatants with a primary gun armament of a lesser calibre.

**Aircraft** All armed aircraft, including anti-submarine warfare and maritime-reconnaissance aircraft, are included as combat aircraft in naval inventories.

**Organisations** Naval groupings such as fleets and squadrons frequently change and are often temporary; organisations are shown only where it is meaningful.

## AIR FORCES

The term 'combat aircraft' refers to aircraft normally equipped to deliver air-to-air or air-to-surface ordnance. The 'combat' totals include aircraft in operational conversion units whose main role is weapons training, and training aircraft of the same type as those in front-line squadrons that are assumed to be available for operations at short notice. Training aircraft considered to be combat capable are marked with an asterisk (\*). Armed maritime aircraft are included in combat aircraft totals. Operational groupings of air forces are shown where known. Squadron aircraft strengths vary with aircraft types and from country to country.

### Principal Air Force Equipment Definitions

Different countries often use the same basic aircraft in different roles; the key to determining these roles lies mainly in aircrew training. In *The Military Balance* the following definitions are used as a guide:

#### Fixed Wing Aircraft

**Fighter** This term is used to describe aircraft with the weapons, avionics and performance capacity for aerial combat. Multi-role aircraft are shown as fighter ground attack (FGA), fighter, reconnaissance and so on, according to the role in which they are deployed.

**Bombers** These aircraft are categorised according to their designed range and payload as follows:

**Long-range** Capable of delivering a weapons payload of more than 10,000kg over an unrefuelled radius of action of over 5,000km;

**Medium-range** Capable of delivering weapons of more than 10,000kg over an unrefuelled radius of action of between 1,000km and 5,000km;

**Short-range** Capable of delivering a weapons payload of more than 10,000kg over an unrefuelled radius of action of less than 1,000km.

A few bombers with the radius of action described above, but designed to deliver a payload of less than 10,000kg, and which do not fall into the category of FGA, are described as light bombers.

#### Helicopters

**Armed Helicopters** This term is used to cover helicopters equipped to deliver ordnance, including for anti-submarine warfare. They may be further defined as:

**Attack** Helicopters with an integrated fire control and aiming system, designed to deliver anti-armour, air-to-ground or air-to-air weapons;

**Combat Support** Helicopters equipped with area suppression or self-defence weapons, but without an integrated fire control and aiming system;

**Assault** Armed helicopters designed to deliver troops to the battlefield.

**Transport Helicopters** The term describes unarmed helicopters designed to transport personnel or cargo in support of military operations.

---

### DEFENCE ECONOMICS

---

Entries in **Part II** show defence expenditures, selected economic performance indicators and demographic aggregates. Part II also contains an international comparison of defence expenditure and military manpower, giving expenditure figures for the past three years in per capita terms and as a % of GDP. The aim is to provide an accurate measure of military expenditure and of the allocation of economic resources to defence. All country entries are subject to revision each year, as new information, particularly that regarding defence expenditure, becomes available. The information is necessarily selective.

Individual country entries show economic performance over the past two years, and current demographic data. Where these data are unavailable, information from the last available year is provided. Where possible, official defence budgets for the current year and previous two years are shown, as well as an estimate of actual defence expenditures for those countries where true defence expenditure is thought to be considerably higher than official budget figures suggest. Estimates of actual defence expenditure, however, are only made for those countries where there is sufficient data to justify such a measurement. Therefore, there will be several countries listed in *The Military Balance* for which only an official defence budget figure is provided but where, in reality, true defence-related expenditure is almost certainly higher.

All financial data in the country entries are shown both in national currency and US dollars at current year, not constant, prices. US dollar conversions are generally, but not invariably, calculated from the exchange rates listed in the entry. In a few cases, notably Russia, a US dollar purchasing power-parity (PPP) rate is used in preference to official or market-exchange rates.

### Definitions of terms

Despite efforts by NATO and the UN to develop a standardised definition of military expenditure, many countries prefer to use their own definition (which are often not made public). In order to present a comprehensive picture, *The Military Balance* lists three different measures of military-related spending data.

- For most countries, an official defence budget figure is provided.
- For those countries where other military-related outlays, over and above the defence budget, are known, or can be reasonably estimated, an additional measurement referred to as defence expenditure is also provided. Defence expenditure figures will naturally be higher than official budget figures, depending on the range of additional factors included.
- For NATO countries, an official defence budget figure as well as a measure of defence expenditure (calculated using NATO's definition) is quoted.

NATO's definition of military expenditure, the most comprehensive, is defined as the cash outlays of central or federal government to meet the costs of national armed forces. The term 'armed forces' includes strategic, land, naval, air, command, administration and support forces. It also includes paramilitary forces such as the *gendarmerie*, the customs service and the border guard if these forces are trained in military tactics, equipped as a military force and operate under military authority in the event of war. Defence expenditures are reported in four categories: Operating Costs, Procurement and Construction, Research and Development (R&D) and Other Expenditure. Operating Costs include: salaries and pensions for military and civilian personnel; the cost of maintaining and training units, service organisations, headquarters and support elements; and the cost of servicing and repairing military equipment and infrastructure. Procurement and Construction expenditure covers national equipment and infrastructure spending, as well as common infrastructure programmes. It also includes financial contributions to multinational military organisations, host-nation support in cash and in kind, and payments made to other countries under bilateral agreements. R&D is defence expenditure up to the point at which new equipment

can be put in service, regardless of whether new equipment is actually procured. Foreign Military Aid (FMA) contributions of more than US\$1 million are also noted.

For many non-NATO countries the issue of transparency in reporting military budgets is a fundamental one. Not every UN member state reports defence budget (even fewer real defence expenditures) data to their electorates, the UN, the IMF or other multilateral organisations. In the case of governments with a proven record of transparency, official figures generally conform to the standardised definition of defence budgeting, as adopted by the UN, and consistency problems are not usually a major issue. The IISS cites official defence budgets as reported by either national governments, the UN, the OSCE or the IMF.

For those countries where the official defence budget figure is considered to be an incomplete measure of total military related spending, and appropriate additional data is available, the IISS will use data from a variety of sources to arrive at a more accurate estimate of true defence expenditure. The most frequent instances of budgetary manipulation or falsification typically involve equipment procurement, R&D, defence industrial investment, covert weapons programmes, pensions for retired military and civilian personnel, paramilitary forces and non-budgetary sources of revenue for the military arising from ownership of industrial, property and land assets.

The principal sources for economic statistics cited in the country entries are the IMF, the Organisation for Economic Cooperation and Development (OECD), the World Bank and three regional banks (the Inter-American, Asian and African Development Banks). For some countries basic economic data are difficult to obtain. This is the case in a few former command economies in transition and countries currently or recently involved in armed conflict. The Gross Domestic Product (GDP) figures are nominal (current) values at market prices. GDP growth is real not nominal growth, and inflation is the year-on-year change in consumer prices. Two different measures of debt are used to distinguish between OECD and non-OECD countries: for OECD countries, debt is gross public debt (or, more exactly, general government gross financial liabilities) expressed as a proportion of GDP. For all other countries, debt is gross foreign debt denominated in current US dollars. Dollar exchange rates relate to the last two years plus the current year. Values for the past two years are annual averages, while current values are the latest monthly value.

### **Calculating exchange rates**

Typically, but not invariably, the exchange rates shown in the country entries are also used to calculate GDP and defence budget and expenditure dollar conversions. Where they are not used, it is because the use of exchange rate dollar conversions can misrepresent both GDP and defence expenditure. For former communist countries, PPP rather than market exchange rates are sometimes used for dollar conversions of both GDP and defence expenditures, and this is marked.

The arguments for using PPP are strongest for Russia and China. Both the UN and IMF have issued caveats concerning the reliability of official economic statistics on transitional economies, particularly those of Russia and some Eastern European and Central Asian countries. Non-reporting, lags in the publication of current statistics and frequent revisions of recent data (not always accompanied by timely revision of previously published figures in the same series) pose transparency and consistency problems. Another problem arises with certain transitional economies whose productive capabilities are similar to those of developed economies, but where cost and price structures are often much lower than world levels. PPP dollar values are used in preference to market exchange rates in cases where using such exchange rates may result in excessively low dollar-conversion values for GDP and defence expenditure data.

### **Demographic data**

Population aggregates are based on the most recent official census data or, in their absence, demographic statistics taken from *World Population Projections* published annually by the World Bank. Data on ethnic and religious minorities are also provided under country entries where a related security issue exists.

## United States

---

### US SECURITY AND DEFENCE POLICY

---

The US defence and security establishment is further developing the initiatives announced in the September 2001 Quadrennial Defense Review, which attempted to shift defence thinking away from the existing 'threat-based' model to a forward-looking 'capabilities-based' approach. (See *The Military Balance* 2002•2003, pp. 12–16.) Key to this has been the 'transformation' of the US military to a more agile, deployable military force, as well as the institution of certain organisational reforms, which have included expansion of Special Operations Command.

However, the immediate focus has been on the maintenance of troop levels and operational tempo in the two main theatres where substantial US forces remain deployed on operations: Afghanistan and Iraq. Both countries continue to demand large troop commitments, leading to claims that the US military is suffering from overstretch. Though the impact of this is subject to debate, the administration has let the army's full strength rise above its authorised level as soldiers are suffering from a shortening in the deployment cycle, and there is little doubt that there is a particularly high call on expertise in 'high-demand/low-density' skill areas. Nevertheless, despite its operational commitments, the US is keen to show the world that it can still project considerable force globally and at short notice. Thus, in July 2004, seven carrier strike groups deployed simultaneously to, or were activated in, different areas of the world.

Moreover, despite its overseas commitments, the Department of Defense continues to press ahead with the Unified Command Plan and the Global Posture Review (See *The Military Balance* 2003•2004, pp. 12–13). New locations for basing are being sought in Africa, Europe and Asia and new concepts for projecting force are being examined. Meanwhile, in order to enhance security as it relates directly to US territory, the Department of Homeland Security has further developed a number of projects, in concert with other agency and interagency initiatives.

---

### OPERATIONAL DEPLOYMENTS

---

Following *Operation Iraqi Freedom* and the 28 June 2004 transfer of sovereignty to the interim Iraqi administration, the US continues to deploy some 121,600 troops in a stabilisation role across areas of Iraq. On 9 August, US forces assumed responsibility for two of the provinces that had previously come under the remit of the Polish-led Multinational Division Centre-South, namely Qadisiya and Najaf. US forces have retained the freedom of movement to engage in offensive operations designed to neutralise insurgent and terrorist threats. With these threats and attacks persisting, it is probable that US troops will remain in Iraq for some time to come. Drawdowns will likely occur in tandem with any increase in numbers and effectiveness of domestic security structures.

In **Afghanistan**, the United States maintains approximately 18,000 personnel, most of which are involved in *Operation Enduring Freedom*, which has as its objective the location, death or capture of Taliban and al-Qaeda fighters, largely in the south of the country (see pp. 141–142). While a \$25 billion supplemental bill was passed in Congress to fund operations in Afghanistan and Iraq, questions and debate are likely to continue over the amount, method, and distribution of funding provided for military operations and reconstruction in these two countries. Indeed, this supplemental is still subject to final Congressional approval as part of the National Defense Authorization Act, which Congress is unlikely to oppose.

---

### COUNTER-TERRORISM AND HOMELAND SECURITY

---

Notwithstanding the great deal of attention being paid to armed forces' restructuring (see over) and 'transformational' new technologies in a bid to increase operational flexibility, progress has continued on a

number of large-scale defence projects. Among these are the air force's F-22 and multi-service F-35 Joint Strike Fighter, the army's Future Combat System, the navy's DD(X) destroyer and Littoral Combat Ship (LCS), and missile defence.

As part of its development work on requirements for future littoral maritime operations, the US Navy has awarded contracts to two American manufacturers to construct up to two LCS prototypes designed by the navy – one a monohull, the other a trimaran. These ships are to be fast and versatile, being capability rather than platform-centric. It is planned that they will be able to embark different weapons and sensors according to the mission.

---

## OVERSTRETCH AND TRANSFORMATION

---

To provide a temporary solution to overstretch, the Pentagon used special powers granted by Congress to boost force levels by around 30,000 above the current authorised total of 1,390,500. Operations in Iraq in particular have shown that the US military lacks the necessary quantity of personnel with the skills needed in those tasks which have dominated operations in the post-conflict phase. Crucially, the deficiency in policing and prisoner handling has brought to public attention problems that are now well-documented. Attempts to rectify this situation by the mobilisation of 123,358 members of the US Army Reserve and Army National Guard (as of 4 August) as well as civilians from private military companies have not solved the problem. Within the armed forces, the skills shortage is being addressed during 2004 and 2005 by redirecting some 20,000 military personnel away from tasks that could be performed by civilians and into roles such as military policing, special operations, and civil affairs. Coupled with redistributions involving reserves as well as active forces, a total of 50,000 personnel will have been re-roled by the end of next year. Donald Rumsfeld, the Secretary of Defense, has stated that improvements in internal interoperability will also increase efficiency and mitigate the current force availability problem.

While the Department of Defense has said it is content with the existing force ceiling, Congress remains sceptical, and in June 2004 both the House of Representatives and the Senate included in their defence authorisation bills an increase in the statutory limits on the military's active-duty end strength. Current plans would place the primary increase in the army, involving approximately 30,000 more troops than its current level of 482,400 (analysts have pointed out that the army's full strength has in any case risen to just over 500,000 in the last two years). They would also raise the end strength of the marine corps by about 9,000, to 184,000, while decreasing the navy's establishment by 7,900, to 368,850.

Two decisions in particular, both announced by the Pentagon in June 2004, were used to justify the call for more troops: the Pentagon's 'stop-loss, stop-move' announcement that all army soldiers in Iraq or Afghanistan will have to extend their active duty until their unit's return; and the decision to recall 5,600 of the army's regular reservists (termed the Individual Ready Reserve) for one-year tours. Debate over the size and use of the armed forces is likely to continue as growing deficits and continued military operations and transformation produce conflicting pressures in Congressional budgetary debates.

While restructuring and personnel re-distribution continues in response to the problems highlighted by current operations, the emphasis on transformational issues has been maintained. This year's budget request included over \$4 billion for transformation programmes, also covering an increase, by 2006, in the number of deployable combat brigades from 33 to 43. It is intended that brigades, rather than divisions, become the basic operational combat unit (with a concomitant expansion in the Brigade Combat Team (BCT) concept). However, the scope of this shift will necessitate the provision, to brigades, of the requisite integral support elements that will enable them to operate independently of divisional formations, including communications, transportation, and engineering support. This has been achieved in the 3rd Inf Div (Mech) where a Brigade Troops Battalion (Bde Tps Bn) provides a diverse range of missions including signals and military intelligence and also commands additional combat and combat support units (infantry, armour, engineer, air defence etc) in support of the Brigade Unit of Action mission.

### GLOBAL FORCE POSTURE REVIEW CHANGES

---

The emphasis on improving rapid and flexible power projection capability also continues through the Pentagon's Global Posture Review, which examines the global distribution of US forces and facilities. Currently, an estimated 400,000 American service personnel are deployed in 120 countries outside the continental US. The goal of the review is to achieve a structure which allows forces to deploy anywhere in the world in 10 days, defeat their enemy in 30 days and be ready to fight again within another 30, with many coming from the continental US. Therefore, new options for forward operating bases are being examined in strategic areas. The US desire to improve versatility and mobility in its forces can be seen in the concept of sea basing. Rather than having ground-based 'mini-cities', the so-called 'lily-pads' will be positioned at sea as bases from which operations can be mounted. In addition to the 'lily-pad' concept there will be a global land-based infrastructure. Firstly, main operating bases – permanently stationed forces with families. Secondly, there will be forward operating bases with equipment pre-positioned. And thirdly, cooperative security locations, which are 'more austere' facilities for training, exercise and liaison.

Although some forces based overseas have already been redeployed, and discussions are ongoing over a number of potential future base locations, final decisions concerning the re-deployment of forces based overseas depends partly on the findings of a **Base Realignment and Closure (BRAC)** Commission which will examine the location and structure of domestic US basing. A June 2004 vote by the House of Representatives to delay BRAC for two years may slow down the Pentagon's worldwide military review past its scheduled completion date of autumn 2005. President Bush, in formally announcing some details of the redeployment plan on 16 August 2004, stated that the changes would take place over ten years, and a Pentagon official noted that the actual return of force structures would not begin until FY2007 through to FY2010.

In **South Korea**, the US notified Seoul, on 17 May 2004, of plans to remove 12,500 troops from South Korea by the end of 2005. This followed last year's announcement that the 'tripwire' force of 18,000 based north of the Han river (including most of the US forces at Yongsan garrison in Seoul) would move south of the capital. In July, the US confirmed that – as noted in last year's *Military Balance* – the Seoul-based troops would move to the Pyongtaek area, south of the Han river; the date for completion was noted as December 2008. This reduction in troop numbers, the largest since the 1970s, began with the transfer of 3,600 troops of the 2<sup>nd</sup> Brigade, 2<sup>nd</sup> Infantry Division to Iraq in the middle of the year. At the same time the US is implementing last year's announced reduction in its presence along the De-Militarized Zone (DMZ), leaving South Korean troops comprising 93% of the border force, compared to 65% previously. To compensate for the withdrawal and to maintain a strong security presence on the peninsula, the US is investing \$11bn in force upgrades and capability enhancements, including the deployment of *Patriot* missile systems, *Apache* helicopters, UAVs, communications, and *ISTAR* equipment. Moreover, the deployment of a squadron of F-117 *Nighthawk* stealth fighter-bombers from New Mexico's Holloman Air Force base to Kunsan airbase in South Korea from July to September 2004, demonstrated Kunsan's ability to handle such advanced aircraft.

In a further move to bolster the overall US presence and capability in Asia, further ships and bomber aircraft will be moved to **Guam**, enabling American forces to respond quickly to potential crises in Korea and the Taiwan Strait. The US already rotates B-2 stealth bombers through Andersen Air Force Base, in addition to the tanker and airlift capabilities that the base hosts, while the Apra Harbor facility has the capability to take vessels the size of aircraft carriers. Forces in Guam may include up to six submarines in addition to the three nuclear-powered SSNs already deployed. A carrier group may also be moved to Hawaii, although this may depend on the outcome of the BRAC process.

The US will also bolster its presence in **Australia**. On 8 July the Australian Defence Ministry announced that the United States and Australia will be developing a Combined Joint Training Centre using facilities at

the Shoalwater Bay Training Area in Queensland, as well as the Bradshaw Training Area and Delamere Air Weapons Range in the Northern Territory. However, US officials have said there are no plans to permanently station US troops in Australia. Meanwhile, in February, three marine battalions re-deployed from Okinawa to Iraq. However, this is likely to be a temporary move as Washington has said that no major changes are likely to the 47,000-strong presence in **Japan**.

In the Gulf, the United States completed withdrawal of troops from **Saudi Arabia's** Prince Sultan air base in September 2003, leaving a group of 500 military advisers to train the Saudi National Guard. To replace Prince Sultan, the al-Udeid Air Base in **Qatar** has become the main American military air operations centre in the region. In **Turkey**, following the end of *Operation Northern Watch*, the 4,000-strong troop contingent were withdrawn and Incirlik has become a transit location for US forces.

In Europe, plans to reduce the 70,000-strong US force in **Germany** and open new facilities in east and south-eastern Europe have led to the examination of basing options in **Romania, Poland, and Bulgaria** with the likelihood of the new locations being used as forward operating bases rather than as permanent garrisons. Moreover, the 1st Armored Division and the 1st Infantry Division (Mechanized), currently in Germany, will move to the continental US to be replaced by a Stryker Brigade Combat Team. Further, the headquarters of US Naval Forces Europe is to move from the **UK** to Naples, **Italy**.

Africa has assumed increasing strategic importance for the US as efforts to counter transnational terrorism increase. The United States has followed up its 1,200-strong troop presence in **Djibouti** with supply arrangements in **Senegal, Ghana, Gabon, Uganda, Zambia, and Namibia**, and EUCOM is considering setting up an anti-terrorism centre in **Algeria**. US forces have also been engaged in training forces from Chad, Niger, Mauritania and Mali in counter-terrorist-related capabilities under the Pan-Sahel initiative, which is led by EUCOM. The overall purpose is to forestall the Sahara region from becoming a terrorist bolthole, by improving the capacities of domestic defence forces. In 2004, Exercises have been held in Chad and Mali (see p. 224). The US has stated that it has no plans for main operating bases in Africa or Latin America.

---

## UNIFIED COMMAND PLAN (UCP)

---

The new Northern Command (NORTHCOM) became fully operational in September 2003. Having responsibility for homeland defence and civil support, NORTHCOM practiced, from February 19–25 *Exercise Unified Defense 2004*, its response to a variety of incidents, ranging from a hurricane to a nuclear detonation, to domestic terrorist attack. The exercise included around 50 local, state, and federal agencies, testing NORTHCOM's ability to provide military assistance to domestic agencies. It served to underscore Washington's desire to integrate all aspects of national response into a comprehensive homeland security and defence framework. An additional revision to the Unified Command Plan (which led to NORTHCOM's formation – see *The Military Balance 2003•2004* pp. 12, 14) followed in March 2004, when Syria and Lebanon were moved into CENTCOM's area of operations. Officials say these countries are more politically and culturally aligned with others in CENTCOM. Israel, meanwhile, remains in EUCOM.

---

## MISSILE DEFENCE

---

The Missile Defense Agency (MDA) appears to be on track with plans to deploy a test bed of interceptor vehicles in September or early October 2004. There will be 10 ground-based interceptors in Alaska and 10 in California. The first interceptor boost vehicle for the Ground-based Midcourse Defense (GMD) system was installed into an underground silo at Fort Greely, Alaska, on 22 July 2004. Orbital Sciences Corporation is on schedule to meet MDA's goal of deploying up to 10 operational interceptors by the end of 2004 and up to 20 operational interceptors by the end of 2005. The current plan calls for 16 to be deployed at Fort Greely, and up to four to be deployed at Vandenberg AFB, Ca, by the end of next year.

---

### MARITIME FORCE PROJECTION DEVELOPMENT

---

In *Exercise Summer Pulse 04*, which ran from early June to late August 2004, the US Navy tested its new concept of operations, *Sea Power 21* (see *The Military Balance* 2003•2004 pp. 16–17) and demonstrated its ability to provide credible combat power across the globe by simultaneously deploying seven aircraft carrier strike groups (CSGs) to operate in five theatres with other US, allied, and coalition forces. The exercise was the first under the new Fleet Response Plan (FRP), which embraces new ways of operating, training, manning and maintaining the fleet in order to increase force readiness and generate the necessary combat power to respond to a variety of potential crises. The FRP concept is based on having six CSGs at no more than 30 days notice to support contingency operations around the globe, with two additional CSGs at 90 days' readiness to act either as reinforcements or to replace previously deployed CSGs. Maintaining interoperability with allies and coalition partners is a secondary aim.

---

### HOMELAND SECURITY

---

Following the publication of the report of the National Commission on Terrorist Attacks upon the United States (the 9/11 commission), President Bush announced – on 2 August – a revision of the overall structure of the US intelligence community. He asked Congress to create a new post of National Intelligence Director, who would 'serve as the president's principal intelligence advisor [and would] oversee and coordinate the foreign and domestic activities of the intelligence [community]'. The president also stated an intention to establish a National Counter-Terrorism Center. This is intended to 'coordinate and monitor counter-terrorism plans and activities of all government agencies and departments'. The director of the NCTC will report to the National Intelligence Director.

The **Department of Homeland Security (DHS)** spent much of its first year dealing with organisational challenges, inter-agency communications, and the development of new initiatives, with the goal of creating a seamless single department. Outside the department, the **Homeland Security Council** continues to coordinate between DHS and other federal departments, such as the Department of Justice and the Department of Transportation.

As an indication of the high priority afforded to homeland security, the DHS received a higher increase in its research and development budget than any other department. But this also indicates the effort that is deemed necessary to correct deficiencies noted by the 9/11 commission, which noted that the coordination of information between law enforcement and intelligence personnel was a particular problem area. Although DHS is working to streamline all the processes that are deemed necessary to ensure the most effective homeland defence, the organisational and administrative challenges faced by the department were underlined on 27 April when the Chairman of the House Select Committee on Homeland Security reported that nearly 85% of terrorism preparedness grants distributed in FY2003 (out of a \$5.2 billion total) have yet to be used by the states and localities to which they were allocated.

Notwithstanding these problems, efforts continued on a number of levels to develop and integrate plans involving federal, state, and local authorities as well as the private sector to combat various perceived threats. For example, on 8 July, DHS stood-up its new **Homeland Security Operations Center (HSOC)**, which incorporates 26 federal and local law enforcement and intelligence entities into a single warning system. HSOC network uses the **Homeland Security Information Network** 'internet-based counterterrorism coordination tool' to provide a link between DHS and states and localities, while through the **National Infrastructure Coordination Center**, HSOC began involving private sector industry representatives in infrastructure protection measures in May 2004, furthering the goal of seamless and coordinated defence.

Following the establishment of the Terrorist Threat Integration Center (TTIC), an interagency body under the Director of Central Intelligence, there is now a **Terrorist Screening Center (TSC)** administered

by the FBI. TSC expects to have a watch-list database by the end of 2004 providing information on US citizens and foreigners to border and law enforcement personnel. Information sharing between and within agencies and infrastructure protection is a key objective, and this is intended to be facilitated by such measures as a real time counter-terrorism communications network as well as the creation of a **Unified National Database of Critical Infrastructure**. Other priorities include: communications and equipment interoperability; new technologies and tools to detect nuclear, biological, and chemical threats; community preparation and coordination of plans and procedures through a **National Incident Management System**; improved assistance to immigrants (including three pilot programmes); and continued departmental modernisation in terms of management and technology.

Biological security threats are also an area of concern for the DHS. Following last year's BioShield project, 2004 saw President Bush call for increased collection and analysis of bioterror attacks during the presentation of a presidential directive entitled **Biodefense for the 21<sup>st</sup> Century**. Meanwhile, the **BioWatch** programme monitors the air over major cities, the **Biosurveillance Initiative** involves agencies in building a biological threat detection system, and the National Institute of Health has accelerated research on vaccines and other countermeasures.

Reviews of border security have continued, and the United States Visitor and Immigrant Status Indicator Technology (**US VISIT**), intended to track non-immigrant visa holders is now operating in 115 airports and 14 seaports. The biometric capability of the programme has identified 107 people since 5 January 2004 who were either wanted for crimes or were previously deported. To strengthen border security, DHS is working to expand US VISIT and implement **Free and Secure Trade (FAST)** lanes to expedite legitimate border travel and commerce. On the enforcement side, plans are underway to conduct joint border operations and deploy Unmanned Aerial Vehicles (UAVs) along the US land border with Mexico. In the air, the US and EU formalised the **Passenger Name Records (PNR)** sharing agreement in May, while the Transportation Security Administration announced a pilot of the **Registered Traveler Program**, intended to expedite security processes for low-risk passengers, and the **Computer Assisted Passenger Prescreening System II (CAPPs II)** to authenticate passenger identity and perform risk assessments.

In the maritime arena, DHS is in the process of reviewing domestic and foreign vessel security plans and completing port security assessments. The **Maritime Transportation Security Act (MTSA)**, designed to harden physical infrastructure, restrict port facility access and establish vessel security procedures went into effect on 21 June. Under MTSA, the Coast Guard and Customs and Border Protection Directorate will implement stringent multi-layered standards to protect cargo in three stages: when it is overseas; in transit; and in the US. The **Container Security Initiative (CSI)** (See *The Military Balance* 2003•2004 p. 16) has also been keenly pursued. The CSI targets only US-bound maritime cargo and has shifted the location of cargo inspections from the point of arrival to the point of departure. From its current operational capacity at 17 ports, CSI is scheduled to expand to 14 additional foreign ports to give a total of 31 ports, selected on the basis of volume, location and strategic concern. DHS estimated that with this expansion, nearly 80% of all cargo containers destined for the United States will be pre-screened prior to departure. However, there is some criticism that CSI limits its effectiveness by its exclusivity and would benefit from more widespread application.

On a broader level, the **Proliferation Security Initiative (PSI)** (see *The Military Balance* 2003•2004 p.12) is intended to interdict movements of WMD material and contraband that originate from, or are destined for, countries or non-state actors of 'proliferation concern'. The Statement of Interdiction Principles was signed by 11 nations on 4 September 2003. By 1 June, the core group had grown to 17, and the State Department announced that a total of over 60 countries had signalled interest in supporting PSI activities. Eight nations hosted a series of ten ground, naval and air exercises between September 2003 and June 2004 (see pp. 22–23). In addition, the US effort to negotiate bilateral boarding and inspection deals with major shipping nations led to agreements with Liberia in February and Panama in June.

Table 1 Selected US Military Training Events 2003–04

Operation/Exercise Date	Location	Aim	Principal Participants/Remarks
Black Sea exercise Jul 2003	Black Sea	Interoperability and humanitarian missions	Bulgaria, Greece, Romania, Turkey, Ukraine, US
CARAT 03 Jul 2003	South China Sea	AAW, ASuW, ASW, diving and salvage interoperability	Brunei, Malaysia, Singapore, US
<i>Reliant Mermaid</i> VI Aug 2003	Eastern Mediterranean	SAR, interoperability and humanitarian missions	Israel, Turkey, US (with military monitors from Egypt, Israel, Jordan & US)
<i>Red Flag</i> Aug 2003	US	Air combat	Canada, Germany, Israel, UK, US (this is illustrative of a number of similar Red Flag exercises that take place throughout the year)
<i>Pacific Protector</i> 03 Sep 2003	Pacific/Eastern Australia	PSI	Australia (lead nation), France, Japan, US
<i>Malabar</i> 03 Oct 2003	Arabian Sea	Interoperability	India, US
<i>Eagle III</i> Oct 2003	Argentina	Interoperability	Argentina, US
<i>Cope South</i> 03 Oct 2003	Bangladesh	Training, NEO	Bangladesh, US
<i>Talon Vision</i> Nov 2003	Philippines	Interoperability, combat readiness	Philippines, US
<i>Cope Tiger</i> 2004 Dec 2003–Feb 2004	Singapore, Thailand	C2, Interoperability	Singapore, Thailand, US
<i>Sea Saber</i> 04 Jan 2004	Arabian Sea	PSI	Australia, France, Italy, Singapore, Spain, UK, US (with military observers from Denmark, Germany, Japan, Netherlands and Turkey)
<i>Cope India</i> Feb 2004	India	Air combat	India, US
<i>Balikatan</i> 04 Feb–Mar 2004	Philippines	Counter-insurgency/counter-terrorism	Philippines, US

Table 1 Selected US Military Training Events 2003–04

Operation/Exercise Date	Location	Aim	Principal Participants/Remarks
<i>Cobra Gold</i> 04 May 2004	Thailand	Interoperability, combat readiness, NEO, disaster relief	Mongolia, Philippines, Singapore, Thailand, US
JTFEX/ <i>Rapid Alliance/Aurora</i> 04 Jun 2004	Western Atlantic/ US East Coast	Expeditionary operations/ deployment of high readiness maritime task force	France, Germany, Netherlands, UK, US
US/Singapore exercise Jun 2004	Singapore area/ South China Sea	AAW, ASuW, ASW interoperability	Singapore, US
RIMPAC 04 Jun–Jul 2004	Pacific/Hawaii area	ASuW, ASW, humanitarian missions, medical	Australia, Canada, Chile, Japan, Peru, South Korea, UK, US
<i>Medshark/Majestic Eagle</i> Jul 2004	Western Mediterranean	Combined force operations and readiness	France, Germany, Italy, Netherlands, Portugal, Spain, Turkey, UK, US (with military observers from Greece)
<i>Summer Pulse</i> 04 Jun–Aug 2004	Worldwide (in all US Unified Command AORs)	To prove Fleet Response Plan (see p.18)	US Carrier Strike Groups (CSGs), based on US Ships <i>John C Stennis</i> , <i>George Washington</i> , <i>John F Kennedy</i> , <i>Harry S Truman</i> , <i>Enterprise</i> , <i>Kitty Hawk</i> and <i>Ronald Reagan</i>
<i>Active Endeavour</i> (continuous)	Mediterranean	Counter-terrorism operations	STANAVFORLANT, STANAVFORMED(FF/DD from all NATO nations, except Iceland and new members; not all countries have unit(s) permanently assigned).
<i>Pacific Protector</i> 04 Sep 2004	Pacific/Coral Sea	PSI	Australia, France, Japan, US
CTF-150 (continuous)	Horn of Africa/ Arabian Sea/ North Indian Ocean	Counter-terrorism operations	Australia, Canada, France, Germany, Greece, Italy, New Zealand, Pakistan, Spain, UK, US (other coalition countries contribute from time to time; not all countries have unit(s) permanently assigned).

### Canada

Criticism of underfunding in the Canadian armed forces has highlighted some deep-seated problems. The critique is principally aimed at equipment deficiencies leading to diminished deployability and capability. Particular issues surround obsolescent ground platforms such as *Leopard C2* MBTs and the M-113 armoured personnel carrier, an ageing fleet of aircraft requiring excessive maintenance and a lack of spare parts for the navy. Underlining these deficiencies is the fact that Canada spends less on defence as a percentage of GDP than the average expenditure of the European members of NATO. Following the elections on 28 June, it is hoped that the new government will rectify some of these deficiencies. Notwithstanding these equipment and funding issues, Canada's expertise in low-intensity and Peace Support Operations (PSO) remains an example to many other nations. This expertise was demonstrated by Canada's leadership of ISAF in Afghanistan, where Lt. Gen. Rick Hillier commanded the 6,100-strong ISAF forces until handing over to Lt Gen Jean-Louis Py (the French commander of EUROCORPS). In ISAF, the Canadians have the largest contingent with 1,900 troops participating in *Operation Athena*. A total of some 3,500 Canadian troops are deployed on PSO worldwide; the army's total strength is 19,300.

## United States US

Updated data is tinted

### Total Armed Forces

**ACTIVE** 1,433,600

(plus 158,156 National Guard and Reserve excl Coast Guard)

**RESERVES** 1,162,250

(incl Stand-by Reserve)

**READY RESERVE** 1,140,750

Selected Reserve and Individual Ready Reserve to augment active units and provide reserve formations and units

**NATIONAL GUARD** 460,050

**Army (ARNG)** 351,350 **Air Force (ANG)** 108,700

**RESERVE** 680,700

**Army** 324,100 **Navy** 152,850 **Marines** 92,000

**Air Force** 111,750

**STAND-BY RESERVE** 21,500

Trained individuals for mob **Army** 700 **Navy** 2,500 **Marines** 700 **Air Force** 17,600

### US Strategic Command (US STRATCOM)

HQ: Offutt AFB, NE (manpower incl in Navy and Air Force totals)

**NAVY** up to 432 SLBM in 18 SSBN

(Plus 16 *Poseidon* C-3 launchers in one op ex-SSBN redesignated SSN (32 msl), START accountable)

**SSBN** 18 *Ohio*

10 (SSBN-734) with up to 24 UGM-133A *Trident* D-5 (240 msl)

8 (SSBN-726) with up to 24 UGM-93A *Trident* C-4 (192 msl)

#### AIR FORCE

**ICBM** (Air Force Space Command) 550

11 msl sqn

500 *Minuteman* III (LGM-30G)

50 *Peacekeeper* (MX; LGM-118A)

**AC** (Air Combat Command (ACC)):

114 active hy bbr

5 sqn (1 AFR) with 93 B-52H (56 combat ready, including 44 combat-coded and 12 dual-tasked)

2 sqn with 21 B-2A (16 combat ready)

**FLIGHT TEST CENTRE** 3

2 B-52, 1 B-2

### Strategic Recce/Intelligence Collection (Satellites)

**IMAGERY** Improved *Crystal* (advanced KH-11)

visible and infra-red imagery (perhaps 3 op, resolution 6in)

*Lacrosse* (formerly *Indigo*) radar-imaging sat (resolution 1–2m)

**ELECTRONIC OCEAN RECCE SATELLITE** (EORSAT) to detect ships by infra-red and radar

#### NAVIGATIONAL SATELLITE TIMING AND RANGING

(NAVSTAR) 24 sat, components of Global Positioning System (GPS); block 2R system with accuracy to 1m replacing expired sat

**ELINT/SIGINT** 2 *Orion* (formerly *Magnum*), 2 *Trumpet* (successor to *Jumpseat*), 3 name n.k., launched Aug 1994, May 1995, Apr 1996

**NUCLEAR DETONATION DETECTION SYSTEM** detects and evaluates nuclear detonations; sensors to be deployed in NAVSTAR sat

### Strategic Defences

**North American Aerospace Defense Command**

(NORAD), a combined US–Ca org (HQ: Peterson AFB, CO)

#### EARLY WARNING

**DEFENSE SUPPORT PROGRAM (DSP)** infra-red surv and warning system. Detects msl launches, nuclear detonations, ac in after burn, spacecraft and terrestrial infra-red events. Approved constellation: 3 op sat and 1 op on-orbit spare

**BALLISTIC-MISSILE EARLY-WARNING SYSTEM (BMEWS)** 3 stations: Clear (AK), Thule (Greenland), Fylingdales Moor (UK). Primary mission to track ICBM and SLBM; also used to track sat

**SPACETRACK** USAF radars at Incirlik (Tu), Eglin (FL), Cavalier AFS (ND), Clear (AK), Thule (Greenland), Fylingdales Moor (UK), Beale AFB (CA), Cape Cod (MA); optical tracking systems in Socorro (NM), Maui (HI), Diego Garcia (Indian Ocean)

#### USN SPACE SURVEILLANCE SYSTEM

(NAVSPASUR) 3 transmitting, 6 receiving-site field stations in southeast US

#### PERIMETER ACQUISITION RADAR ATTACK CHARACTERIZATION SYSTEM (PARCS)

1 north-facing phased-array system at Cavalier AFS (ND); 2,800km range

**PAVE PAWS** phased-array radars in MA, GA; 5,500km range

#### MISCELLANEOUS DETECTION AND

**TRACKING RADARS** US *Army* Kwajalein Atoll (Pacific) USAF Ascension Island (Atlantic), Antigua (Caribbean), Kaena Point (HI), MIT Lincoln Laboratory (MA)

**GROUND-BASED ELECTRO-OPTICAL DEEP SPACE SURVEILLANCE SYSTEM (GEODSS)** Socorro, Maui (HI), Diego Garcia

## 24 North America Part I

### AIR DEFENCE RADARS

#### OVER-THE-HORIZON-BACKSCATTER

**RADAR (OTH-B)** 1 in ME (mothballed), 1 in Mountain Home AFB (mothballed); range 500nm (minimum) to 3,000nm

**NORTH WARNING SYSTEM** to replace DEW line 15 automated long-range (200nm) radar stations 40 short-range (110–150km) stations

**DEW LINE** system deactivated

### Army 502,000 (plus 131,630 ARNG and AR)

- 3 Army HQ, 4 Corps HQ (1 AB)
- 2 armd div (3 bde HQ, 5 tk, 4 mech inf, 3 SP arty bn; 1 MLRS bn, 1 AD bn; 1 avn bde)

- Special Operations Forces (see page 23)

### READY RESERVE

**ARMY NATIONAL GUARD (ARNG)** (351,350) capable after mob of manning 8 div (1 armd, 3 mech, 3 med, 1 lt inf) • 15 indep bde, (2 armd, 5 mech, 7 inf, 1 armd cav regt) • 17 fd arty bde HQ • 1 Scout gp • Indep bn: 1 inf, 42 arty, 32 avn, 11 AD (2 *Patriot*, 9 *Avenger*), 40 engr, 32 WMD-CST (Weapons of Mass Destruction – Civil Support Team)

### ARMY RESERVE (AR) (324,100)

7 trg div, 5 exercise div, 13 AR/Regional Spt Comd, 4 hel bn (2 AH-64, 2 CH-47), 3 hel coy (2 UH-60, 1 CH-47), 2 ATK ac bn  
(Of these, 206,000 Standing Reservists receive regular trg and have mob assignment; the remainder receive limited

trg, but as former active-duty soldiers could be recalled in an emergency.)

### EQUIPMENT

**MBT** some 7,620 M-1 *Abrams* incl M-1A1, M-1A2

**RECCE** 96 Tpz-1 *Fuchs*

**AIFV** 6,719 M-2/-3 *Bradley*

**APC** 14,300 M-113A2/A3 incl variants, 8600 *Stryker*

**TOTAL ARTY** 5,540

**TOWED** 1,547: **105mm**: 434 M-102, 416 M-119;

**155mm**: 697 M-198

**SP 155mm**: 2,087 M-109A1/A2/A6

**MRL 227mm**: 830 MLRS (all ATACMS-capable)

**MOR 120mm**: 1,076 M-120/121; plus **81mm**: 990 M-252

**ATGW** 8,724 TOW (incl 1,379 HMMWV, 626 M-901, 6,719 M-2/M-3 *Bradley*), 19,000 *Dragon*, 950 *Javelin*

**RL 84mm**: AT-4

**SAM** FIM-92A *Stinger*, 703 *Avenger* (veh-mounted *Stinger*), 95 *Linebacker* (4 *Stinger* plus 25mm gun), 483 *Patriot*

**SURV Ground** 98 AN/TPQ-36 (arty), 56 AN/TPQ-37 (arty), 60 AN/TRQ-32 (COMINT), 32 AN/TSQ-138 (COMINT), 5 AN/TSQ-138A **Airborne** 4 *Guardrail* (RC-12D/H/K/N/P/Q aircraft, 9 ARL (DHC-7)

(3 COMINT, 3 IMINT, 3 COMINT & ELINT)

**AMPH** 51 ships:

6 *Frank Besson* LST: capacity 32 tk

34 LCU-2000

11 LCU-1600

Plus craft: some 73 LCM-8

**UAV** 18 *Hunter* RQ-5A (6 in store), 24 *Shadow* **RQ-7A**, *Raven*

**AC** some 298: 46 **C-12C/R**, 90 **C-12D/F/J**, 3 **C-20**, 47 **C-23A/B**, 11 **C-26**, 2 **C-37**, 2 **C-182**, 2 **O-2**, 37 **RC-12D/H/K**, 12 **RC-12P/Q**, 3 **T-34**, 26 **UC-35**, 4 **UV-18A**,

1 **UV-20A**, 9 **RC-7**, 2 **C-31**, 1 **U-21**

**HEL** some 4,597 (1,133 armed): 370 **AH-1S**, 732

**AH-64A/D**, 36 **AH-6/MH-6**, 447 **UH-1H/V**, 1,484

**UH-60A/L/M**, 60**MH-60L/K**, 4 **UH-60Q**, 7 **HH-**

**60L**, 440 **MH/CH-47D**, 23 **MH-47E**, 463 **OH-58A/**

**C**, 375 **OH-58D**, 154 **TH-67** *Creek*, 2 **RAH-66**

### Navy (USN) 376,750 (plus 3,605 Naval Reserve)

(incl 59,200 women)

2 Fleet **Areas**: Pacific, Atlantic

Surface combatants divided into:

5 Fleets: **2nd** Atlantic, **3rd** Pacific, **5th** Indian Ocean, Persian Gulf, Red Sea, **6th** Mediterranean, **7th** W.

Pacific; plus Military Sealift Command (MSC), Naval Special Warfare Command, Naval Reserve Force (NRF)

### SUBMARINES 72

#### STRATEGIC SUBMARINES

**SSBN** 16

16 *Ohio*; 10 (SSBN-734) with up to 24 UGM-133A *Trident* D-5 (240 msl); 6 (SSBN-727) with up to 24 UGM-93A *Trident* C-4 (192 msl)

**TACTICAL SUBMARINES** 54 (incl about 8 in refit)  
**SSGN** 35

2 mod *Ohio* (SSGN 726, 728) with up to 154 *Tomahawk* LAM

2 *Seawolf* (SSN-21) with up to 45 *Tomahawk* LAM/ASSM plus 8 × 660mm TT (Mk 48 HWT)

23 imp *Los Angeles* (SSN-751) with 12 *Tomahawk* LAM/ASSM (VLS), 4 × 533mm TT (Mk 48 HWT, *Harpoon* ASSM)

8 mod *Los Angeles* (SSN-719) with 12 *Tomahawk* LAM/ASSM (VLS), 4 × 533mm TT (Mk 48 HWT, *Harpoon* ASSM)

**SSN** 21

20 *Los Angeles* (SSN-688) with 4 × 533mm TT (*Tomahawk* LAM/ASSM, *Harpoon* ASSM Mk 48 HWT)

1 *Sturgeon* (SSN-637) with 4 × 533mm TT (*Tomahawk* SLCM, Mk48 HWT)

**PRINCIPAL SURFACE COMBATANTS** 118

**AIRCRAFT CARRIERS** 12

**CVN** 9

8 *Nimitz* (CVN-68) (one in refit)

1 *Enterprise* (CVN-65)

**CV** 3

2 *Kitty Hawk* (CV-63)

1 *J. F. Kennedy* (CV-67)

**AIR WING** 11 (10 active, 1 reserve); average Air Wing comprises 9 sqn

3 with 12 F/A-18C, 1 with 14 F-14, 1 with 8 S-3B and 2 ES-3, 1 with 6 SH-60, 1 with 4 EA-6B,

1 with 4 E-2C, 1 spt with C-2

**CRUISERS** 27

**CG** 27 *Ticonderoga* (CG-47 *Aegis*)

5 *Baseline* 1 (CG-47-51) with 2 × 2 SM-2 MR SAM, 2 × 4 *Harpoon* SSM, 2 × 127mm guns, 2 × 3 ASTT (Mk 46 LWT), 2 SH-60B hel

22 *Baseline* 2/3/4 (CG-52) with 2 VLS Mk 41 (61 tubes each) for combination of SM-2 ER SAM, and *Tomahawk*; other wpns as *Baseline* 1

**DESTROYERS** 49

**DDG** 49

28 *Arleigh Burke* (DDG-51 *Aegis*) Flight I/II with 2 VLS Mk 41 (32 tubes fwd, 64 tubes aft) for combination of *Tomahawk* LAM/ASSM, SM-2 ER SAM and ASROC, 2 × 4 *Harpoon* SSM, 1 × 127mm gun, 2 × 3 ASTT (Mk 46 LWT)

11 *Arleigh Burke* (DDG-79 *Aegis*) Flight IIA, armament as above plus 2 SH-60B hel

10 *Spruance* (DD-963) with 2 VLS Mark 41 for combination of *Tomahawk* LAM/ASSM and ASROC, 2 × 4 *Harpoon* SSM, *Sea Sparrow* SAM, 2 × 127mm gun, 2 × 3 ASTT (Mk 46 LWT), 2 SH-60B hel

**FRIGATES** 30

**FFG** 30 *Oliver Hazard Perry* (FFG-7) (incl 8 in reserve) all with *Harpoon* SSM, 1 SM-1 MR SAM, 2 × 3 ASTT (Mk 46 LWT), 1 × 76mm gun; plus either 2 × SH-60 or 1 × SH-2F hel

**PATROL AND COASTAL COMBATANTS** 21

**PATROL, COASTAL** 13 *Cyclone* PFC with SEAL team, *Bushmaster* Mk96 stabilised gun

**PATROL, INSHORE** 8<

**MINE WARFARE** 26

**MINELAYERS** none dedicated, but mines can be laid from attack SSN, ac and surface ships.

**MINE COUNTERMEASURES** 26

2 *Osprey* (MHC-51) MHC (plus 10 *Osprey* in reserve) AN/SLQ-48 Mine Neutralization System (MNS); SQQ-32 (V) 2 Sonar; .50 cal machine gun

9 *Avenger* (MCM-1) MCO (plus 5 *Avenger* in reserve) AN/SLQ-48 Mine Neutralization System (MNS); SQQ-32 (V) 3 Sonar; .50 cal machine gun

**AMPHIBIOUS** 40

**LCC** 2 *Blue Ridge*, capacity 700 tp

**LHD** 7 *Wasp*, capacity 1,890 tp, 60 tk; with 5 AV-8B ac, 42 CH-46E, 6 SH-60B hel; plus 3 LCAC

**LHA** 5 *Tarawa*, capacity 1,900 tp, 100 tk; with 6 AV-8B ac, 12 CH-46E, 9 CH-53; plus 4 LCU

**LPD** 11 *Austin*, capacity 788 tp, 40 tk; 1 LCU or 1 LCAC, with 6 CH-46E hel; plus 1 LCU or 1 LCAC

**LSD** 15

8 *Whidbey Island*, capacity 500 tp, 40 tk; with 4 LCAC

4 *Harpers Ferry*, capacity 500 tp, 40 tk; with 2 LCAC

3 *Anchorage*, capacity 330 tp, 38 tk; with 3 LCAC

**CRAFT** about 200

72 LCAC, capacity 1 MBT; about 37 LCU-1610, capa-city 1 MBT; 8 LCVP; 75 LCM; plus numerous LCU

**COMBAT LOGISTICS** Force 5

1 *Supply* AOE with 3 CH-46E hel

4 *Sacramento* AOE with 2 CH-46E hel

**NAVAL RESERVE SURFACE FORCES** 23 (counted in the active totals)

8 FFG, 5 MCM, 10 MHC plus 45 NCW (MIUW, HDS, IBU) units

**NAVAL INACTIVE FLEET** about 28

3 CV, 2 BB, 4 DD, 5 LST, 5 LKA, 2 AO, 2 AF, 5 AG plus misc service craft

**MILITARY SEALIFT COMMAND** (MSC)

MSC operates about 120 ships around the world carrying the designation 'USNS' (US Naval Ships). They are not commissioned ships and are manned by civilians. Some also have small mil depts assigned to carry out specialised mil functions such as comm and

## 26 North America Part I

supply ops. MSC ships carry the prefix 'T' before their normal hull numbers.

### Naval Fleet Auxiliary Force 35

6 AE • 6 AF • 2 AH • 13 T-AO • 5 ATF • 3 T-AOE

### Special Mission Ships 25

1 T-AG • 1 T-ARC • 12 T-AGOS • 9 T-AGS • 2 T-AGM

### Prepositioning Program/Maritime Prepositioning Program 36

8 Army T-AKR • 4 Army T-AK • 4 USAF T-AK • 16 MPS T-AK • 1 USN T-AK • 3 DLA T-AOT

### Sealift Force 24

8 FSS T-AKR • 11 LMSRT-AKR • 5 T-AOT

## ADDITIONAL MILITARY SEALIFT

(crewed and maintained by US Maritime Administration, when activated, come under operational control of MSC)

### Ready Reserve Force (RRF) 78

(ships at readiness of 4/5/10/20 days)

31 T-AKR, 17 breakbulk T-AK, 10 T-ACS, 4 OPDS T-AOT, 5 T-AOT, 7 heavy lift T-AK, 2 T-AVB, 2 trp ships

### National Defense Reserve Fleet (NDRF) 49

39 breakbulk ships, 7 tkr, 3 heavy lift ships

## COMMERCIAL SEALIFT about 315

US-flag (198) and (117) effective US-controlled (EUSC) ships potentially available to augment mil sealift

## AUGMENTATION FORCES 13

13 Cargo Handling Bns (1 active, 12 reserve)

## NAVAL AVIATION 98,588

(incl 10,632 women)

incl 12 carriers, 11 air wg (10 active, 1 reserve) **Flying hours** F-14: 302; F-18: 372

Average air wg comprises 9 sqn

3 with 12 F/A-18C, 1 with 10 F-14, 1 with 8 S-3B, 1 with 6 SH-60, 1 with 4 EA-6B, 1 with 4 E-2C, 1 spt with C-2

## ORGANISATION

### AIRCRAFT

**Ftr** 12 sqn

4 with F-14A, 5 with F-14B, 3 with F-14D

**FGA/attack** 24 sqn

### PATROL VESSELS 132

#### OFFSHORE 43

12 *Hamilton* high-endurance with HH-60J LAMPS/HU-65A *Dolphin* hel, all with 76mm gun

13 *Bear* med-endurance with HH-65A hel

14 *Reliance* med-endurance with 25mm gun, hel deck

1 *Alex Haley* med-endurance

2 *Mature* med-endurance

plus 16 sea-going buoy tenders

#### COASTAL 89

49 *Farallon*, 40 *Barracuda*, plus 15 coastal buoy tenders

#### INLAND 36

13 inland construction tenders, 5 small inland buoy tenders, 18 small river buoy tenders

#### SUPPORT AND MISCELLANEOUS 25

3 polar icebreakers, 9 icebreaking tugs, 2 trg, 11 tugs

### AVIATION (3,730 incl 120 women)

**AIRCRAFT** 17 HU-25, 22 HC-130H, 2 C-130J, 1 G-5, 1 G-1

**HELICOPTER** 84 HH-65A/B, 35 HH-60J, 8 MH-68

### RESERVES 7,960 incl 1,150 women

## Air Force (USAF) 379,500 (plus 11,610 ANG and Air Force Reserve)

**Flying hours** ftr 189, bbr 260, tkr 308, airlift 343

**AIR COMBAT COMD (ACC)** 4 air forces, 23 ac wg  
Almost the entire USAF – active force, reserve force and ANG – is divided into 10 Aerospace Expeditionary Forces (AEFs). Each AEF is on call for 90 days every 15 months, and at least 2 of the 10 AEFs is on call at any one time. Each AEF, with 10,000–15,000 personnel, comprises approx 90 multi-role ftr and bbr ac, 31 intra-theatre refuelling ac and 13 ac for intelligence, surv, recce and EW missions.

**Tactical** 55 active ftr sqn (18–24 ac/sqn) in ACC, USAFE and PACAF, 11 with F-15, 6 with F-15E, 21 with F-16C/D, 6 with A-10/OA-10, 2 with F-117, 1 *Aggressor* with F-16C/D, 3 bbr sqn (non-STRATCOM Mission Capable) with B-1B

**FAC** 7 tac air control sqn, mixed A-10A/OA-10A

**SAR** 6 sqn with HH-60 and HC-130N/P

**RECCE** 3 sqn with U-2R and RC-135, 1 sqn with E-8 JSTARS

**UAV** 3 sqn with *Predator*, *Global Hawk* (in test)

**AEW** 1 Airborne Warning and Control wg, 6 sqn with E-3B/C

**EW** 2 sqn with EC-130

**AIR EDUCATION AND TRG COMMAND**

(AETC)

2 air forces, 11 ac wg

**TRG**

8 fg wg (T-1, T-6, T-37, T-38, AT-38, T-43)

26 mission trg (A/OA-10, C-5, C-17, C-21, C-41, C/HC/MC-130, E-3, F-15, F-16, C/KC-135, HH-60, UH-IN)

**TRIALS** (Test) weapons trg units with ac A-10, B-1, B-2, B-52, C-12, C-17, C-135, F-15, F-16, F-117, F-22, HH-60, C/KC-135, AC/NC-130, T-3, TG-10, T/AT-38, T-39, UH-IN, U-2**AIR MOBILITY COMD** (AMC) 2 air forces, 12 ac wg**TPT** 29 sqn12 strategic: 4 with C-5, 1 with C-141, 7 with C-17  
9 tac airlift with C-130

8 op sup units with C-9, C-12, C-20, C-21, C-37, C-40, VC-125, UH-1

### NATO

The debate over NATO's future role in a changing international environment has continued. On 12 February, during a speech at the IISS in London, Jaap de Hoop Scheffer, the new NATO Secretary General, stressed the continuing emphasis on the need to improve capabilities to meet new missions. He mentioned as cornerstones of this process the **NATO Response Force**, **Prague Capabilities Commitment**, and **Allied Command Transformation (ACT)**, which were dealt with at length in last year's *Military Balance* (pp. 29–30).

**Afghanistan** (see p. 142) is NATO's first out of area operation, and is a crucial test of the Alliance's ability to deliver new capabilities. On 11 August 2003, NATO assumed responsibility for the International Security Assistance Force (ISAF) in Kabul, which currently numbers around 6,500 troops drawn from 26 NATO allies, nine nations from the Euro-Atlantic Partnership Council, and two non-NATO, non-EAPC nations. This demonstrates NATO's unique capacity to command broad multi-national operations. In December 2003, NATO reached agreement to provide **Provincial Reconstruction Teams (PRTs)** in the north and west, and at the NATO Defence Ministers' summit in Belgium on 1 December, Norway, Spain, Belgium, and Romania agreed to send additional military contingents to Afghanistan; Sweden also offered to send around 20 troops under NATO command. On 31 December, the German PRT in Kunduz came under ISAF command, the first expansion of ISAF outside Kabul. However, internal arguments over transportation and financial support delayed further necessary reinforcements. Thus the main topic at NATO Istanbul summit in late June 2004 was how the Alliance could address the reluctance or inability of member states to meet the new missions. At the summit, undertakings were made to reinforce ISAF with 1,500 additional troops – which were to deploy to Afghanistan in time for the October 2004 elections, and to make a total of nine PRTs. Moreover, in **Iraq**, NATO agreed to help train the nascent Iraqi armed forces as well as take part in the maritime counterterrorism operation *Active Endeavour*. The summit also stated a commitment to strengthen the **Euro-Atlantic Partnership**, and to introduce two initiatives – the **Mediterranean Dialogue**, and the **Istanbul Cooperation Initiative**.

The continued inability to provide basic security in Afghanistan is principally due to a lack of military personnel. The reticence of member states to live up to their obligations highlights the political problems impeding NATO reform. Moreover, there is frustration in the US that less than 2% of the more than 2 million military personnel that comprise the forces of its European NATO allies are currently deployed on operations – including in the Balkans or Afghanistan.

In a bid to overcome problems of deployability and readiness in the Alliance, preparations continue for the **NATO Response Force (NRF)**, NATO's first standing integrated reaction force. The NRF was activated on 15 October 2003 at AFNORTH headquarters in Brunssum, and is scheduled to reach initial operational capability by October 2004 and be fully operational by October 2006 with 21,000 personnel (joint air, land, and maritime components) deployable within 5–30 days either independently, as a spearhead, or as part of a coalition.

To further enhance capability the Joint Warfare Centre (JWC) staged Exercise *Allied Action '03* in Istanbul in November for the Allied Force North Europe (AFNORTH) Combined Joint Task Force (CJTF) and Exercise *Allied Action '04* in June 2004, in Italy, for AFSOUTH's CJTF and NRF commands. By 2005, the JWC hopes to have introduced live exercises to complement its current simulated training. Plans are also underway to expand the JWC's operational-level training focus to tactical training for the NRF by January 2005.

The establishment of the NRF and JWC result from last year's reforms (see *The Military Balance* 2003•2004, p. 29) which included the setting up of **Allied Command Transformation (ACT)** and its

## 36 NATO Europe Part I

operational counterpart **Allied Command Operations (ACO)**. ACO controls the NRF programme, while ACT oversees not only the JWC, but the Joint Force Training Centre (JFTC) at Bydgoszcz in Poland and the Joint Analysis Lessons Learned Centre (JALLC) at Monsanto in Portugal.

In order to determine the requirements of 'new missions', NATO has been conducting a series of analytical activities which are intended to define the capabilities necessary for the future, and which should enable European nations to determine more accurately force requirements for national and collective defence. It is also hoped that through the medium of this analysis and ongoing transformation programmes, it will be possible to avoid any divergence between European nations and the US that could adversely affect capability.

Throughout the reform process, there has been a strong emphasis on achieving interoperability among NATO member states. Particular attention has been paid to command and control systems, as well as to networked platforms. At Istanbul, NATO endorsed the recommendation to proceed with the **Alliance Ground Surveillance System (AGS)**, the first major NATO procurement since AWACS in the 1970s. AGS, which parallels J-STARS in mapping ground movements and passing them on to battlefield commanders, has a transformational force-multiplying capability. If it proceeds on schedule, AGS will be operational in 2013, although it remains to be seen whether it will be a manned or un-manned programme.

In other cooperative projects, the air-surveillance system of the Baltic States, **Baltnet**, was integrated into NATO's Integrated Air Defence System on 7 April 2004. Data on Baltic airspace collected at the Regional Air Surveillance Coordination Center in Lithuania will be forwarded to NATO's joint operations centre in Germany.

Finally, the **NATO Chemical Biological Radiological and Nuclear (CBRN) battalion** became operational in July 2004. Inaugurated at a December 2003 ceremony in Prague, the battalion contains contingents from 13 nations and is led by the Czech Republic.

The intricate **Russia-NATO relationship** (see p. 100) of coordination and competition continues to evolve, though there are two areas of possible tension. The expansion of NATO up to the Russian borders, and NATO activity in the Caucasus are both issues which will shape the future of the relationship and future debate in the NATO–Russia Council (NRC). The NATO Secretary-General visited Russia in April to discuss the Alliance's cooperation with Moscow, as well as the impact of NATO expansion, on which Russia maintains a 'calmly negative' attitude. NATO's decision to base planes in Lithuania caused concern in Moscow. Nonetheless, President Putin decided to send Foreign Minister Lavrov to the April session of the Russia–NATO Council which included the new members. Lavrov also attended the Istanbul summit, where the future assistance programme to Georgia was laid out and where Russia was asked to fulfil its obligations to close its bases in Georgia. Portraying the issues so starkly frustrated the Russians, as it demonstrated that NATO does not regard the future of the bases as a bilateral matter between Georgia and Russia.

---

## EUROPEAN SECURITY AND DEFENCE POLICY (ESDP)

---

In a 12 November 2003 speech on the European Union's security and defence policy (ESDP), Secretary-General of the Council of the EU and High Representative for the Common Foreign and Security Policy (CFSP) Javier Solana stressed the need for 'preventive engagement' to counter threats and emerging crises. Several structural and operational measures have been undertaken to give the EU the capacity to meet those objectives. At the 12–13 December European Council summit in Brussels, progress was made on establishing ESDP structures, particularly two permanent planning cells, one attached to NATO HQ (SHAPE) and one within the European Military Staff (EUMS). At the same meeting, ministers approved a document detailing a European Security Strategy. *A Secure Europe in a Better World* is intended to identify threats to Europe and the EU's strategy for addressing them. The document stated that 'We need to develop a strategic culture that fosters early, rapid, and when necessary, robust intervention'.

The Council also agreed to establish an agency focusing on capabilities. In the first half of 2004, a small set-up team worked to establish the body's precise role. On 14 June 2004, foreign ministers gave formal approval for the establishment of the **European Defence Agency**, which is scheduled for full operational capability, with a staff of about 80, by the end of 2004. The agency will attempt several roles, including: assessing member states' capability goals and how best to meet them; judging progress in such efforts; encouraging cooperation on capabilities and armaments between member states; strengthening the industrial base and fostering technology research. Separately, the European Commission is proposing a significant expansion of funding available for security-related technology research. Finally, on 11 February 2004, **Germany**, the **UK** and **France**, announced plans for the formation of rapid reaction forces, to comprise 1,500-strong 'battle groups' with strategic airlift, artillery, communications and engineering support. These are expected to be ready for deployment in 2007 with a goal of being ready in under 15 days and the ability to stay in the field for at least 30 days but possibly for as long as four months.

---

## PEACEKEEPING

---

European nations continued to expand their participation in EU, NATO, UN and national peacekeeping missions. In 2003, the EU had a total of 55,960 troops (including military observers) deployed on UN and international peacekeeping missions, a number which excludes operations executed on a national basis. This figure compares with 46,312 in 2002. If participation by non-EU NATO members is included, around 70,000 European troops have been deployed on operations outside their common boundaries. For example, a majority of EU members have at some point contributed troops to ISAF in Afghanistan.

On 5 June 2003, the EU launched *Operation Artemis* in the Democratic Republic of the Congo (DRC). This mission, under French command, ended on 1 September 2003. Meanwhile, *Operation Concordia* in **Macedonia** began on 31 March 2003 and ended on 15 December 2003, when it became a police mission (*Operation Proxima*) scheduled for one year's duration. In December 2004, the EU will take over the peacekeeping mission in **Bosnia** under the Berlin-plus arrangement with NATO. On 9 December 2003, Belgium offered 190 troops to train the DRC army, and in March 2004, several European nations sent troops to **Liberia**, while further missions in the southern **Caucasus** and **Moldova** are under consideration. But the lack of strategic airlift continues to hamper Europe's potential to carry out peace support operations independent of the US. While commitments by France, Germany, and Spain to purchase the Airbus A400M will fill the gap in projection capabilities, these aircraft are not likely to be ready for use before late 2009. However, as part of its latest defence review, the UK indicated that even when the A400M enters service, it will also purchase its existing four leased C-17 *Globemaster* aircraft, plus one more.

The increased focus on expeditionary operations has prompted adjustment to many countries' force structures. On the naval front, this has resulted in a focus on Landing Helicopter Dock (LHD) vessels, while Italy has an LPD specifically outfitted for disaster relief and France has two with extensive medical facilities. Meanwhile, Spain is expanding its amphibious capability with a new Strategic Projection Ship (of LHD-type), and Norway is forming a Task Group intended to secure coastal access for landings in multinational crisis operations. Finally, Sweden is configuring its five *Visby*-class corvettes, which will be capable of multi-national trans-oceanic deployment in addition to their role in homeland defence.

---

## EUROPEAN REFORM ISSUES

---

Several European nations have taken steps to adapt their national militaries for flexibility and rapid response. In December 2003, the **UK's** Defence White Paper stated the need to direct force planning towards multiple concurrent smaller or medium-sized operations, since a large scale conventional attack on the UK is unlikely. The continuing need for interoperability with the US was also stressed, as was the increasing emphasis on the need to move to a network-enabled approach. Then in July the UK announced

### 38 NATO Europe Part I

wide-ranging defence reforms, designed to meet the demands of the concept of **Network Enabled Capabilities (NEC)** which seeks to integrate sensors, weapons, and decision-makers, and which will also demand greater integration between agencies. The July 2004 announcement, entitled *Delivering Security in a Changing World – Future Capabilities*, focused on reducing manpower and platforms, while concentrating on new systems for the future. The most contentious part of the reform programme is the reduction of the Infantry by four battalions, to a total of 36; this move was seen by critics as being a cost-cutting measure, or a measure to save money for technology enhancements, inappropriate at a time when the army is committed to large-scale manpower-intensive operations which are unlikely to decrease for some time.

Key technology enhancements are the **UAV Watchkeeper** programme, which will incorporate aspects of NEC as it develops, while the **Future Rapid Effects System (FRES)** family of vehicles, which will start entering service in 2007, will provide mobility and firepower for the army's new structure of three medium brigades, and one light brigade in addition to the existing air assault and commando brigades. Financial pressures, coupled with the perceived strategic necessity of evolution are likely, therefore, to direct funds away from legacy systems.

Meanwhile, **Germany** will be closing 100 military bases and reducing its military by 35,000 to 250,000, as well as converting a number of A310's into Multi-Role Transport Tankers (MRTT), to assist mobility.

Defence Command **Denmark** has prepared a document that is intended to produce smaller forces for international missions, while **the Netherlands** is transforming its force structure to improve flexibility, operational effectiveness and joint operations capability. **Hungary** is preparing an elite anti-terrorism unit, and the EU and **Italy** have developed a gendarmerie for out-of-area policing whose first unit is due to be ready this year. Italy is also adapting its military structure, and will end conscription by mid-2005.

The **Czech Republic** has abolished conscription, as has **Slovenia**, which aims to have fully professional forces by the end of 2005. Another new NATO state, **Slovakia**, which reduced its compulsory military service from nine months to six, is re-examining its remuneration system this year, and has set a goal of full professionalisation by end-2006. As a good example of the transformation underway for new NATO members, Slovakia is implementing a series of reforms between 2002 and 2010 which will concentrate first on personnel and training, with equipment modernisation to follow by 2015. Changes to the rank structures of the Slovak armed forces have begun, and reform of air force, ground force, and support/training structures will be completed in 2004, 2005, and 2007 respectively. New doctrine is also being developed, and is to be completed by the end of 2006, at which time the overall target figure of 27,737 personnel will also have been reached. Modernisation of basic arms and equipment is to be completed by 2015, and it is anticipated that the focus will be on aircraft and information systems.

Table 2 Selected NATO Exercises 2003–04

**MILITARY ADVISERS** 458 in 26 countries

### Foreign Forces

---

**US: Air Force** 9,800; 1 Air Force HQ (3rd Air Force) 1 ftr wg (2 sqn with 48 F-15E, 1 sqn with 24 F-15C/D), 1 air refuelling wg with 15 KC-135, 1 Special Ops Gp with 5 MC-130R, 5 MC-130H, 1 C-130E, 8 MH-53J  
**NATO** HQ Allied Naval Forces North (HQNVA/NORTH), HQ East Atlantic (HQEASTLANT)  
Combined Air Operations Centre (CAOC) 9, High Wycombe

## Non-NATO Europe

Some non-NATO European nations have concentrated on military reform and transformation. **Ukraine** has said it will reduce its ground forces if funding allows, and **Georgia** plans to complete reforms, that would entail switching to the European model of armed forces, by April 2004. Meanwhile, the foreign and defence ministries of the new Georgian government have been preoccupied by continued tensions with Moscow over the withdrawal from its military bases in Georgia and the issue of the autonomous regions of South Ossetia and Abkhazia (see p. 100).

Following the peaceful 'Rose Revolution', which culminated with Mikhail Saakashvili's landslide presidential election victory on 4 January 2004, Georgia moved into a period of hopeful uncertainty. This followed the resignation of former President Eduard Shevardnadze, who stepped down after civil disturbances, and the intervention of Russian foreign minister, Igor Ivanov. The populist Saakashvili immediately showed his determination to set Georgia on a 'fast track' to recovery and to resolve the separatist ambitions of Adjara, South Ossetia, and Abkhazia.

Saakashvili's first objective was to recover the autonomous region of **Adjara**, and oust its autocratic president, Aslan Abashidze. Without resorting to force, Georgian authorities applied pressure on the Abashidze regime and helped to orchestrate popular protest within Adjara demanding Abashidze's resignation. Russian intervention was again crucial to a peaceful resolution, and on 5 May 2004 Igor Ivanov, now head of Russia's Security Council, persuaded Abashidze to leave Adjara, thus solving the first of Georgia's regional disputes.

Saakashvili then turned his attention to **South Ossetia**, which following the 1992 conflict had existed as a separatist region outside Tbilisi's control under the oversight of a Joint Control Commission (JCC) comprising Russian, North Ossetian, South Ossetian and Georgian members, and a joint peacekeeping force. However, unlike Adjara – which is populated by ethnic Georgians – South Ossetia has a different ethnic composition, with close links to Russia through the latter's Republic of North Ossetia. Thus, Saakashvili does not command the support of the Ossetian population as he did in Adjara. Nevertheless, he has emphasised his commitment to a peaceful reunification of Georgia and South Ossetia. However, harsh rhetorical statements, followed by the deployment of Georgian interior forces on 31 May 2004 – allegedly to combat illicit trafficking a major problem in the region – soon provoked an escalation in conflict. By the middle of August 2004 there were regular exchanges of fire between Georgian and South Ossetian forces, which the Russian peacekeepers were unable to prevent. The JCC and OSCE negotiated a ceasefire on 14 August. However this did not hold, and Tbilisi accused Russia of providing military assistance to Eduard Kokoity's regime in the South Ossetian capital of Tshkinvali. Meanwhile, the Georgian parliament voted for the withdrawal of the Russian peacekeepers, while President Saakashvili appealed to the international community for international forces to replace the Russian peacekeepers.

Saakashvili has been more careful in his relations with **Abkhazia**, while making it clear that he seeks a resolution of the conflict, and the return of Georgian and Mingrelian Internally Displaced People (IDPs) to Abkhazia.

Overall, Saakashvili's approach has had the effect of re-invigorating tensions that had been simmering during the final corrupt years of the Shevardnadze regime. He has pledged to tackle corruption, but in doing so he risks inventing his own brand of cronyism by seeking support and advice from an exclusive close circle of advisors. His foreign policy is underpinned by a clearly stated desire for closer relations with NATO, the EU, and the US. At NATO's Istanbul summit, approval was given by member states for a two-year Individual Partnership Action Plan (IPAP) which increases defence cooperation between the Alliance and Tbilisi, as well as putting Georgia on track for NATO membership. There has also been an increase in bilateral defence activity between the Georgian armed forces and NATO countries. For example, a joint exercise was held with the UK on the Vaziani training area between 3–17 July 2004 to improve procedures

## 78 Non-NATO Europe Part I

in humanitarian operations. Georgian commando forces participated with a 165-strong British infantry company. At the same time, defence cooperation with the US and Turkey – which had slackened in frustration in the final months of the Shevardnadze regime – has once more increased.

However, the aspirations as well as the approach of the new Georgian leader have angered Russia. NATO's formal acceptance of IPAP, and the inclusion of a paragraph in the Istanbul summit's final communiqué, which stressed Russia's obligations to withdraw its bases from Georgia and Moldova, have served to increase tension with Moscow, as have Saakashvili's moves against the autonomous regions. However, Russia also recognises that the aspirations of Saakashvili to EU and NATO membership gives the West considerable leverage in restraining the Tbilisi regime.

---

## THE BALKANS

---

On 28 June 2004, it was announced that the European Union and NATO had reached agreement on the transfer of peacekeeping duties in **Bosnia** from SFOR to a 7,000 strong EU-led force (EUFOR) by the end of 2004. The decision marks the biggest change to the international presence in Bosnia since the end of the war in 1995. The EU force arrives at a difficult time for the Balkans and will face a number of challenges, such as organised crime, human and weapons trafficking, the apprehension of war criminals and border security.

In **Kosovo**, tensions between Albanian and non-Albanian ethnic communities, as well as between Albanians and the province's international administrators, reached a peak on 17–18 March 2004, when violence erupted throughout the province. Rioting was sparked by the alleged drowning of an Albanian boy in the divided town of Kosovska Mitrovica but seemed organised and well targeted. Although most of the violence was directed at UNMIK, Serb communities suffered heavily, most notably in the isolated areas such as Gracanica. The violence rocked the already shaky Kosovo interim authority and managed to undo most of the previous five years' achievements. It also revealed the deep unease within the ethnic Albanian population, whose high unemployment rate and lack of leadership make it easily manipulated by a violent and criminal minority.

The March events showed that the policies of the Kosovar interim institutions and those of the international community remain on a collision course. The violence has exposed UNMIK's mandate as inadequate for the tasks of facilitating a transition from war to peace and transformation of the Kosovan economy. The rioting also swung international opinion away from the Albanian community – the international community expressed more sympathy with the Serbs. Overall, the events make a quick decision on the status of Kosovo unlikely, while the deep divide between the communities shows no signs of healing.

**Bosnia and Herzegovina** adopted a Law on Defence on 1 December 2003 that established civilian command and parliamentary control of the armed forces, as well as noting that the post of defence minister should be held by a civilian. These reforms moved Bosnia toward meeting the requirements for NATO membership, and were confirmed by both the foreign minister's statement that Bosnia desired to join NATO as soon as possible and a statement by the NATO Secretary General in February that he would like to see Bosnia join PfP. Bosnia's other military reforms included an announcement of a reduction in the size of the federation army, from 13,200 to 8,000 in 2004. In **Macedonia**, steps are being taken to reach the proportion of Albanian representation in the armed forces demanded by NATO for membership. **Azerbaijan** hosted the Partnership for Peace's *Best Effort 2004* planning conference in Baku, and **Armenia** has joined the Status of Forces Agreement under PfP as well. Finally, **Turkey**, which allowed the US to establish a firmer presence near the Syrian border in late 2003, has also permitted an expanded US presence at the Konya air base, for NATO-related exercises, and will become a main export and production centre for *Black Hawk* helicopters in the next one-to-two years.

In a referendum on the reunification of **Cyprus** on 24 April, 75.8% of Greek Cypriots voted against uniting the island, whereas the Turkish population voted for unity. The situation was further complicated on 1 May, when the Republic of Cyprus joined the EU, because the failure of the UN-brokered April referendum, dubbed the 'Annan Plan' meant that following entry, the EU *acquis* has been suspended for the northern area. While Greek Cypriot leaders have since expressed support for a modified solution based on the Annan plan, which calls for a bi-zonal federation, the referendum results are likely to complicate EU–Cyprus relations for some time.

Even those non-NATO countries without any affiliation have not remained unaffected by the trends of consolidation that Europe has witnessed. While non-aligned states such as Finland, Sweden and Ireland have rejected a military assistance pact within the EU, **Austria** has indicated that it might be interested through possible modifications of its historical 'neutrality'.

## 80 Non-NATO Europe Part I

### Albania Alb

Updated data is tinted

#### Total Armed Forces

**ACTIVE** €21,500

*Terms of service* conscription 12 months

The Alb armed forces are being re-constituted.

The army is to consist of:

1 Rapid Reaction Bde (active)

5 inf bde (reserve), 1 tk bn (reserve), 1 cdo regt,

1 arty bn (reserve), 1 engr bn Restructuring is now planned to be completed by 2010.

**Army** some 16,000

#### EQUIPMENT

MBT 373 T-59

APC 86 PRC Type-531, 37 M-113

TOWED ARTY 122mm: 198; 130mm: 18; 152mm: 54

## Bosnia-Herzegovina BiH

Updated data is tinted

### Total Armed Forces

In accordance with the Dayton Peace Accords, **BiH** is composed of two entities:

- the (Muslim-Croat) 'Federation of Bosnia and Herzegovina' and
- the (Serbian) 'Republika Srpska'.

The predominant view until 2003 was that the constitution would have precluded State command and control over armed forces, and attributed most competencies regarding defence and military matters to the two entities. There have thus been no armed forces (except for Border Guards and the Brcko-district police) at the State level. The two entities have kept the armed forces they had established throughout the armed conflict until the 1995 Dayton Peace Accord.

The armed forces of the entities are subject to an arms-limitation regime established under the Dayton Peace Accord. An agreement signed by BiH, its two entities, Cr and FRY on 14 June 1996, established arms ceilings for the armed forces of the parties.

In May 2003 the High Representative established a Defence Reform Commission which should elaborate structures for Command and Control on the State level, including a joint General Staff. Work should be completed by the end of 2003.

In May 2003 the High Representative established a Defence Reform Commission which recommended in September 2003 the establishing of State level command and control, including a State Ministry of Defence and a State Joint Staff, and a further reduction of the Entities' armed forces.

In December 2003, the Parliamentary Assembly of BiH adopted a law on defence, which established the recommended State structures. The chain of command now goes from the State Presidency via the State Ministry of Defence and the Joint Staff and a joint Operational Command to the respective forces within the Entities.

A Presidential Decree in March 2004 established new ceilings for the armed forces of BiH. There will be a total of 12,000 professional soldiers (8,000 for the Federation and 4,000 for the RS), 12,600 conscripts (8,400 for the Federation and 4,200 for the RS), and 60,000 reserves (40,000 for the Federation and 20,000 for the RS).

**ACTIVE** see individual entries below

State Joint Staff: 44

State Joint Operational command: 28

## Forces of the Federation of Bosnia and Herzegovina

The Armed Forces of the Federation (Federation Army)

## 84 Non-NATO Europe Part I

(VF)) consist of Muslim and Croat components. The federation's defence law indicates that the forces are to have joint institutions at the level of Ministry of Defence, General Staff and some formations directly subordinated to the General Staff incl the air force, air defence command and Rapid Reaction bde. Integration on lower echelons has been limited. The Federation Army (VF) is currently reducing to only 2 active mech inf brigades.

**Army** (VF) 16,400 with some 8,000 professionals, (VF-B 5,576; VF-H 2,424), 8,400 conscripts (6,416 VF-B; 1,984 VF-H)

### REFORM

**Military reform**, driven by President Putin, continues to be a priority for the Russian Federation's armed forces. However, in the past year the pace of reform has slowed due to the impact of the Presidential election campaign and because of continuing tension between the Minister of Defence, Sergei Ivanov, and the Chief of the General Staff, Army General Anatoliy Kvashnin. However, with the retirement of Kvashnin in July and the appointment of the more reform minded General Yuri Baluyevsky, it is likely that the pace of change will increase. (For some background on the reform issue, see *The Military Balance* 2003•2004 p. 85)

Conscription is to be reduced, although not removed entirely, and an alternative to military service will be introduced for those who can prove that serving in the army runs counter to their religious or personal views. People performing alternative service in organisations belonging to the armed forces and other military agencies will serve for 36 months, while those with a higher education will have to serve for 18 months.

In October 2003, Russia issued a defence white paper – sometimes referred to as defence doctrine. This comprehensive 74-page document outlines Russia's strategic environment, the tasks of the armed forces, priorities for defence reform and Russia's multilateral commitments, including those within the Collective Security Treaty Organisation (CSTO) of the CIS.

President Putin has emphasised the need for **civilian control over the armed forces**, as well as the need to improve defence management and the structure of the armed forces. This was reiterated by Viktor Zavarzin, Chairman of the Russian State Duma Defence committee, who told NATO representatives on 31 May that civilian control over the armed forces and other law-enforcement agencies had strengthened in Russia. Prior to this, on 29 April 2004, the State Duma passed amendments to the 'On Defence' law, which significantly reduces the General Staff's role in controlling national armed forces. While the current law states that command and control over the armed forces is exercised by the defence minister through the defence ministry and General Staff, the new text says only that command and control are exercised by the defence minister through the Russian defence ministry. Also removed was a reference to the General Staff as 'the main body of operational control over the Russian Armed Forces'. According to Defence Minister Ivanov the General Staff must become 'the army's brain', instead of taking on administrative and command functions. Thus the General Staff will be dealing mainly with planning with functional command being exercised through the single service staff headquarters. According to a Presidential Decree entitled 'Questions on the MOD of the Russian Federation', announced on 17 August 2004 by Ivanov, the defence minister will have four deputies instead of ten, with two of the four being first deputies, including the CGS. The Chief of the General Staff will be the First Deputy Minister responsible for planning and the operational preparedness of forces, while the second First Deputy Minister will have responsibility for defence management.

Personnel numbers for all Russia's armed forces will be reduced to about 1 million by 2005, from a total establishment of some 1.212m. Furthermore, the move to reduce command elements and unnecessary structures in the armed forces continues. Following the integration last year of army aviation units into the Russian air force, the defence ministry will, in 2004, absorb both the Railway Troops and Special Construction Troops, removing two superfluous headquarters and attendant staffs.

Defence reform programmes continue to be complicated by competition for resources and poor coordination among the ministries concerned. Another attempt to improve the system was made in September 2003, when Putin signed Order 1058. This made the defence ministry and the General Staff responsible for coordinating the actions of all security structures with a military component.

However, this may be perceived as a move towards bringing interior ministry troops under the auspices of the defence ministry. This could lead to additional confusion regarding operations in Chechnya, where the Ministry of the Interior still holds formal operational command over all personnel in the group of forces stationed there.

**Professionalisation** remains a priority of the reform programme. After the experiment with the 76<sup>th</sup> Airborne Division (See *The Military Balance* 2003•2004 p.85), other initiatives have been instituted. But despite the shift from conscription, President Putin has said that Russia cannot afford an all-volunteer force, and that the goal is to have armed forces with a professional component constituting, by the end of 2007, 17% of the whole. It remains the intention to have fully professional marine/special forces units, interior troops and border guards and only deploy professional servicemen on operations and abroad. This is already the case in Tajikistan and Abkhazia, and will apply to Chechnya by 2005. In 2008, compulsory military service is to be reduced from two years to one. Meanwhile the Spring 2004 call up of army conscripts was the lowest ever reported in Russian or Soviet history – only 9.5% of those men of draft age were successfully drafted. In the Chechen republic, it was reported that a total of 39 soldiers were conscripted and 40 officers contracted for service in 2004.

In order to alleviate this problem, the military leadership is seeking to abolish all exemptions and deferrals from military service – there are currently 24 grounds for deferral for university students. If introduced, this move will carry a high political price for President Putin, due to the unpopularity of conscription. Nonetheless, the defence ministry will, in 2004, call up a total of 15,000 graduates – a record number and which is designed to fill the shortfall of junior officers. According to Viktor Zavarzin, Chairman of the State Duma Defence Committee, the wastage rate for officers has recently increased beyond the annual level of 5–7%, making it impossible for officer training establishments to train sufficient replacements.

The outflow of officers is most likely due to dissatisfaction with the terms and conditions of service among young and middle-ranking officers. However, a second and irreconcilable problem is the demographic downturn in the country as a whole. Official Russian statistics show a steep decline in the male birthrate. Therefore, the number of 18-year-old men available for military service is also declining and, in the short term, it is estimated that the demographic base for conscription is set to decrease from 1.6m in 2003 to 800,000 in 2007. This alone means that defence planners in Moscow will have to look at different and smaller military structures for the future.

Moreover, the quality of conscripts continues to deteriorate. In 2004, only every second man conscripted was deemed fully suitable for service on medical grounds, 20% of conscripts have just primary education, and 5% have criminal convictions. Therefore, in order to overcome the shortage of conscripts the Russian military are seeking to conscript more Russian citizens residing outside the country as well as other CIS citizens who can become Russian citizens after three years service. But this is controversial, particularly for areas of conflict in the Caucasus and Transdniestria where Russia has already granted passports to many residents, including those serving with locally stationed Russian forces.

With the increasing pace of professionalisation, Russian authorities have said that the military will continue to reform its social security and housing programmes, while a special mortgage system will be instituted for professional servicemen with more than three years service. Another new initiative, which has been instituted to rectify the lack of a professional non-commissioned officer (NCO) cadre, is the institution of NCO training schools – with the first in July 2004. It is expected that career NCO training will help to overcome some of the problems of *dedovschina* (bullying) and general indiscipline that have beset the army in recent years.

Apart from the defence ministry, the interior ministry is starting to professionalise its forces this year. 12,500 Interior troops will be put on a professional footing between 2004 and 2007, beginning with the 46<sup>th</sup> Special-Purpose Brigade stationed in Chechnya. Moreover in 2006, interior ministry forces will be renamed the National Guard; overall, they have reduced by some 20,000 troops since 2001.

## CAPABILITY ISSUES

The **Strategic Rocket Forces (SRF)** remain an active component of Russia's defence structure and there is no apparent intention to reduce their complement. Railway-based systems will continue in service until 2006 and it was announced in December 2003 that there would be ten missile launches in 2004 (11 took place in 2003). Moreover, it was reported that Russia is to develop a new intercontinental ballistic missile with the capability to carry ten warheads; the quoted in-service date is 2010. At the same time, space is increasingly a strategic priority – particularly in order to provide communications for the armed forces as they attempt to modernise and move to a posture of force projection.

The **Russian air force** has proceeded with some equipment modernisation programmes. First deliveries of the Su-34, which is to replace the Su-24 and Tu-22, are expected to begin in 2005. The Su-34 is noted for its manoeuvrability, range and weaponry. In addition to its 30mm GSh-301 gun, the aircraft can carry the AA-11 *Archer* short-range IR air-to-air missile, the AA-12 *Adder* medium-range, radar-guided missile, plus a range of precision guided and unguided weapons including the KAB-500 laser-guided bomb. The Su-34 is equipped with an electro-optical fire control system, a forward-looking infrared pod and an electronic countermeasures suite. It has a range of 4,500km.

Meanwhile the programme to upgrade the Su-27SN air superiority fighter is nearing completion. In December 2003, the first five 15-year-old Su-27s to be upgraded to Su-27SM standard were returned to service. The Su-27SM features a strengthened fuselage, wing and landing gear to allow for a higher weapon load, and features upgraded onboard electronics. The air force should have one regiment converted to the Su-27SM this year. Meanwhile, the Il-112V, will replace the An-26 and An-24 in a bid to enhance air transportation capability, while the Mi-8MTKO transport helicopter will increase tactical battlefield airlift capability: it can carry 36 troops instead of the 24 carried by the Mi-8. One regiment from the North Caucasus Military District is expected to receive the all-weather day/night Mi-24PN and Mi-8MTKO attack helicopter. Furthermore, special force units are expected to receive a quantity of Ka-52s for reconnaissance and intelligence-gathering.

Indicating an improvement in C4ISR capability, the Commander-in-Chief of the air force, General Mikhailov, said in August 2003 that 'redundant aircraft' such as the L-39 and MiG-27 are being considered for conversion into UCAVs by installing automatic flight control systems, 'for which we have developed the technologies.' Moreover, as a reflection that lessons have been learned from US air operations over Iraq, he also said that the Gorbunov aviation plant in Kazan would build three Tu-160 strategic bombers. The Gorbunov plant is also repairing and upgrading Tu-22MR long-range reconnaissance aircraft and Il-62M VIP transports with encoded communication systems.

But despite these equipment enhancements there are still problems concerning the allocation of resources and finance. While flying hours in the air force academies have increased by 67% in the past three years, the average annual flight time for air force pilots is still only 12–44 hours, which is only 20% of the standard requirement of 160–180 hours.

The **Russian navy** has carried out some minor sea deployments, including joint training with the Indian navy. As a possible sign of future larger-scale training, the aircraft carrier *Admiral Kuznetsov* will return to operational duties in the autumn after an extensive refit, and will lead a training battle group into the Atlantic for exercises, which will include the deployment of its 36 Su-33 aircraft.

## JOINT TRAINING (SEE TABLE ON PAGE 102.)

There have been a number of significant joint and multi-national training events this year, indicating a trend towards joint-service and multi-national cooperation. Within Russia, the June 2004 *Mobilnost* exercises showed the military's intention to bolster its force mobility and practise power projection in a joint service scenario. In the international environment, the *Torgau-2004* exercise, conducted with the

United States in May 2004, concentrated on anti-terrorism and peacekeeping. Russia also increased its interaction with NATO; a spokesman for the Russian General Staff announced in April that Russia and NATO would have 35 joint events in 2004. Meanwhile, the Collective Security Treaty Organization (CSTO) continued to increase its training, focusing specifically on anti-terrorist operations. By way of example, August 2004 saw the Collective Rapid Deployment Forces of the CSTO take part in a two-stage joint tactical exercise – titled *Rubezh 2004* – in the Kyrgyz region of the Fergana valley (see p. 103). China and Uzbekistan, who belong to the Shanghai Cooperative Organization (SCO) but not CSTO, attended *Rubezh* as observers, indicating the increasing cooperation between CSTO and SCO on issues of common interest.

---

## **INTERNATIONAL POLITICAL-MILITARY ISSUES**

---

Russian cooperation with NATO reached new levels with the April 2004 agreement to set up a Russian liaison group at NATO SHAPE headquarters and enlarge the NATO mission in Moscow. Moreover, Colonel General Yuri Baluyevsky, then first deputy chief-of-staff of the Russian armed forces and now CGS, announced in June that Russia would establish a brigade to participate in peacekeeping operations jointly with NATO. Russia's cooperation with NATO and its bilateral contacts, such as the unprecedented Russia-US *Torgau* exercises the previous month, as well as Russia's decision to join the US-led Proliferation Security Initiative clearly demonstrate the acceleration of military-to-military cooperation between Russia and Western countries.

In the political sphere, however, the relationship remains more complex due to NATO's expansion up to Russia's western borders. While Russia has said that it does not consider the expansion a military threat, its attitude toward expansion has remained 'calmly negative,' and defence minister Ivanov has suggested that Russia would revise its military planning if NATO retains its doctrine of expansion or if NATO infrastructures are located on Russia's perimeter. Moscow may be compelled to re-deploy some of its forces in response. Thus the presence of NATO planes in Lithuania prompted particular objection. However, during his April 2004 visit to Moscow, NATO Secretary-General Jaap de Hoop Scheffer stated that there were no plans to create Alliance infrastructures on the territory of new member states. Furthermore, the Conventional Forces in Europe (CFE) Treaty is also a concern for Moscow, as the Baltic States have yet to become signatories of CFE, though they are now NATO members. But NATO, for its part has specifically linked CFE ratification to Russian withdrawal from its bases in Georgia and Moldova, to which Moscow says it only gave a political, not legal, commitment at the Istanbul Summit in 1999. The Russian opinion is that these matters should be handled bilaterally with Georgia and Moldova. So far, neither party has made any progress on negotiations over base withdrawals, and although President Putin supported a proposal to establish a joint Georgian-Russian anti-terrorist centre on the site of one of the bases, he refused to link it explicitly to base closures. Putin claims that decisions on these issues should be dictated by financial and logistical factors. However, Russian relations with Georgia have worsened since Mikhail Saakashvili was elected to power in January 2004. This is largely due to his overtly pro-Western foreign policy and his confrontational approach towards the separatist regions of South Ossetia and Abkhazia, where Russia has its own interests (see page 36).

In Central Asia, multilateral efforts and bilateral agreements revealed a Russian intention to increase its regional presence. The CSTO continued to solidify its structures, achieving UN status as first a regional international organisation and then as an observer. President Putin has said that the CSTO should, in the coming year, look for possible opportunities for cooperation with other multilateral institutions like the UN, SCO and OSCE; and cooperation with NATO has been broached as well. In terms of other multilateral projects, the development of the Commonwealth of Independent States (CIS) Unified Air Defence System continued, and CIS states have worked to codify consistent antiterrorist legislation. The SCO also detailed its own antiterrorism strategy at the organisation's June summit and a Regional Anti-Terrorist Centre

(RATC) was opened in Tashkent. These last two developments reflect the emphasis paid to antiterrorism and the illicit drugs trade by countries and organisations in the region.

On a bilateral level, significant developments include the ratification of an air defence agreement between Russia and Uzbekistan. Moreover, following the March 2004 terrorist attacks in Tashkent, Moscow was quick to offer assistance to the Uzbek government, indicating an improvement in the bilateral relationship (see p. 142).

---

## CHECHNYA

---

The Chechen conflict is moving into its fifth year, with no sign of resolution, an undiminished casualty rate, and with terrorist attacks continuing outside the Republic. The period around the October presidential election was particularly bloody, witnessing two high-profile train bombings – one in the Stavropol region in December 2003 and a February 2004 Moscow attack. One of Moscow's responses has been to target Chechen leaders, as was illustrated by the February 2004 assassination of rebel leader Zelimkhan Yandarbiev in Qatar, for which two Russians, suspected of being government agents, were indicted.

Since the Interior Ministry (MVD) assumed command and control of operations in Chechnya on 1 September 2003, casualties among MVD troops and defence ministry units have remained high. Troop numbers in the Chechen Republic also remain high, with some 11,000 troops from the MVD, an estimated 30,000 to 40,000 defence ministry troops deployed, as well an undisclosed quantity of forces from the state security service (FSB).

Chechen rebels continue to exercise considerable freedom of movement within the Republic, using hit and run tactics against federal forces. The assassination of erstwhile Chechen President Akhmad Kadyrov, in Grozny's Dynamo Stadium at a Victory Day parade on 9 May 2004, demonstrated not only the resolve of rebels to attack Chechens loyal to Moscow, but also an ability to plan ahead, and execute operations at will. The assassination of Kadyrov was claimed by Shamil Basaev, whose group remains arguably the most militarily competent as well as being the most extreme. It is responsible for many of the attacks outside the republic, including continuing suicide attacks.

Apart from the assassination of Kadyrov, the most significant attack took place in the Ingush capital, Nazran, on the night of 21 June 2004. Some 50 people were killed when a group of some 200 rebels, equipped with heavy weapons and believed to be from Maskhadov's group (which claimed responsibility), attacked targets in and around the city. This demonstrated an ability to move freely and in strength outside, as well as within, Chechen borders; Maskhadov had himself given warning of an intention to expand operations outside Chechnya. An FSB operation foiled another attack in Makhachkala, the capital of Dagestan, on the same night. It is significant that Ingush and other North Caucasus fighters, as well as those from Chechnya, took part in the operation in Ingushetia. This indicates a Caucasus-wide recruiting base for the rebels.

The Russian response to rebel attacks, and to the conflict in general, has not changed. The military response has typically been characterised by 'cleansing' operations, resulting in sweeping arrests that further alienate a beleaguered population. Visiting Chechnya following Kadyrov's assassination, Putin publicly commented on the horrific state of Grozny, and ordered his Finance Minister German Gref to come up with a plan to reconstruct the city. However, there is no visible socio-economic strategy for Chechnya and the human cost to the population continues to be exemplified by the high number of refugees and Internally Displaced People (IDPs). From a pre-war population of around 400,000, Grozny's population has dropped to somewhere between 200,000–240,000 today. IDP figures are difficult to ascertain since the authorities stopped registering IDPs in 2001, but approximately 71,500 are thought to be in Ingushetia, with an estimated 140,000 IDPs located inside Chechnya – bearing witness to the deficiencies of a counter-insurgency campaign that lacks any real social and economic initiative, exemplified by the forcible closure of the last IDP camp in Ingushetia.

### Table 3 Selected Training Events Involving Russian Forces, 2004

Dates	Name	Type	Location	Under	Participants	Notes
Feb	<i>Bezopasnost -2004</i>	Strategic nuclear forces, nuclear deterrence forces			Strategic bombers	Failed missile launch
31 Mar –5 Apr		2-sided tactical naval exercise with landing operation	Black Sea, landing at Feodosiya		Black Sea Fleet: attack aviation, helicopters, 3 large landing craft, ~30 pieces of combat hardware, ~ 200 marines	
7–12 Apr	<i>Southern Shield of the Commonwealth –2004</i>	Air defence	Kazakhstan	CIS Unified Air Defence System	Over 50 air defence command posts, 70 warplanes, 200 autos	
12 Apr		Tactical counter reconnaissance and sabotage countermeasures	Ashuluk training field in Astrakhan region		Belarussian and Russian air/air defence forces; SAM brigade	Included live Buk-M1 launches
26 Apr		Strategic aviation	Far East: Siberia and Arctic Ocean area		Strategic aviation units including TU-95 Bear and TU-22 Blinder bombers; fighters; A-50 Mainstay airborne control aircraft	Fired long-range cruise missiles
26 Apr–6 May		Naval, aviation	Pacific, Sea of Japan (East Sea)		Russian Pacific Fleet Maritime Division: over 20 surface ships, submarines, PT boats, auxiliary ships. Also aviation.	
17–22 May	<i>Torgau-2004</i>	Anti-terrorism and peacekeeping	Moscow region		US, Russia	
17–23 May		Border	Russian–Kazakh border, near the Caspian Sea		South-eastern regional border directorate of Russian Federal Security Service and operations teams of Kazakh National Security Committee	
1 Jun	<i>Baltops-2004</i>	Naval, interoperability		NATO Partnership for Peace Programme	50 warships, 20 aircraft from 15 countries	
5–6 Jun		Naval, border	Bay of Finland: Finnish territorial waters		Russian, Estonian, and Finnish border guards	Culminated in signing of protocol on cooperation in border protection
15–17 Jun		Logistics and maintenance support	Volgograd, North Caucasus Military District		Included 500 men from 76 <sup>th</sup> Railway Corps	

Dates	Name	Type	Location	Under	Participants	Notes
9–30 Jun	<i>Mobilnost-2004</i>	Airlift operations	Baltic across Russia to Far East	Russian MoD	Mobile reserves and rapid deployment units	Civilian aircraft involved
15 Jun		Naval anti-terror	near Pusan, South Korea		8 vessels including 2 Russian patrol ships, 2 helicopters, Russian rapid reaction force and commandos. Total personnel: 250.	
22–25 Jun	<i>Kaliningrad-2004</i>	Fire extinguishing at sea oil fields; international rescue	Lukoil’s D-6 oil platform in Baltic Sea, coast near Khmelyovska training ground	Russian, NATO, Euroatlantic Partnership Council	About 1,000 people from 22 countries	
22–25 Jun		Anti-terrorism		Russia–NATO		
19–26 Jul	<i>Blue Shield 2004</i>	Peacekeeping	Near Chisinau		Russia, Moldova: 40 servicemen each	
1–10 Aug	<i>Rubezh-2004</i>	Joint	Kant Airbase, Kazakhstan	CSTO	CRDF and Russian aviation (CRDF total 4,500 personnel): Russia, Kazakhstan, Kyrgystan, Tajikistan. China and Uzbekistan as observers	
Aug		Air Force live firing	Balkhash	CIS Air Defence		
Summer		Naval	Atlantic		Russian, French nuclear submarines	
Summer		WMD Proliferation	Kola Peninsula	Russia–NATO		
Summer	<i>Atom-2004</i>	Antiterror: protection of critical facilities, including nuclear power plants		Interior Ministry	Interior Ministry Forces	
1 Aug–10 Sep	<i>BLACKSEAFOR</i>	Naval	Black Sea – Poti port water area	Underwater air defence, mine clearance, sea rescue ops & joint manoeuvres	Ships of Black Sea Fleet and Turkish Navy: Bulgaria, Russia, Georgia, Romania, Turkey, Ukraine	
4–6 Sep		Naval	Tyrrhenian Sea		Russia, Italy	

Table 3 Selected Training Events Involving Russian Forces, 2004

## Russia RF

Updated data is tinted

### Total Armed Forces (incl MOD and forces of other ministries)

**ACTIVE** 1,212,700

**RESERVES** some 20,000,000

some 2,400,000 with service within last 5 years;  
Reserve obligation to age 50

### Strategic Deterrent Forces €149,000

(incl 11,000 assigned from the Navy and 38,000 assigned from Air Force)

**NAVY** (€11,000)

216 msl in 14 operational SSBN†

**SSBN** 13 declared operational (all based in RF ports)

6 *Delta* IV with 16 SS-N-23 *Skiff* (RSM-54) (96 msl)

2 *Typhoon* with 20 SS-N-20 *Sturgeon* (RSM-52) (40 msl)

6 *Delta* III with 16 SS-N-18 *Stingray* (RSM-50) (96 msl)

(The following non-op SSBNs remain START-accountable, with a total of 76 msl:

3 *Typhoon* with 20 SS-N-20 *Sturgeon* (RSM-52) (60 msl)

1 *Delta* III with 16 SS-N-18 *Stingray* (RSM-50) (16 msl)

**STRATEGIC MISSILE FORCE TROOPS** (€100,000 incl 50,000 conscripts)

3 rocket armies equipped with silo and mobile msl launchers. 635 launchers with 2,500 nuclear warheads org in 15 div: launcher gp normally with 10 silos (6 for SS-18) and one control centre; 12 SS-24 rail, each with 3 launchers

**ICBM** 635

112 SS-18 *Satan* (RS-20) at 4 fields; mostly mod 4/5, 10 MIRV per msl

150 SS-19 *Stiletto* (RS-18) at 4 fields; mostly mod 3, 6 MIRV per msl

12 SS-24 *Scalpel* (RS-22) 10 MIRV; 36 rail

325 SS-25 *Sickle* (RS-12M); mobile, single-warhead

36 SS-27 (*Topol*-M2), 4 regts (5 from Oct 04), each with 6-10 launches

**ABM** 100: 36 SH-11 (mod *Galosh*), 64 SH-08 *Gazelle*, S-400

**LONG-RANGE AVIATION COMMAND** (37<sup>th</sup> Air Army) START-Accountable 63 Tu-95MS, 15 Tu-160 (Test ac 7 Tu-95, 1 Tu-160), START attributes 8 ALCM (kh-555/kh-101) warheads to each ac

### WARNING SYSTEMS

ICBM/SLBM launch-detection capability, others include photo recce and ELINT

#### RADARS

**OVER-THE-HORIZON-BACKSCATTER** (OTH-B)

2 in Ukr, at Nikolaev and Mukachevo, covering US and polar areas, 1 near Yeniseysk, covering PRC

### LONG-RANGE EARLY-WARNING ABM-ASSOCIATED

7 long-range phased-array systems operational: Moscow, Olenegorsk (Kola), Gaballa (Az), Baranovichi (Bel), Pechora (Urals), Balkhash (Kaz), Mischelevka (Irkutsk)

11 *Hen House*-series; range 6,000km, 6 locations covering approaches from the west and south-west, north-east and south-east and (partially) south. Engagement, guidance, battle management: 1 *Pill Box* phased-array at Pushkino (Moscow)

### SPACE FORCES

Formations and units withdrawn from Strategic Missile and Air Defence Forces to detect missile attack on the RF and its allies, to implement BMD, and to be responsible for military/dual-use spacecraft launch and control.

### Army €360,000

(incl €190,000 conscripts)

6 Mil Districts (MD), 1 Op Strategic Gp

8 Army HQ, 2 Corps HQ

5 TD (3 tk, 1 motor rifle, 1 arty, 1 SAM regt; 1 armd recce bn; spt units)

19 MRD (3 motor rifle, 1 tk, 1 arty, 1 SAM regt; 1 indep tk, 1 ATK, 1 armd recce bn; spt units)

4 ABD (each 2/3 para, 1 arty regt) plus 1 AB trg centre (bde)

6 MG/arty div

5 arty div (each up to 6 bde incl 1 MRL, 1 ATK)

7 District trg centre (each = bde - 1 per MD)

13 indep bde (10 MR, 3 AB)

7 SF (*Spetsnaz*) bde

18 indep arty bde (incl MRL)

14 SSM bde (SS-21)

5 ATK bde, 3 ATK regt

19 SAM bde (incl 2 SA-4, 4 SA-11, 1 SA-12; all AD div disbanded)

Other Front and Army tps

engr, pontoon-bridge, pipe-line, signals, EW, CW def, tpt, supply bde/regt/bn

**RESERVES** (cadre formations, on mobilisation form)

2 TD, 13 MRD, 1 hy arty bde, 4 indep arty bde, 6 MR bde, 2 tk bde

### EQUIPMENT

**MBT** about 22,800 (incl eqpt in store): T-34, 1,200 T-55, 3,000 T-62, 4,000 T-64A/-B, 9,700 T-72L/-M, 4,500 T-80/-U/UD/UM, 400 T-90

**LT TK** 150 PT-76

**RECCE** some 2,000 BRDM-2

**TOTAL AIFV/APC** 24,990 (incl eqpt in store)

**AIFV** 15,090 (incl eqpt in store): 8,100 BMP-1, 4,600 BMP-2, 190 BMP-3, some 1,500 BMD incl BMD-1, BMD-2, BMD-3, 700 BRM-1K, BTR-80A

APC 9,900 (incl eqpt in store): 1,000 BTR-50, 4,900 BTR-60/-70/-80 incl BTR-60, BTR-70, BTR-80, some BTR-90, 700 BTR-D; 3,300 MT-LB

**TOTAL ARTY** 30,045 (incl eqpt in store)

**TOWED** 12,765 (incl eqpt in store): **122mm:** 3,750 M-30; 4,600 D-30; **130mm:** 650 M-46; **152mm:** 100 ML-20; 700 M-1943; 1,075 D-20, 1,100 2A36, 750 2A65; **203mm:** 40 B-4M

**SP** 6,010 (incl eqpt in store): **122mm:** 2,780 2S1; **152mm:** 1,600 2S3, 950 2S5, 550 2S19; **203mm:** 130 2S7

**COMBINED GUN/MOR** 820+: **120mm:** 790 2S9 SP, 2B16, 30 2S23

**MRL** 4,350 (incl eqpt in store) **122mm:** 50 BM-13/-14/-16, 2,500 BM-21, 420 9P138; **220mm:** 900 9P140; **300mm:** 106 9A52

**MOR** 6,100 (incl eqpt in store) **120mm:** 920 2S12, 900 PM-38; **160mm:** 300 M-160; **240mm:** 430 2S4 SP

**SSM** (nuclear-capable) €200 SS-21 *Scarab* (*Tochka*), (all *Scud* and *FROG* in store)

**ATGW** AT-2 *Swatter*, AT-3 *Sagger*, AT-4 *Spigot*, AT-5 *Spandrel*, AT-6 *Spiral*, AT-7 *Saxhorn*, AT-9, AT-10

**RL** **64mm:** RPG-18; **73mm:** RPG-7/-16/-22/-26; **105mm:** RPG-27/-29

**RCL** **73mm:** SPG-9; **82mm:** B-10

**ATK GUNS** **57mm:** ASU-57 SP; **76mm;** **85mm:** D-44/SD-44, ASU-85 SP; **100mm:** 526 T-12/-12A/M-55 towed

**AD GUNS** **23mm:** ZU-23, ZSU-23-4 SP; **30mm:** 2S6 SP; **37mm;** **57mm:** S-60, ZSU-57-2 SP; **85mm:** M-1939; **100mm:** KS-19; **130mm:** KS-30

**SAM** some 2,465

220 SA-4 A/B *Ganef* (twin) (Army/Front wpn – most in store)

225 SA-6 *Gainful* (triple) (div wpn)

550 SA-8 *Gecko* (2 triple) (div wpn)

800 SA-9 *Gaskin*/SA-13 *Gopher* (2 twin) (regt wpn)

350 SA-11 *Gadfly* (quad) (replacing SA-4/-6)

200 SA-12A/B (*Gladiator/Giant*)

120 SA-15 (replacing SA-6/SA-8)

SA-19 (2S6 SP) (8 SAM, plus twin **30mm** gun)

SA-7, SA-14 being replaced by SA-16, SA-18

(man-portable), some SA-20

## Navy 155,000

(incl €16,000 conscripts, €11,000 Strategic Forces, €35,000 Naval Avn, 9,500 Coastal Defence Tps/Naval Infantry)

**SUBMARINES** 51 (excl other roles)

**STRATEGIC** 14

**TACTICAL** 37 (+15 reserve)

**SSGN** 7 *Oscar* II (+3 reserve) with 24 SS-N-19

*Shipwreck* USGW (VLS); T-65 HWT

**SSN** 15 (+6 reserve)

8 *Akula* (+2 reserve) with SS-N-21 *Sampson* SLCM, T-65 HWT

1 *Sierra* II (+2 reserve) with SS-N-21 *Sampson* SLCM, T-65 HWT

1 *Yankee* 'Notch' with 20+ SS-N-21 *Sampson* SLCM

5 *Victor* III with SS-N-15 *Starfish* SSM, T-65 HWT **SSK** 15

15 *Kilo* (with T-53 HWT)

**OTHER ROLES** 10

1 Delta Stretch SSAN, 1 *Yankee* Stretch SSAN,

3 Uniform SSAN, 1 *Yankee* Pod SSAN, 1 X-Ray SSAN, 1 10831 SSAN, 2 *Paltus* SSAN

**RESERVE** probably some *Kilo*

**PRINCIPAL SURFACE COMBATANTS** 27

**AIRCRAFT CARRIERS**+ 1 *Kuznetsov* CV (67,500t) capacity 20 ac Su-33 and 15–17 ASW hel or 36 Su-33 with 12 SS-N-19 *Shipwreck* SSM, 4 × 6 SA-N-9 *Gauntlet* SAM

**CRUISERS** 6

**CGN** 2 *Kirov* with 20 SS-N-19 *Shipwreck* SSM, 12 SA-N-6 *Grumble* SAM, SA-N-4 *Gecko* SAM, 2 × 130mm gun, 10 × 533mm ASTT, SS-N-15 *Starfish* SUGW, 3 Ka-25/-27 hel

**CG** 4

3 *Slava* with 8 × 2 SS-N-12 *Sandbox* SSM, 8 SA-N-6 *Grumble* SAM, 2 × 130mm gun, 8 × 533mm ASTT, 1 Ka-25/-27 hel

1 *Kara* with 2 × 2 SA-N-3 *Goblet* SAM, 2 SA-N-4 *Gecko* SAM, 10 × 533mm ASTT, 2 × 4 SS-N-14 *Silex* SUGW, 1 Ka-25 hel

**DESTROYERS** 14

**DDG** 14

5 *Sovremenny* with 2 × 4 SS-N-22 *Sunburn* SSM, 2 × 1 SA-N-7 *Gadfly* SAM, 2 × 2 130mm guns, 4 × 533mm TT, 1 Ka-25 hel

1 mod *Kashin* with 8 SS-N-25 *Svezda* SSM, 2 × 2 SA-N-1 *Goa* SAM, 2 × 76mm gun, 5 × 533mm ASTT

7 *Udaloy* with 8 SA-N-9 *Gauntlet* SAM, 2 × 100mm gun, 8 × 533mm ASTT, 2 × 4 SS-N-14 *Silex* SUGW, 2 Ka-27 hel

1 *Udaloy* II with 8 × 4 SS-N-22 *Sunburn* SSM, 8 SA-N-9 *Gauntlet* SAM, 8 SA-N-11 *Grisson* SAM, 2 CADS-N-1 CIWS, 2 × 100mm gun, 10 × 533mm ASTT

**FRIGATES** 6

**FFG** 6

2 *Krivak* II with 2 SA-N-4 *Gecko* SAM, 2 × 100mm gun, 8 × 533mm ASTT, 1 × 4 SS-N-14 *Silex* SUGW, 2 × 12 ASW RL

3 *Krivak* I (wpn as *Krivak* II, but with 2 twin 76mm guns)

1 *Neustrashimyy* with SA-N-9 *Gauntlet* SAM, 1 × 100mm gun, 6 × 533mm ASTT, 2 × 12 ASW RL

**PATROL AND COASTAL COMBATANTS** €86

**CORVETTES** 22

22 *Grisha* I, -III, -IV, -V, with SA-N-14 *Gecko* SAM, 4

## 106 Russia Part I

× 533mm ASTT, 2 × 12 ASW RL

### LIGHT FRIGATES 10

9 *Parchim* II with 2 SA-N-5 *Grail* SAM, 1 × 76mm gun, 4 × 406mm ASTT, 2 × 12 ASW RL

1 *Gepard* with 8 SSN-25 Switchblade SSM; 1 twin SA-N-4 Pop Group SAM; 1x 76mm gun, twin ADGS

### MISSILE CRAFT €43

€26 *Tarantul* PFM, 1 -I, 3-II, both with 2 × 2 SS-N-2C *Styx* SSM; 22 -III with 2 × 2 SS-N-22 *Sunburn* SSM

12 *Nanuchka* PFM 4 -I, 17 -III and 1 -IV with 2 × 3 SS-N-9 *Siren* SSM

2 *Dergach* PHM with 8 SS-N-22 *Sunburn* SSM, 1 SAN-4 *Gecko* SAM, 1 × 76mm gun

3 *Matka* PHM with 2 × 1 SS-N-2C *Styx* SSM

### TORPEDO CRAFT 8 *Turya* PHT with 4 × 533mm TT

1 *Mukha* PHT with 8 × 406mm TT

### PATROL CRAFT 3

COASTAL 3 *Pauk* PFC with 4 ASTT, 2 ASW RL

### MINE WARFARE €51

### MINE COUNTERMEASURES €51

#### OFFSHORE 11

2 *Gorya* MCO

9 *Natya* I and -II MSO

COASTAL €20 *Sonya* MSC

INSHORE €20 MSI<

### AMPHIBIOUS €22

LPD 1 *Ivan Rogov* with 4–5 Ka-27 hel, capacity 520 tps, 20 tk

LST 21

15 *Ropucha*, capacity 225 tps, 9 tk

5 *Alligator*, capacity 300 tps, 20 tk

LSM 1 *Polnochny*, capacity 180 tps, 6 tk (may be non-op)

Plus about 21 craft: about 6 *Ondatra* LCM; about 24 LCAC (incl 2 *Pomornik*, 6 *Aist*, 3 *Tsaplya*, 9 *Lebed*, 1 *Utenok*, 2 *Orlan* WIG and 1 *Utka*)

Plus about 80 smaller craft

### SUPPORT AND MISCELLANEOUS about 436

#### UNDER WAY SUPPORT 28

1 *Berezina*, 5 *Chilikin*, 22 other AO

#### MAINTENANCE AND LOGISTIC about 271

some 15 AS, 38 AR, 20 AOT, 8 msl spt/resupply, 90 AT, 9 special liquid carriers, 8 AWT, 17 AK, 46 AT/ARS, 13 ARS, 7 AR/C

#### SPECIAL PURPOSES about 57

some 17 AGI (some armed), 1 msl range instrumentation, 7 trg, about 24 icebreakers (civil-manned), 4 AH, 4 specialist spt vessels

#### SURVEY/RESEARCH about 80

some 19 naval, 61 civil AGOR

### MERCHANT FLEET (aux/augmentation for sealift, RF-owned ships)

1,628 ocean-going veh over 1,000t: 340 tkr, 116 dry bulk, 33 container, 1,139 other

## NAVAL AVIATION (€35,000)

### ORGANISATION

4 Fleet Air Forces, each organised in air div; each with 2–3 regt of HQ elm and 2 sqn of 9–10 ac each; recce, ASW, tpt/utl org in indep regt or sqn

Flying hours 40

### EQUIPMENT

266 cbt ac; 161 armed hel

### AIRCRAFT

BBR 58 Tu-22M

FGA 58 Su-24, 10 Su-25, 49 Su-27

ASW 28 Tu-142, 43 Il-38, 20 Be-12

MR/EW 18 An-12

TPT 37 An-12/An-24/An-26

### HELICOPTERS

ASW 120 Ka-27

MR/EW 8 Mi-8

CBT ASLT 30 Ka-29, 11 Mi-24

TPT 66 Mi-8

### MISSILES

ASM AS-4 *Kitchen*, AS-7 *Kerry*, AS-10 *Karen*,

AS-11, *Kelger*, AS-13 *Kingbolt*

## COASTAL DEFENCE (9,500)

(incl Naval Infantry, Coastal Defence Troops)

### NAVAL INFANTRY (Marines) (7,500)

1 inf 'div' (2,500: 3 inf, 1 tk, 1 arty bn) (Pacific Fleet)

3 indep bde (4 inf, 1 tk, 1 arty, 1 MRL, 1 ATK bn),

1 indep regt, 3 indep bn

3 fleet SF bde (1 op, 2 cadre): 2–3 underwater,

1 para bn, spt elm

### EQUIPMENT

MBT 160: T-55M, T-72, T-80

RECCE 60 BRDM-2/*Sagger* ATGW

AIFV €150 BMP-2, BMP-3, some BRM-1K

## CASPIAN SEA FLOTILLA

**BASE** Astrakhan (RF)

The Caspian Sea Flotilla has been divided between  
 Az (about 25%), RF, Kaz and Tkm, which are  
 operating a joint flotilla under RF comd currently  
 based at Astrakhan

**SURFACE COMBATANTS** about 36

10 patrol and coastal combatants, 5 MCMV, some 6  
 amph, about 15 spt

## PACIFIC FLEET (HQ Vladivostok)

**BASES** Vladivostok, Petropavlovsk Kamchatskiy,  
 Magadan, Sovetskaya Gavan, Fokino

#### SUBMARINES 11

**strategic** 4 SSBN **tactical** 7 (plus 2 reserve)  
 (2 SSGN, 3 SSN plus 2 reserve)

#### PRINCIPAL SURFACE COMBATANTS 8

1 CG/CGN, 5 DDG, 2 FFG

**OTHER SURFACE SHIPS** about 30 patrol and  
 coastal combatants, 8 MCMV, 4 amph, some 57 spt  
 and misc

## NAVAL AVIATION

### EQUIPMENT

50 cbt ac; 37 armed hel

### AIRCRAFT

**BBR** 14 Tu-22M • **ASW** 12 Tu-142, 24 Il-38 •  
**MR/EW** 10 An-12

### HELICOPTERS

**ASW** 31 Ka-27 • **CBT ASLT** 6 Ka-29  
**TPT** 26 Mi-8

## Military Air Forces (VVS) €184,600 (incl conscripts)

The Military Air Forces comprise Long Range  
 Aviation Cmd (LRA), Military Transport Aviation  
 Cmd (VTA), 5 Tactical/Air Defence Armies  
 comprising 49 air regts. Tactical/Air Defence roles  
 includes air defence, interdiction, recce and tactical air  
 spt. LRA (6 div) and VTA (9 regt) are subordinated to  
 central Air Force comd. A joint CIS Unified Air  
 Defence System covers RF, Arm, Bel, Ga, Kaz, Kgz,  
 Tjk, Tkm, Ukr and Uz.

**Flying hours** Average annual flying time for LRA is

## 108 Russia Part I

about 25 hours, for Tactical/Air Defence about 20-25 hours, and for VTA approximately 60 hours

### LONG-RANGE AVIATION COMMAND (37th Air Army)

4 hy bbr regt (strategic) – see page 89

4 hy bbr div (non-strategic), plus 1 hy bbr trg centre  
116 Tu-22M3/MR (plus others in store)

TKR 20 Il-78/Il-78M

TRG 8 Tu-22M-3, 30 Tu-134

### TACTICAL AVIATION

BBR/FGA some 606: 371 Su-24, 235 Su-25

FTR some 908: 5 MiG-25, 255 MiG-29, 392 Su-27 (incl  
5 Su-27SMK), 256 MiG-31

RECCE some 214: 70 MiG-25, 144 Su-24

AEW AND CONTROL 20 A-50/A-50U

ECM 60 Mi-8

TRG 2 centre for op conversion: some 90 ac incl 20  
MiG-29, 35 Su-24, 15 Su-25

2 centre for instructor trg: 53 ac incl 16 MiG-29, 16  
Su-24, 10 Su-25, 11 Su-27

SAM 37 SAM regt

Some 1,900 SA-10/S-300. First SA-20/S-400 unit  
deployed near Moscow

### MILITARY TRANSPORT AVIATION COMMAND (VTA)

(61st Air Army)

2 div, total 9 regt, 271 ac; plus 4 indep regts

#### EQUIPMENT

some 318 ac, incl Il-76M/MD/MF, An-12, An-124  
1 An-22 regt (21 ac) directly under MoD control

CIVILIAN FLEET 1,500 medium- and long-range  
passenger ac, incl some 350 An-12 and Il-76

HELICOPTERS (formerly part of Army Aviation)  
£1,700 (with 600 in store) incl

ATTACK £700 Mi-24, 8 Ka-50 *Hokum*, some  
Mi-28N

RECCE 140 Mi-24, some Ka-52

TPT Mi-6, Mi-8/-17 (some armed), Mi-26 (hy)

### AIR FORCE AVIATION TRAINING SCHOOLS

TRG 5 mil avn institutes subordinate to Air Force

HQ: some 980 ac incl L-39, Tu-134, Mig-23, Mig-29,  
Su-25, Su-27

### OPERATION COMBAT AIRCRAFT

based west of Urals (for all air forces other than  
maritime)

ac 1,736: 413 Su-24 • 172 Su-25 • 296 Su-27 • 81  
MiG-25 • 445 MiG-29 • 237 MiG-31 • 63 Tu-22M  
• 29 Tu-22. Some of these, plus 194 Su-17, 52 Su-  
22, 359 MiG-23, 93 MiG-27 are decommissioned  
ac in store. £700 armed hel

## Deployment

Deployment of formations within the Atlantic to the  
Urals (ATTU) region is reported to be 2 TD, 8 MRD,  
perhaps 4 AB, 1 arty div, 9 indep arty, 3 MRL, 7 MR,  
8 SSM, 12 SAM bde.

The following assessment of units within the ATTU  
region is based on the latest available information.

Above 75% – possibly 3 ABD, all MR bde and 1 AB  
bde; above 50% – possibly 1 TD, 6 MRD, 1 ABD, 1  
arty bde. The remainder are assessed as 20–50%.

Units outside the ATTU are likely to be at a lower  
level. All bde are maintained at or above 50%. TLE in  
each MD includes active and trg units and in store

### KALININGRAD OPERATIONAL STRATEGIC GROUP

These forces are commanded by The Ground and  
Coastal Defence Forces of the Baltic Fleet.

GROUND 10,500: 1 MRD (cadre), 1 MR bde, 1 SSM  
bde, 1 SAM regt, 1 indep MRR (trg), 1 attack hel  
regt, 811 MBT, 865 ACV (plus 374 lookalikes), 345  
arty/MRL/mor, 18 SS-21 *Scarab*, 16 attack hel

NAVAL INFANTRY (1,100)

1 regt (26 MBT, 220 ACV, 52 arty/MRL) (Kaliningrad)

### COASTAL DEFENCE

2 arty regt (133 arty)

1 SSM regt: some 8 SS-C-1b *Sepal*

AD 1 regt: 28 Su-27 (Baltic Fleet)

SAM 50

### RUSSIAN MILITARY DISTRICTS

#### LENINGRAD MD (HQ St Petersburg)

GROUND 34,400: 1 ABD; plus 2 indep MR bde,  
2 arty bde, 1 SSM, 1 SF, 4 SAM bde; 1 ATK, 1 MRL,  
1 aslt tpt hel regt. 320 MBT, 103 ACV (plus 2,250  
lookalikes), 690 arty/MRL/mor, 18 SS-21 *Scarab*,

regt) and Presidential Guard regt

#### **FEDERAL COMMUNICATIONS AND INFORMATION**

**AGENCY** €54,000

## Middle East and North Africa

The Middle East remains a region where the maintenance of standing forces for national rather than collective defence continues to characterise inventories. The **Israeli** Defence Force maintains a high level of manning, at an estimated 168,000 personnel, with its prime military tasks being the suppression of threats emanating from Palestinian territory, sustaining a sea-based security screen and the protection of its northern perimeter against threats from Lebanon or Syria. However, the perceived increase in the threat posed by **Iran's** ballistic missile programme is becoming the priority for Israeli defence planners. The victory of hardline conservative political elements in Iran's February general elections, with continuing concerns over Tehran's nuclear ambitions and the country's anti-US posture provide more grounds for concern over regional security. However, **Libya's** voluntary disarmament effort showed an alternative path to tackling the issue of the proliferation of weapons of mass destruction (WMD), as well as improving Middle Eastern security more generally.

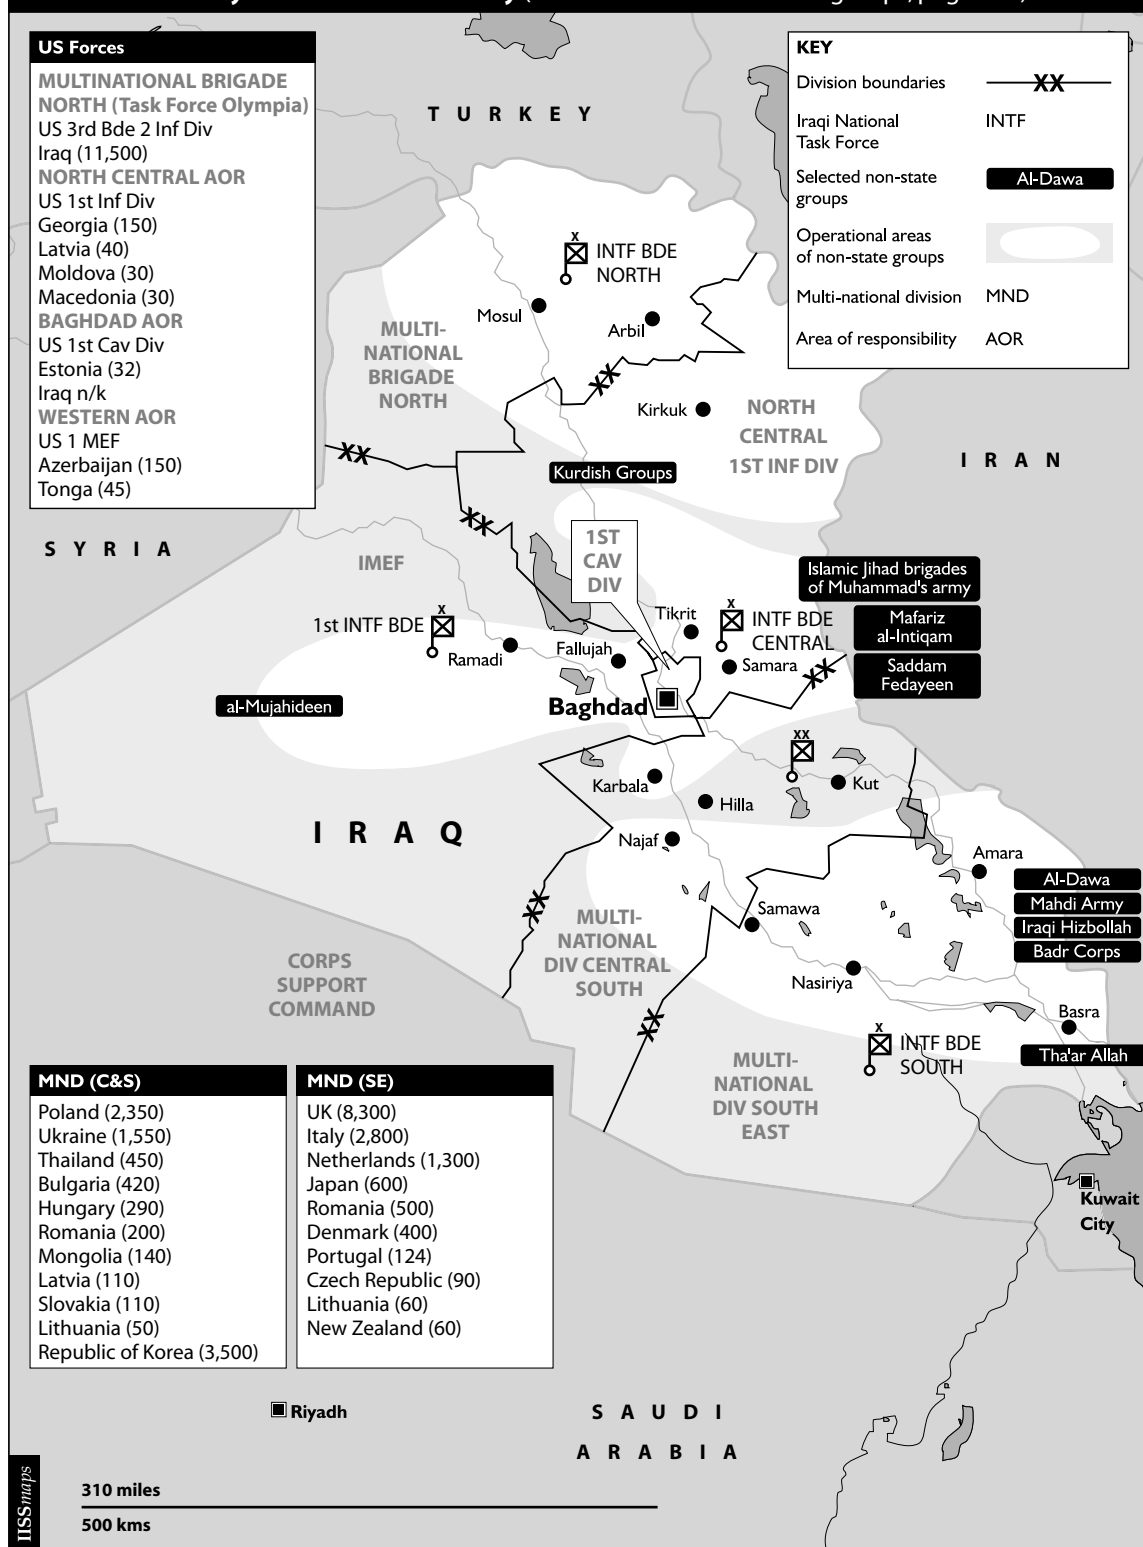

The continuing US military presence in **Iraq** provides a focus for Islamic non-state armed groups, many of whom have chosen the country as the battlefield of the moment. Anti-regime and Western sentiment has also emerged in Saudi Arabia, with the security forces launching a series of clampdowns on Islamist extremists, and killing or capturing a number of key players, though many remain at large. **Yemen** is seeing an armed insurrection by armed bands north of the capital Sana'a; some have posited an al-Qaeda link. Yemeni government forces were, as of mid-August, continuing offensive operations. Meanwhile, the Israeli-Palestinian conflict continues to be quoted as a key motivating factor in much Islamist violence. This comes as Israel, which many Arabs view as inextricably linked to the US, hardens its defensive posture.

### Iraq

Following the handover of sovereignty to the Iraqi interim administration on 28 June 2004, 121,600 US troops remained in Iraq as of mid-August, with around 34 other countries providing some 25,000 troops under a UN mandate authorising the Multinational Force (see overleaf). Programmes to train Iraqi security forces are continuing, with the US, UK, Jordan and NATO playing the key roles in this process. Jordan has offered broader assistance to the new Iraqi regime: in September 2003, Amman began to help the US track the remnants of Saddam's regime and announced its willingness to provide security force training assistance. Furthermore, in July 2004 King Abdullah offered military support to the Iraqi Prime Minister, Iyad Allawi, should he request it.

Opposition to the coalition presence in Iraq grew following the declared end of major combat operations in May 2003. International organisations and non-governmental organisations (NGOs) trying to assist reconstruction were also targeted because they constituted, for some, symbols of the West. The truck-bombing of the UN headquarters in Baghdad on 19 August 2003 bore witness to this as did the subsequent attack on the headquarters of the International Committee of the Red Cross (ICRC). Twenty-two died in the attack on the UN headquarters, including the UN Secretary General's special envoy, Sergio Vieira de Mello. The 29 August 2003 bomb attack that killed Ayatollah Mohammad Baqr Hakim, moderate Shia leader and head of the Supreme Council for the Islamic Revolution in Iraq as well as over 100 others, and the 20 September 2003 shooting of Iraqi Governing Council member Aqila al-Hashimi, demonstrated that any link to the US-led reconstruction of the country would be targeted.

The insurgency continued throughout the winter despite the capture of former Iraqi President Saddam Hussein on 13 December near Tikrit. Moreover, failure to secure Iraq's borders led to the infiltration of foreign fighters. As well as Iraq's challenging topography, this problem was exacerbated by the decision by the Coalition Provisional Authority (CPA) to disband Iraq's previous security structures; further, in April 2004, Ambassador Paul Bremer, head of the CPA, said that de-Ba'athification had been 'poorly implemented', when he announced the reconstitution of the Iraqi army and civil defence force.

**Outline of Military and Non-State Activity** (see list of non-state armed groups, page 362)

In early 2004, the tactics of the insurgency shifted from targeting high-profile leaders for assassination to targeting the new Iraqi security forces and oil pipelines in Iraq, thus attempting to prevent normality returning to the country. A series of explosions in Karbala and Baghdad on 2 March 2004, which targeted Shias on their holy day of Ashura, killed over 140 people. Given the previous focus on attacks in the so-called 'Sunni triangle', the move to attack Shia religious targets perhaps demonstrated a broader-based insurgency encompassing both Sunni and Shia areas with the possible aim of encouraging further sectarian conflict.

Following the 31 March mob killing and mutilation of four US contractors, Fallujah was sealed off, and was subjected to intense military activity by US forces. Meanwhile, the issue of a warrant for the arrest of Shia cleric Moqtada al-Sadr, in connection with the early-2003 murder of cleric Abdul Majid al-Khoei, as well as the CPA's closure of a Sadr-related newspaper, led to clashes between coalition troops in Najaf and Baghdad. Meanwhile, al-Sadr's call to arms was aimed not just at the Shia, but at a nationalist audience. Subsequent uprisings by both Sunni and Shia groups spread from Kirkuk in the north to Kut in the south with the coalition losing control of several areas and Shia groups assuming complete control in Najaf and Kut. In a change of tactics in late April, US marines, whose approach to operations in Iraq in general has differed from that of the US Army, pulled out of Fallujah and allowed a newly created Iraqi security force, the Falluja Protective Army – led by former Republican Guard General Jasim Mohammed Saleh – to take control.

In the month before the handover of sovereignty to the interim Iraqi administration, the nominated Prime Minister, Iyad Allawi, reached an agreement with many of the militias to prevent an upsurge in violence. However, the agreement did not include the Mehdi army and tensions with Moqtada al-Sadr remained unresolved. UN Security Council Resolution 1546 confirmed the handover and approved a US-led multinational force to secure the country until Iraqi forces can assume responsibility. With only 200,000 Iraqi troops and police trained by the end of June, the presence of coalition forces is assured, at least in the short term. Violence flared again in July and August 2004, when al-Sadr re-ignited his insurgency by confronting the US and Iraqi authorities in Najaf. Sadr's forces were using Shia holy sites as base areas, knowing it would be problematic for military action to be taken against them. With violence occurring across the country, it was apparent in mid-August that Iraqi security forces were far from ready to take on the challenge posed by insurgent groups.

### Some military lessons

Having started with a fast and successful warfighting campaign, *Operation Iraqi Freedom* provided some key lessons for the US and allies concerning post-conflict operations. Amongst these lessons, the two most important were that, firstly, post-conflict and peace support operations in all their phases are manpower intensive and require extra skills in addition to those used in the warfighting phase – as well as a fast transition from a combat posture to one which demands that support to the civilian population becomes paramount. Secondly, the use of partially trained reservists, or reservists with the wrong skills, is no substitute for fully trained soldiers, as the US learned to its cost in the Iraq prison abuse scandal. Nor does the employment of personnel from private military companies provide the answer to the manpower problem: the lack of oversight on their activities, given their separate organisational structures, is allied to their lack of accountability.

### Iran

From the perspective of the clerical establishment in Tehran, Iran's internal and regional security situation improved significantly in 2004. In February, the conservatives successfully engineered Parliamentary elections and marginalised reformist elements, in all likelihood paving the way for election of a conservative candidate to replace President Khatami in 2005. Regionally, Iran's fear of encirclement by a

US presence in Afghanistan and Iraq has given way to greater confidence that Washington does not have the will to maintain a long-term security presence on Iran's borders, and that US difficulties in Iraq have weakened US leverage and options to confront Iran over its nuclear programme. However, tensions with Washington over the nuclear issue and accusations that Tehran has assisted Shia insurgent groups in Iraq, as well as terrorist groups more widely, are likely to continue.

**The nuclear issue.** In September 2003, the IAEA Board of Governors passed a resolution demanding that Iran should declare details of its nuclear programmes to the UN by 31 October 2003. Further, in response to international pressure over its nuclear programme, Iran reached agreement with the EU-3 (UK, France, Germany) on 21 October 2003, undertaking to 'engage in full cooperation with the IAEA...'; sign the IAEA Additional Protocol; and 'suspend all uranium enrichment and reprocessing activities as defined by the IAEA'. Despite these commitments, however, Iran failed to suspend its enrichment programme nor fully cooperate with the IAEA. On 18 June 2004, the IAEA Board of Governors adopted a resolution saying that it 'regrets that those commitments [entered into by Iran] have not been comprehensively implemented and calls on Iran immediately to correct all remaining shortcomings, and to remove the existing variance in relation to the Agency's understanding of the scope of Iran's decisions regarding suspension, including by refraining from the production of UF<sub>6</sub> and from all production of centrifuge components, as well as to enable the Agency to verify fully the suspension.' In late July, remarks attributed to Kamal Kharrazi, the Iranian foreign minister, indicated that Tehran had started to manufacture centrifuge parts. Meanwhile, with the IAEA's General Conference planned for September 2004, Hossein Mousavian, of the Supreme National Security Council's foreign policy committee noted in August (according to press reports) that 'if the Board of Governors' resolutions follow the same trend as before, we may reconsider our agreements while maintaining Iran's commitment to the NPT and safeguards treaties.' Iran's longstanding nuclear works at Bushehr continue, with Russia maintaining its assistance to Washington's frustration. However, a delay involving the delivery of fuel (until 2006) has been announced by Moscow. (For some background information on Iran's recent nuclear activities, see *The Military Balance* 2003•2004, pp.102–103.)

Reformist President Khatami's attempts to improve relations with the West suffered as a result of the conservative stance towards coalition operations in Iraq and Afghanistan, along with the international pressure to disclose the extent of Iran's nuclear programmes. His position was further weakened by failures in domestic policies, which were not helped by conservative domination of key regime power structures. These also impacted on the February 2004 elections, with the Guardian Council banning some 80 reformist candidates from re-election, and preventing several thousand pro-reform candidates from taking part in the elections. Turnout in the elections was low, reflecting widespread disenchantment with the political process: the enthusiasm for Khatami that was widespread in 1997 has been, for many, replaced with political apathy and resignation, compounded by an increase in state repression. President Khatami is due to stand down in May 2005 and is likely to be replaced by a conservative.

With the conservatives now firmly in power, and the restraining influence of the reformers waning, defence and security issues achieve greater significance for relations with the US, and the west in general. In this respect, the position of the Iranian Revolutionary Guard Corps (IRGC) is critical as the country's key strategic and military assets including weapons programmes are directly under its control, and the IRGC is, to all intents and purposes, the military guardian of the revolution. (Iran maintains a separate regular army, navy and air force.) Assuming that Iran lifts the suspension on its enrichment programme, it is still probably a few years away from full scale production of enough enriched uranium for a small nuclear arsenal. However, under IGRC direction, the deployment of *Shahab-3*/*Zelzal-3* ballistic missiles – with a range of some 1,000 kilometres – commenced last year with between three and six launchers coming into service. In the near term, the programme is expected to achieve a production rate of about 20 missiles a year. Meanwhile, tests designed to improve range and accuracy, such as those announced on 11 August by Rear-Admiral Ali Shamkhani, Iran's defence minister, are continuing.

## Israel–Palestine

The 'Road Map' peace plan, which was proposed in 2003 by the 'Quartet' comprising the US, EU, Russia, and the UN, has made little impact on the Israel–Palestine conflict, largely due to the dearth of bilateral concessions. Consequently, intensive operations by the Israel Defence Forces (IDF) and attacks by Palestinian militants have continued to cause heavy casualties.

On 18 December 2003, Ariel Sharon announced Israel's intention to resort to unilateral disengagement should the Palestinians not be able to provide a suitable negotiator for the 'Road Map' within six months. Moreover, construction of the 115km security barrier separating Israel from the West Bank, complementing the existing Gaza security barrier, has also continued. This resulted in the International Court of Justice issuing its Advisory Opinion on 9 July 2004 that '... the construction by Israel of a wall in the Occupied Palestinian Territory and its associated regime are contrary to international law...'.<sup>1</sup>

Nevertheless, a reduction in the number of terrorist attacks inside Israel has been claimed as vindication of the strategy by those Israelis in favour of the barrier. Attacks on targets such as military checkpoints have continued, though. Prime Minister Sharon's disengagement plan proposal, to dismantle Israeli settlements in the Gaza Strip and withdraw the IDF from the area while maintaining control of the West Bank, was endorsed by President Bush on 14 April 2004. In early May, however, Sharon's Likud Party voted against the plan in a referendum, although after amendments, the plan was approved by the Israeli Cabinet on 6 June 2004. Nevertheless, in a second internal vote in August, Likud again voiced its opposition.

**Counter-terrorism strategy.** The IDF's use of targeted assassinations against militant leaders in the Gaza Strip has continued. On 22 March 2004, an Israeli missile strike assassinated Sheikh Ahmed Yassin, the spiritual leader of Hamas, after a previous attempt failed in September 2003. The killing elicited popular and official protest from Europe and the Muslim world. Then, on 17 April 2004, the head of Hamas in Gaza, Dr Abdel-Aziz al-Rantisi, was also assassinated. Israel claims that a reduction in the number of attacks in the West Bank and launched from Gaza are a vindication of the 'targeted assassination' policy, despite international condemnation of extra judicial killings by Israeli forces. Moreover, the assassinations have resulted in the Hamas political leadership shifting its centre from Gaza to Damascus. The head of the group's political bureau, Khaled Mashaal, has directed that Rantisi's successor should remain secret.

In addition to the assassinations and the construction of the security barrier, Israel has targeted the known financial apparatus used by militant groups, and has reoccupied territory ceded to the Palestinian Authority (PA) under the 1993 Oslo Accords. The start of the IDF's *Operation Rainbow* on 13 May 2004, led to the widespread bulldozing of Palestinian dwellings in the Rafah refugee camp, close to the Egyptian border, in an attempt to prevent weapons smuggling from Egypt to Gaza using tunnels. Although the operation has antagonised militants, and has attracted the attention of the international media, the reduction in access through the tunnels seems to have reduced these groups' operational capacity.

**Militant groups** have continued to use the tactics of suicide bombing, shooting and rocket attacks against Israeli targets, despite frequent retaliatory incursions and missile attacks by Israeli forces in the West Bank and Gaza. Having broken their June 2003 ceasefire, Hamas, Islamic Jihad and Fateh, carried out a series of suicide bomb attacks in Tel Aviv and in a Jewish settlement in the West Bank on 12 August 2003, and followed this with an attack in Jerusalem on 19 August 2003 which killed 20 Israeli civilians. Islamic Jihad carried out a high profile attack in Haifa on 4 October 2003, targeting a Palestinian-owned restaurant frequented by Israelis. This indicated the militants' willingness to target not only Israelis, but also Palestinians seen to be cooperating with Israel. Furthermore on 14 January 2004, Hamas used – for the first time – a female suicide bomber in an attack at the main Erez crossing in the Gaza Strip. Further, on 24 March 2004 a 14-year-old boy was stopped at an Israeli checkpoint at Haware with a bomb under his jacket. One week before, an 11-year-old boy was stopped in the same place carrying a bomb in a bag. These incidents suggest that Israel's preventative measures have been increasingly successful and militant leaders have had to rethink their means of delivery, with one outcome being greater recruitment of women and children.

The immediate political effect of the attacks which ended the truce was the resignation of **Palestinian Authority** Prime Minister Mahoud Abbas (Abu Mazen) on 6 September. This followed the first, unsuccessful Israeli missile attack on Yassin. Abbas had continually struggled for authority with Yasser Arafat but was unable to control either the Palestinian security forces or the militants. On 10 November 2003 Ahmad Qurei, the former speaker of the Palestinian Legislative Council (PLC), replaced Abbas as the Palestinian Prime Minister. Qurei faced many of the same problems as Abbas, and on 17 July 2004 Qurei submitted his resignation, following the 16 July abduction of the Gaza police commander (Khaled Abu Ula) by the Jenin Martyrs Brigade. The same group also abducted four French aid workers. In subsequent unrest, 'old-guard' Arafat loyalists fought with 'new-guard' reformists, who were calling for an end to corruption within the Palestinian Authority government and security forces. Despite the fact that on 21 July the Palestinian Cabinet called on Arafat to accept Qurei's resignation (in order that it could appoint a new government empowered to carry out reforms), Arafat rejected the resignation and sought to defuse the crisis by condensing the number of Palestinian security services from 13 to three, placing them under the overall command of his nephew Musa Arafat. Arafat subsequently revoked this appointment and reinstated Abd al-Razzaq Majaida as the overall head of the security forces. However, Musa remains in charge in Gaza.

In a sign of greater international involvement, **Egypt's** President Hosni Mubarak discussed a role for Egypt in securing Gaza with President Bush in April 2004. However, on 22 June 2004, ten leading Palestinian militant groups including Hamas, Islamic Jihad and Fateh, signed a joint statement condemning any plans for either Egypt or Jordan to get involved in Gaza after an Israeli withdrawal.

**Military developments.** Israel has placed increasing emphasis on its use of precision guided munitions. This has allowed a reduction in the need to deploy ground forces to conduct certain operations. Moreover, the delivery of 700 Joint Direct Attack Munition (JDAM) tail kits in March 2004 increased the accuracy of previously 'dumb' bombs. Further, 102 F-16Is are currently being delivered by the US at the rate of two per month, in order to replace some 70 F-4s and 39 A-4s. Given that the A-4s are being retained for advanced fighter training, the arrival of the F-16Is will greatly increase IAF strike potential, both qualitatively and quantitatively. Further cooperation between Israel and the US was evident with the successful testing of the *Arrow-2* anti-ballistic missile system off the coast of California on 29 July 2004. Israel is planning to deploy a third *Arrow-2* battery to boost its defence against what is perceived to be an increasing missile threat from Iran. Tehran is believed to have improved the range and accuracy of its *Shahab-3* missile in order to increase its ability to hit targets in Israel. It is believed that this is intended to give a deterrent signal to the US. Meanwhile, in June 2004, Israel Military Industries (IMI) unveiled Israel's first surface-to-surface missile. The new weapon is an adaptation of the air-launched *Delilah* cruise missile. It is said to have a range of over 300km, which would enable it to reach all neighbouring capitals, including Damascus and Beirut – but not Tehran. IMI would not comment on the cruise missile's payload capacity but the *Delilah* can carry up to a 30-kilogram (66-pound) high-explosive warhead or a range of other payloads. Israel is also reportedly seeking to develop longer-range cruise missiles which could be launched from submarines.

## Israel–Syria–Lebanon–Hizbullah

Tension remained high between Israel and Syria due to the latter's continued support for the **Lebanon**-based Hizbullah organisation. Hizbullah blamed Israel for the death of Ali Hussein Saleh, one of their operatives who was killed in a car bomb in Beirut on 2 August. In retaliation, a number of rocket, mortar and machine-gun attacks were launched on Israeli border posts in the Shebaa Farms area of the Golan Heights. This, in turn, led to retaliatory air strikes and artillery fire on Hizbullah positions in southern Lebanon by the Israeli Air Force (IAF). Following the bombing of the Maxim restaurant in Haifa on 4 October 2003, IAF aircraft attacked the Ein Saheb camp deep inside Syria one day later. This marked the

first Israeli attack on Syrian soil for 20 years, and was carried out, according to the IAF, on an Islamic Jihad training camp.

On 20 January 2004, Israeli aircraft attacked two Hizbullah bases in Lebanon's Bekaa Valley in response to the killing of an Israeli soldier on the border. Further air strikes took place in March, May, and June. The March attacks were in response to Hizbullah artillery strikes on northern Israel, which were apparently an act of solidarity with Hamas following the assassination of Sheikh Ahmed Yassin on 22 March. Meanwhile, on 5 June 2004, Israeli aircraft targeted bases of the Damascus-based Popular Front for the Liberation of Palestine-General Command in the hills near Naameh, just a few kilometres south of Beirut.

A controversial prisoner exchange took place between Israel and Hizbullah on 29 January 2004. This followed three years of negotiations carried out under the auspices of the German Coordinator of Federal Intelligence Services. An exchange of 429 Lebanese and Palestinian prisoners and 59 Hizbullah bodies for the bodies of three dead Israelis and Elhanen Tannenbaum, a reserve Colonel in the Israeli military, took place in January 2004. Following his return to Israel, Tannenbaum was subjected to some scrutiny with regard to his activities when he was kidnapped. Among those released north was the Hizbullah leader, Sheikh Abdel Karim Obeid, who had spent 15 years in an Israeli prison. The success of this Hizbullah tactic set a precedent, in that Hamas and Islamic Jihad then threatened to kidnap Israeli soldiers in order to use them as bargaining chips for future prisoner exchanges.

In November 2003 the US Congress approved economic and trade sanctions against Syria for supporting terrorism, continuing its occupation of Lebanon, pursuing weapons of mass destruction and missile programmes, and undermining US and international stabilisation and reconstruction efforts in Iraq. The US claimed that \$3bn belonging to Saddam was held in Syrian banks. Moreover, Damascus was accused, on 21 June 2004, of sanctioning the transfer of financial support for insurgent operations in Iraq through Syria, and allowing the transit of fighters into Iraq. Meanwhile, in a 5 January 2004 tacit admission of WMD-possession, President Assad announced that Syria would not dismantle its WMD unless Israel also disarmed.

Earlier, in a tentative conciliatory gesture in November 2003, President Assad offered to reopen a dialogue with Israel over the Golan Heights. This outstanding territorial issue has given Syria a pretext for occupying Lebanon, whilst provoking Israel and remaining a source of inspiration for the Palestinian territorial campaign. Neither the US nor Israel agreed to the proposition, and US President George W. Bush announced the start of economic sanctions against Syria in May 2004.

## GCC

Some analysts express the hope that, with the removal of the conventional threat from Iraq, there may be a more active collective defence strategy in the Gulf, if not the wider region. The Gulf Cooperation Council provides the vehicle for this, but has been relatively inactive so far in constructing joint forces.

In 2005, **Oman** is scheduled to receive delivery of 12 F-16C/D Block-50 fighters. Muscat also wants to purchase laser-guided and general purpose munitions, as well as JDAM guidance kits. The upgrade is designed to upgrade coastal and oil-field defence. **Qatar** continued to cooperate with the US by hosting US troops for Iraq-related operations (for background information on recent Qatari-US military relations, see *The Military Balance 2004•2004*, pp. 97–98). Meanwhile, the UAE has provided aid assistance to Iraq's reconstruction.

In addition to the US attempt to secure a role for **Egypt** as an intermediary in the Israel–Palestine conflict, Washington and Cairo are also discussing an option to establish a depot for the maintenance and repair of US and NATO military equipment in Egypt. The option, put forward by Cairo as part of an effort to increase Egypt's ties with the Alliance, would include pre-positioning NATO equipment on Egyptian territory. Such equipment could be used for an emergency in the Middle East and North Africa as well as during regional military exercises held in Egypt.

**Internal security**

**Saudi Arabia** has continued to combat militants with al-Qaeda connections, who have carried out repeated attacks against regime and Western interests, as well as foreign nationals living in the country. These have included expatriate Arab workers, as well as Western staff and families. In response, Saudi security forces have been successful in detaining and killing several key militants, including Abdel Aziz al-Muqrin, who was reportedly the leader of a group calling itself the 'al-Qaeda Organisation in the Arabia Peninsula', and who was implicated in the murder of US defence contractor Paul Johnson. In June 2004, Saudi television carried an offer of amnesty from the King to militants who gave themselves up voluntarily. The amnesty did not yield large numbers, notwithstanding the surrender of Khalid bin Odeh bin Mohammed al-Harbi, an individual who according to press reports had appeared in a video with Osama bin Laden praising the 11 September attacks. Al-Harbi surrendered after making contact with the Saudi embassy in Tehran.

In **Yemen**, Sa'ada province, north of the capital Sana'a – long an area of tribal and religious strength – has seen the death of a number of soldiers and rebels during operations against a rebel base in the Maran district. Some have posited an al-Qaeda link to the forces led by militant cleric Hussein Badruddin al-Houthi. Meanwhile, in an indication of its continued commitment to the US-led 'war on terror', and with US assistance, Yemen's armed forces have purchased additional tanks and aircraft from Russia in a bid to enhance their capabilities.

**North Africa***Non-Proliferation Diplomacy*

In **Libya** a mix of pressures and inducements led to a success for non-proliferation diplomacy when on 19 December 2003 Libya, Britain and the United States announced a disarmament deal whereby Libya would abandon its weapons of mass destruction (WMD) capabilities in return for improved relations with Britain and the US. By late December 2003, International Atomic Energy Agency (IAEA) inspections were taking place, and by January 2004 the US was removing sensitive components and equipment from Libya. The breakthrough followed Libya's August 2003 admission of responsibility for the Lockerbie bombing over Scotland in December 1988, and the subsequent lifting of United Nations Security Council sanctions on 2 September 2003. These sanctions had crippled Libya's oil industry for the previous 11 years.

Although Libya initially only offered to declare and dismantle its chemical weapons programme, it was forced to acknowledge its uranium enrichment programme in early October 2003 when American, British, German and Italian forces collaborated to intercept the *BBC China*, a German flagged ship. The vessel was carrying some 1,000 fully assembled gas centrifuges bound for Libya from Dubai. Subsequent negotiations led to an agreement on 10 March 2004 allowing UN inspectors to conduct snap inspections of Libya's nuclear facilities. On 5 March 2004, Tripoli disclosed that it had produced and stored some 23 tonnes of mustard gas. The Organisation for the Prohibition of Chemical Weapons (OPCW) reports that Libya has turned over to it more than a dozen folders containing details of the illicit weapons programme. Libya then started to destroy more than 3,000 unfilled chemical bombs at the end of March 2004 and the OPCW is overseeing the destruction of the mustard agent and chemical precursors by the end of the year. Libya's cooperation led to warmer relations with Britain from February 2004, the US lifting of economic sanctions against Libya in April 2004 and the normalisation of diplomatic relations with the US for the first time in 24 years in late June 2004.

In **Algeria**, the al-Qaeda related Salafist Group for Preaching and Combat (GSPC) stepped up attacks against military and foreign targets, with the aim of disrupting the April 2004 national elections. However, despite fears of a resurgence in Islamic fundamentalism, the elections suffered little disruption and President Abdelaziz Bouteflika (who is credited with subduing the post-1992 Islamist insurgency), was re-elected with 83% of the vote. The election was deemed fair by international observers. Algeria has made substantial progress towards eliminating terrorism, and it is estimated that the number of active terrorists

in the country has dropped from around 25,000 in 1992 to some 100 in May 2004. Some 500 GSPC and Armed Islamic Group (GIA) members surrendered from April 2004 onwards, following an earlier Presidential amnesty for those insurgents who turned in their weapons. The US has been helping Algeria combat the GSPC's activities in the Sahara Desert.

Bouteflika, who is considered a strong counter-terrorism partner of the US, was given technological assistance to boost the counter-terrorism campaign against the GSPC and the GIA. In return, the US has asked Algeria for landing rights for American military aircraft, and Algiers and Washington have discussed the prospect of long-term access by the US military to Algeria – not including a permanent military presence, but rather the provision of training facilities for US European Command in light of the Pentagon's Global Posture Review (see p. 17). At the same time Algeria is to host an African Union regional counter-terrorism centre. This is intended to coordinate information on Africa-wide terrorist activities, and is due to be established by October 2004.

Between 18 August 2003 and 26 February 2004 the International Committee of the Red Cross (ICRC) secured the release of over a thousand **Moroccan** prisoners held by the Polisario Front. Meanwhile efforts continue to manage the Western Sahara conflict through UN-sponsored confidence building measures. To this end, the UN Security Council adopted Resolution 1541 in April 2004 calling upon Morocco and the Polisario Front to accept a UN-backed peace plan for Western Sahara. The plan would give the territory immediate self-government, to be followed within five years by a referendum on its independence from Morocco. However, whilst the Polisario Front agreed to the plan, Rabat rejected it.

## Total Armed Forces

On the 23 May 2003 Iraq's armed forces were formally disbanded by the Coalition Provisional Authority (CPA). Large quantities of military equipment have been destroyed. New Iraqi security organisations have been formed with training provided by the US, UK, Australia, Jordan and Germany. NATO has also undertaken to provide training. Details of Iraqi forces as at 28 June 2004 are outlined below.

Iraqi Police Service Required 89,369. Current strength 86,944 of which 83,789 are active (56,913 untrained, 26,876 trained), and 3,155 in training.

## 126 Middle East and North Africa Part I

**Department of Border Enforcement** Required 20,420. Current strength 18,208 of which 18,183 are active and 25 officers in training

**Iraqi Armed Forces** Required 35,000. Current strength of 9,754 of which 7,116 are active and 2,638 are in training.

Navy €410 (total numbers unconfirmed)

### **Iraqi Coastal Defence Force (ICDF)**

Base: Umm Qasr

5 27m patrol craft (Chinese-built)

5 RIBs

ICDF crews being trained by UK RN

**Iraqi Riverine Patrol Service (IRPS)** unknown numbers of personnel being trained by UK RN, using Boston Whalers, RIBs and Combat Support Boats.

**Iraqi Air Wg 500**

RECCE 2 SB7L-360 Seeker

AT 2 C-130B

UTL Hel 16 UH-1H

**Iraqi National Guard (Iraqi Civil Defence Corps)** Required 41,088. Current strength 37,790 of which 36,229 are on duty and 1,561 officers are in training.

**Facilities Protection Service** Required 73,992. Current strength 74,069 of which 73,992 are active and 77 officers are in training.

Total security force requirement is 259,869 of which 226,765 are on duty and in training.

## Foreign Forces

The US currently provides an estimated 121,600 troops. A further 23,000 troops are provided by 31 other countries.

### Israel II

## Central and South Asia

### REGIONAL TRENDS

Conflict continues to bedevil the region, with counter-insurgent and anti-terrorist operations remaining the focus for many governments. The peace process in Sri Lanka remains fragile; sporadic violence and deep-seated disagreement amongst factional leaders and politicians makes a quick resolution unlikely. Meanwhile, the Maoist guerrilla campaign in Nepal has spread across the country with government forces under increasing pressure as casualty numbers rise and disruption to everyday social and business life heightens.

However, India and Pakistan have entered a period of rapprochement and talks on Kashmir are proceeding despite a change of government in New Delhi and continuing violence in Jammu and Kashmir. At the same time, both countries are continuing to develop their strategic forces.

Afghanistan continues to be pivotal to events in Central Asia. Pakistan has adopted an increasing role in combating Taliban and al-Qaeda elements operating internally and from across the Afghan frontier, while US and coalition operations are now moving into their third year. Military operations against this threat are continuing in southern and south-eastern Afghan provinces, as well as in the tribal areas of Pakistan. NATO is now in command of the International Security Assistance Force (ISAF) and has the challenge of bringing enough security to the country to facilitate the peaceful conduct of presidential elections, scheduled for October 2004, and assembly elections in Spring 2005.

The countries of Central Asia are awaiting the outcome of these events, harbouring concerns that Islamist extremism may return. **Uzbekistan** in particular – having suffered a wave of terrorist attacks in March – fears a resurgence of the Islamic Movement of Uzbekistan (IMU) also known as the Islamic Movement of Turkestan. Meanwhile, Tashkent may be moving away from a close alliance with Washington, shifting more towards Moscow. This has much to do with the general Central Asian fear that the US is unlikely to stay in the region in the long term.

However, despite these immediate security issues, there is growing awareness that other challenges assume greater importance in the future. Water resources are likely to emerge as a key destabilising factor in Central Asian politics, with consequences beyond the region. Surveys have shown that regional glaciers feeding the main water sources will have disappeared in approximately 20 years, while the Aral Sea continues to shrink. Water-related issues between Kyrgyzstan and Uzbekistan are becoming more contentious as the ageing Uzbek water infrastructure deteriorates, with Soviet-era canal systems failing. Moreover, a project which is being planned by Turkmen president, Sapamurat Niyazov, makes these future difficulties plain: Turkmenistan is planning to build the 'Golden Era Lake' to the east of Ashkhabad, holding some 150 billion cubic meters of water from the Amu Darya River – a water source that provides most of the water to Uzbekistan and northern Afghanistan as well as Turkmenistan.

Nonetheless, for the immediate future, **Afghanistan** remains the focus of Central Asian security concerns, driving the regional agenda and fuelling insecurity. Despite continuous search and destroy operations by US-led forces in southern and south-eastern provinces, the twin objectives of killing or capturing the leaders of al-Qaeda and the Taliban are proving elusive. Chances of success are not helped by local doubt over the long-term commitment of the US and the fear that once the immediate objectives of killing or capturing Taliban and al-Qaeda leaders are achieved, the US military will depart, leaving Afghanistan to an uncertain fate. In March 2004 the US sent 2,000 to participate in *Operation Mountain Storm*, which focused on the south-east of the country; they joined the almost 12,000 US troops already in Afghanistan who had been involved in previous operations such as *Operation Avalanche* in December 2003. At the same time, some 5,000–7,500 Pakistani personnel conducted operations on the other side of the border in Southern Waziristan, particularly around the town of Wana. Despite several arrests by Pakistani

forces and a number of casualties on both sides, the operation did not break down Taliban and al-Qaeda operating structures to the degree intended. Subsequent similar operations were also inconclusive. Nevertheless, the pressure being exerted on anti-reconstruction elements in Afghanistan has restricted insurgent attacks largely to the southern provinces. But this has been at considerable cost to Islamabad, and has contributed to President Pervez Musharraf's somewhat precarious position. Actions in the North-west Frontier Province's tribal areas have alienated its inhabitants, who have witnessed the first encroachments on their fiercely guarded autonomy since Pakistan's independence in 1948.

The command of the International Security Assistance Force (ISAF) passed to NATO in August 2003, with Eurocorps providing the command element, under French Lieutenant General Jean-Louis Py, from August 2004. With NATO member states proving reluctant to give ISAF the necessary personnel and support to allow a proper expansion of its activities outside Kabul, operations have been limited to the provision of nine Provincial Reconstruction Teams (PRTs) in the northern Tajik, Uzbek and Hazara areas. Limiting operations to these locations has given the impression that international aid is being focused on the former 'Northern Alliance' areas, at the expense of the ethnic majority Pashtun regions in the south. Compounding this, insecurity in these ethnic majority Pashtun areas has meant that reconstruction there will be difficult to achieve for some time. This insecurity has also meant that voter registration drives, necessary to ensure that these areas participate fully in the upcoming elections, have been problematical. The second ballot – for an elected assembly – has been postponed until Spring 2005 to allow more time for the restoration of security and improvement of voter registration levels. Meanwhile, President Hamid Karzai is expected to win the scheduled October 2004 presidential elections.

The illicit trade in drugs from Afghanistan is possibly the largest security problem confronting the Afghan government and the international community. Efforts to reduce the volumes of opium and, increasingly, heroin, leaving the country have been largely ineffective. The UN Office on Drugs and Crime's 2003 Opium Survey concluded that, in that year, Afghanistan produced three-quarters of the world's opium, generating \$2.3bn in revenue – just under half the country's legitimate GDP. Poppy cultivation had increased 8%, from 74,000 hectares in 2002 to 80,000 in 2003, and has spread to 28 of the 32 provinces; opium production increased by 6%. James Moseley, US Deputy Secretary of Agriculture, said he expected the 2004 Afghan poppy harvest to be 50% larger than that in 2003. Furthermore, there are indications of new routes being opened and formerly minor trade routes expanding, both to the south through Pakistan and India, and westwards through Iran and Iraq.

The ongoing insurgency, and Afghanistan's unresolved future, creates an atmosphere of uncertainty in other Central Asian countries. A resurgence of extremist violence in **Uzbekistan** in March and April 2004 saw a bomb explosion at a residential facility in the Romitan District of Bukhara as well as, for the first time, suicide bomb attacks. Two of these occurred at the Chorsu market in Tashkent – one on 29 March, and one on 1 April. On 30 March 2004, 20 suicide bombers blew themselves up in a Tashkent house which had been surrounded by security forces. In all, 47 died in this violence, which suggested a return to activity by the Islamic Movement of Uzbekistan (IMU), re-named the Islamic Movement of Turkestan (IMT). It also raised the possibility that splinter groups may have broken away from Hizb-ut-Tahrir (see page 371) to join al-Qaeda in armed hostilities. The government response to the attacks was immediate and ruthless, and it resulted in increased criticism of president Karimov's regime by the West for the sweeping arrests which followed. Moscow, on the other hand, quickly offered assistance to Tashkent's anti-terror campaign – a move which increased the perception that Karimov is favouring Russia over the US. In a further move, the Shanghai Cooperation Organisation (SCO) has opened a Regional Anti-Terrorist Centre (RATC) in Tashkent, which gives Uzbekistan a more emphatic role in this Russian and Chinese-centred organisation. In July 2004, Uzbekistan's troubled human-rights record prompted the US State Department to refuse the certification of foreign aid totalling up to \$18 million. Nevertheless, the US continues to maintain its base at Khanabad, and has given Tashkent aid for internal and border security purposes. Thus, despite

uncertain international relationships, Uzbek–Western cooperation remains strong on security issues. The establishment of a NATO Partnership for Peace (PfP) centre was discussed on 29 February 2004, and Tashkent signed a Partnership Cooperation Agreement with the EU on 5 May 2004.

In **Kyrgyzstan** there is also emerging competition between Western and Russian influence. The coalition airbase at Manas, originally designated as a base for the support of operations in Afghanistan (a role it maintains), now hosts some 1,000 US troops; the Kyrgyz government has agreed that it be used for another three years. Manas is being considered as a US Forward Operating Location or Cooperative Security Location under the Pentagon's Global Posture Review (see page 14). At the Kant airbase, some 12 kilometres from Manas, Russia now maintains around 500 service personnel along with 20 aircraft – part of the Collective Security Treaty Organisation's (CSTO) Collective Rapid Deployment Force (CRDF). In a two-phase exercise, which took place in Kazakhstan and Kyrgyzstan from 2–6 August, CSTO forces exercised in a counterterrorist scenario set in the Ferghana region. Two thousand troops from Russia, Kazakhstan, Kyrgyzstan, and Tajikistan took part in the exercise, supported by 25 combat aircraft and helicopters. **Tajikistan** is also witnessing a competition for influence between Russia and the US. While a gradual transfer of responsibility to Tajik border guards has been taking place this year, the Russian army's 11,500-strong 201 Motor Rifle Division (MRD) will – as of autumn 2004 – remain to man a permanent base, and Russian border guards will remain to advise Tajik border personnel. At the same time, the US and coalition base at Kulyab may come under consideration as part of the US basing plan, like Manas. The presence of both of these bases on China's western border, and within the CSTO's southern region, may in the future give cause for competition between the US, China and Russia.

In **Kazakhstan**, close cooperation with external powers over energy issues is essential to its security. Astana maintains close and active defence arrangements with Russia through the CSTO, China through the SCO, and NATO through PfP and bilateral programmes. The Caspian Sea plays a key role in the Kazakh defence reform programme with a number of initiatives ongoing or under discussion: the Kazakh armed forces are seeking to develop a rapid response force interoperable with foreign forces, including NATO's, for the protection of oil installations in the Caspian Sea.

---

## SOUTH ASIA

---

### India and Pakistan

An improvement in relations between India and Pakistan was assisted by the resumption of an official dialogue in June 2004. This followed 18 February's exploratory 'talks on talks' where the two sides agreed to restart a bilateral 'composite dialogue', coming on the heels of the 6 January summit of the South-east Asian Association for Regional Cooperation in Islamabad. Transportation links have reopened and 'flag' meetings between local army units along the Line of Control (LoC) in the disputed territory of Kashmir have once again taken place. Meetings on nuclear confidence-building measures (CBMs) began on 19 June, following a general election victory by the Congress-led United Progressive Alliance (UPA) coalition and the appointment of Manmohan Singh as prime minister.

In **Kashmir**, the ceasefire along the LoC and Siachen Glacier has held since 25 November, ending years of cross-border artillery and small arms exchanges in these areas. In addition, cross-border infiltration into Indian-administered Kashmir has declined during 2004, and is expected to be further reduced upon the completion of a 600km multi-layered fence on the Indian side of the LoC. On 28 June, India and Pakistan held the first round of talks on Kashmir as part of the 'composite dialogue'. However, July saw continuing violence in Indian-administered Kashmir, indicating that the peace process remains fragile – particularly given the presence of some 1,500–2,000 militants in this area. But 9 August 2004, Pakistani authorities arrested Maulana Fazl-Ur Rahman Khalil, leader of Harakat al-Mujahedin, a group which has carried out attacks against Indian forces in Kashmir.

## MILITARY DEVELOPMENTS

### Missiles

In July 2004, India carried out the third annual flight-test of the *Agni* I medium-range (700km) ballistic missile (see Table 4), and plans to run its first test of the longer range *Agni* III ballistic missile (estimated at 3,000km) in 2004–05. Short-range *Prithvi* I and II missiles were tested in March and July 2004 from mobile launchers. In addition, the Indian government decided to raise two *Agni* missile groups in 2005 as well as two new *Prithvi* short-range missile groups. These units will be introduced into service in the army instead of the air force although all strategic forces will be managed by the recently established Strategic Forces Command.

The joint Indo–Russian cruise missile development programme passed through two critical phases. Following the seventh test of the naval version of the 290km *BrahMos* cruise missile on 13 June 2004 (four tests took place from October 2003–June 2004) (see Table 4), the government announced that development tests for the naval version of the missile were now complete. A report followed, noting that joint production of the missile is to commence in late 2004, with some of the navy's frigates and destroyers carrying them from 2005. The *BrahMos* supersonic cruise missile, which has a nascent nuclear capability, is a combination of Russian design and propulsion technology, with Indian software and guidance systems.

Pakistan tested its longest-range ballistic missile – *Shaheen* II (*Hatf* VI), a solid-fuelled, two-stage, nuclear-capable missile – for the first time on March 9, 2004. The *Shaheen* II has an estimated range of up to 2,500km. Pakistan also carried out three successive tests of its short-range *Hatf* III (*Ghaznavi*) and medium-range *Shaheen* I (*Hatf* IV) missiles in October 2003, and conducted two flight tests of the medium-range (1,300km) *Ghauri* I in May–June 2004 (see Table 4). Apart from proving technical requirements, these tests demonstrated a political determination to continue Pakistan's nuclear weapon programme despite the international furore surrounding A.Q. Khan's clandestine proliferation activities.

Since the Lahore Agreement of 21 February 1999, both New Delhi and Islamabad have normally given each other – and P-5 member states – advanced notification of ballistic missile flight tests. However, there have been several instances of confusion and misunderstanding, along with allegations of non-notifications and short flight times. Because of these concerns, both sides agreed to conclude an agreement containing technical parameters regarding the pre-notification of missile flight testing, at the talks on nuclear CBMs on 19–20 June 2004.

### Missile defence

India's interest in ballistic missile defence (BMD) is largely driven by political concerns, and Indian BMD developments are not a high priority for the Indian Defence Research & Development Organisation, which has several competing budgetary programmes. The only related acquisition of significance have been two *Elta Green Pine* early warning and fire control radars, reportedly purchased from Israel in 2002. The 3 *Phalcon* AWACS (Airborne Warning and Control Systems) systems ordered in March 2004 for \$1.1bn – and intended for mounting on ex-Russian Il-76 aircraft – have a limited role in the detection of missile launches. But New Delhi is willing to wait, in case practical technological anti-missile solutions emerge. Moreover, the priority assigned to missile defence may change depending upon Beijing's response to the emerging US BMD programme.

### Maritime

In January 2004, India finalised a \$1.5 billion deal with Russia for the *Admiral Gorshkov*, a 17-year-old 44,570-tonne *Kiev*-class aircraft carrier, as well as 16–20 MiG-29K combat aircraft and 4–5 Kamov Ka-28/31 ASW helicopters (see page 310–311). Although the refurbished carrier is expected to arrive in Mumbai only in 2008–09, it will significantly boost the navy's integral air power and enable it to operate a two-carrier

Table 4 Selected Missile Flight Tests, South Asia, 2003–04

Date	Missile	Nature	Range km	Payload kg	Test site • Status
<b>India: ballistic missiles</b>					
23 Jan 2004	<i>Prithvi I</i>	SSM	150	1,000	Integrated Test Range (ITR), Chandipur-on-sea (15km from Balasore), Orissa, eastern India • Inducted in 222 and 333 Msl gps (MG) (approved new 444 and 555 MGs) controlled by the Army
19 Mar 2004	<i>Prithvi II</i>	SSM	250	500	ITR • Development/Test
3 Jul 2004	<i>Agni I</i>	SSM	700	1,000	Wheeler Island, 10km off the eastern coast (70km south of Chandipur-on-sea), Orissa, eastern India • Inducted in 334 MG – controlled by the Army
<b>India: cruise missiles</b>					
29 Oct 2003	<i>BrahMos</i>	Cruise	290	300	ITR, Chandipur-on-sea • Serial production – to be deployed in navy on surface warships in 2005
9 Nov 2003	<i>BrahMos</i>	Cruise	290	300	Mobile launcher at ITR • As above

13 Jun 2004	<i>BrahMos</i>	Cruise	290	300	Mobile launcher at ITR • As above
<b>Pakistan: ballistic missiles</b>					
3 Oct 2003	<i>Hatf III</i> ( <i>Ghaznavi/M-11</i> )	SSM	280	500	Flight Test Range, Sonmiani Beach (50 kms west of Karachi, Sindh) • Inducted into the army's Strategic Force Command
8 Oct 2003	<i>Shaheen I (Hatf IV)</i>	SSM	750	500	Flight Test Range, Sonmiani Beach • Inducted into the army's Strategic Force Command March 2003
14 Oct 2003	<i>Shaheen I (Hatf IV)</i>	SSM	750	500	Flight Test Range, Sonmiani Beach • As above
9 Mar 2004	<i>Shaheen II (Hatf VI)</i>	SSM	2,000– 2,500	1,000	Flight Test Range, Sonmiani Beach (first missile test towards Arabian Sea) • Development/test
29 May 2004	<i>Ghauri I</i> ( <i>Hatf V/No-Dong</i> )	SSM	1,300	1,000	Mashhood Test Firing Range, Tilla Jogian, Jhelum (25km west of Jhelum city, Punjab) • Inducted into the army's Strategic Force Command in January 2003
4 Jun 2004	<i>Ghauri I</i> ( <i>Hatf V/No-Dong</i> )	SSM	1,300	1,000	Mashhood Test Firing Range, Tilla Jogian, Jhelum • As above

**India is developing**

- *Agni III*: a surface-to-surface ballistic missile with a range of 3,000km and unknown payload.
- *Sagarika*: a submarine-launched-ballistic missile with a range of 300–350km and unknown payload.

**Pakistan is developing**

*Ghauri III* : a surface-to-surface ballistic missile with an estimated range of 3,000km and unknown payload.

centred naval force in the future. In April 2004, the Indian navy released a declassified version of its new maritime doctrine. Urging the development of a 'non-provocative' submarine-based nuclear deterrent – for a 'truly independent' foreign policy' – it reflected a new-found urgency to acquire a naval nuclear capability, through the ongoing development of the Indian nuclear submarine programme, euphemistically called the Advanced Technology Vessel (ATV) Project. An alternative that has been reported could be the 10-year lease of two nuclear-powered *Akula*-class nuclear-powered submarines from Russia. The new doctrine also reflected the navy's growing reach and sustainability: New Delhi increasingly perceives the area stretching from the Persian Gulf to the Malacca Strait as its 'strategic neighbourhood'. The new naval chief, Admiral Arun Prakash, also stressed the development of a 'network centric' navy, by interlinking long-range naval missiles, radars and sensors through a dedicated communication satellite.

## **Aerospace**

India's largest-ever arms deal with Israel was concluded in February 2004 with the aforementioned \$1.1bn purchase of three sophisticated *Phalcon* Airborne Warning and Control System (AWACS) units to be mounted on modified ex-Russian IL-76 aircraft. *Phalcon* will allow India to detect aircraft deep in Pakistani and Chinese territory. The following month, India signed the much-delayed \$1.45bn deal for 66 BAE *Hawk* advanced jet aircraft with the UK.

## **Land forces**

The first five indigenously manufactured *Arjun* main battle tanks were introduced into the 43rd Armoured Division in early August 2004. Serial production of the tanks, which are equipped with 120mm main weapon, day and night stabilised sights, and special *kanchan* armour, is to begin shortly.

---

## **DEFENCE COOPERATION**

---

India is developing its defence cooperation programmes on the basis of bilateral deals with key regional actors. Attempts over many years to establish an India-US 'strategic relationship', are proceeding: in support of the 'war on terror', India has made naval yards available to US ships in the Arabian Sea, and has provided escorts for US ships passing through the Malacca Strait. This cooperation provided the basis for a growing military-to-military relationship, with Indo-US army, navy, air and special forces exercises taking place. In February 2004, for example, *Cope India*, the first air combat exercise involving the two countries' air forces took place, with Indian *Mirage*, MiG, and Sukhoi fighter aircraft and US F-15s participating. Additionally, the countries signed, in January 2004, an agreement on civilian nuclear and space programmes, high technology trade and missile defence.

The first **Sino-Indian** joint naval exercise took place off Shanghai in November 2003, and was preceded by a Chinese naval exercise with Pakistan. In March 2004, the Chinese defence minister, Cao Gangchuan, visited Pakistan and India – the first such visit in nearly a decade.

Ariel Sharon visited India in September 2003. This first visit by an Israeli prime minister took place against a backdrop of growing military and intelligence ties between the two countries, especially in the realm of sophisticated technology and hardware.

Armaments of Soviet and Russian origin comprise nearly 70% of India's total inventory. Given this fact, the strong Indo-Russian defence relationship will continue, especially when it comes to the supply of spare parts and modernisation or upgrades of weaponry. Nonetheless, ties are expected to gradually change focus – from a relationship based on arms purchasing and supply or licensed-production, to one of joint research, development and armament production. The joint development and production of the *BrahMos* supersonic cruise missile is a case in point, and joint defence projects are of increasing complexity and technological sophistication, concerning other projects like a fifth generation joint strike fighter.

**Pakistan** has also begun to develop new military relationships, apart from its traditional ties with China. The growing relationship with **Russia**, which is manifest in the transfer of arms – exemplified by the acquisition of 13 Mi-8/17 helicopters in 2004 – is an indication of a growing Russian–Pakistani defence relationship. This may provide Russia additional influence with Islamabad.

On a visit to the region in March 2004, US Secretary of State Colin Powell granted **Pakistan** ‘major non-NATO ally’ status, stemming from Islamabad’s support for the ‘war on terror.’ Although this gesture appeared largely symbolic, it gave Musharraf some political support and increased Islamabad’s prospects of acquiring US military equipment, ammunition and defence research-and-development cooperation. Such cooperation was previously denied to Pakistan.

The US had criticised Pakistan for failing to seal its border with Afghanistan and for preventing the ‘tribal areas’ of western Pakistan from being used as a haven for al-Qaeda and Taliban followers. Nevertheless, despite considerable risk to Pakistan’s internal stability, and to his own position, Musharraf deployed troops, into the ‘tribal areas’ for the first time since Pakistan’s independence. This strategy risked alienating the local population, but resulted in the arrest of several key al-Qaeda leaders in July 2004.

---

## INTERNAL CONFLICTS

---

### Pakistan

Although Musharraf has taken a hard line towards terrorism – a stance bolstered by the two assassination attempts in December 2004 – sectarian violence between Sunni and Shia militants flared in Karachi in June and July 2004. At the same time, government-led anti-terrorist operations continued in South Waziristan in the North-west Frontier Province, near the Afghan border. Local militants sympathetic to al-Qaeda have carried out attacks against the Pakistani army – including the attack on Pakistan’s 5 Corps Commander in Karachi on 10 June 2004 – which suggests that these attacks might be linked to the army’s ongoing operations against Islamist militants in Western Pakistan.

### India

**India’s** northeast continues to be rife with local insurgencies, tribal and ethnic clashes, irredentist claims and problems associated with illegal immigration – all fuelled by narcotics trafficking, the proliferation of small arms and light weapons, and kidnappings and extortion. In addition to military action, New Delhi continues to negotiate or extend ceasefire agreements with varied insurgent groups. However, the Royal Bhutan Army’s *Operation All Clear*, launched in December 2003, led to the closure of some 30 insurgent camps of the United Liberation Front of Asom (ULFA), Kamtapur Liberation Organisation (KLO), and the National Democratic Front of Bodoland (NDFB); some 600 militants were killed. The success of this operation led India to request other neighbouring states to follow Bhutan’s lead, and take action against the ‘safe havens’ of Indian insurgent groups inside their countries. However, apart from a limited operation by Myanmar’s army in January 2004 little was done, although after *Operation All Clear*, China publicly refused to provide shelter to Indian insurgent groups on its territory. In April 2004, the Indian army began a major operation along the Indo–Myanmar border in Manipur to secure access to a zone ‘liberated’ by the People’s Liberation Army, the People’s Revolutionary Party of Kangleipak, and the United National Liberation Front. India has alleged that Pakistan’s Inter Services Intelligence (ISI) supports the north-eastern insurgents through the provision of funds and logistics support. Although concrete evidence remains limited, it is reported that in the early 1990s ULFA members were flown from Bangladesh to Karachi, and then to terrorist training camps in Afghanistan. (See ‘India’s troubled northeast,’ IISS *Strategic Comments*, Vol 10 Issue 6, July 2004)

In June 2004, the Indian army began a major operation in Tripura, along India’s border with **Bangladesh**. With increasing bilateral tension between Delhi and Dhaka – exacerbated by an estimated 12m illegal Bangladeshi immigrants in India and the Indian construction of a fence along the porous border –

Bangladesh remains reluctant to conduct coordinated or joint paramilitary operations. With its own internal security problems, Dhaka continues to deny that these groups exist on its territory – despite the fact that in April 2004, the largest seizure of arms took place at Chittagong port. This included over a thousand sub-machine guns, 150 rocket launchers, and 2,000 RPG rounds – all believed to be destined for north-eastern insurgent groups.

## **Sri Lanka**

Following Sri Lanka's 2 April 2004 parliamentary election, the third in three-and-a-half years, prospects for peace with the rebel Liberation Tigers of Tamil Eelam (LTTE) appear to have worsened. With the Marxist Sinhalese nationalist Janatha Vimukthi Peramuna, a party that staunchly opposes concessions to the Tamils, now a coalition partner in President Chandrika Kumaratunga's newly-elected minority government, and given the ramifications of a violent split in the ranks of the LTTE itself, the two-and-a-half-year-old ceasefire appears to be strained.

On 23 April, Kumaratunga invited Norway to resume its role in the peace process by facilitating the resumption of talks between the Sri Lankan government and the LTTE. But, three months later, the peace process stalled. While the LTTE urges its 31 October 2003 proposal for an Interim Self-Governing Authority (ISGA) to be taken as the basis of future negotiations towards solving the conflict, Colombo argues that self-government needs to be discussed within the framework of a final peace deal. The ISGA proposal calls for political autonomy and administrative independence for eight Tamil-majority districts in the northeast, followed by the right to self-determination if a solution is not arrived at and implemented within five years. Tensions were heightened by revelations, in late June, that Colombo had assisted the renegade LTTE commander Colonel Karuna. In an indication of a worsening political situation, a suicide bombing – the first since October 2001 – killed four police officers in Colombo on 7 July. In mid-July, clashes between rival factions of the LTTE were also reported in eastern Sri Lanka.

## **Nepal**

In Nepal, KLO and NDFB links with the Communist Party of Nepal-Maoist (CPN-M) seem to be growing. In mid-2001, representatives of the CPN-M, the KLO, NDFB and ULFA met at Birganj on the Indo-Nepali border, while in March 2004, a senior Nepalese Maoist leader was arrested and interrogated near Siliguri in West Bengal. Meanwhile, the peace talks between Kathmandu and the Maoists collapsed after the government rejected demands to establish a constitutional assembly to decide the fate of the King. On 27 August 2003, the Maoists issued a statement indicating withdrawal from the seven-month-old cease-fire with the Nepalese government and heralding a new wave of violence. According to Kathmandu, over 2,100 people have lost their lives since the breakdown of the cease-fire.

Maoist control over areas of Nepal has been steadily increasing. On 7 May 2004, the Nepalese Prime Minister Surya Bahadur Thapa was forced to resign and King Gyanendra appointed Sher Bahadur Deuba as his successor. The new prime minister has been able to build a broad-based coalition government. However, he has ruled out changes in the status of the monarchy and immediate resumption of peace-talks with the Maoists.

## **Bangladesh**

There are signs that the conflict in the Chittagong Hills between local insurgents and the government of Bangladesh may revive, after six years of peace. The main Islamist extremist group in Bangladesh, Harkat-ul-Jihad-ul-Islami, is suspected of being closely linked with al-Qaeda and also of hosting al-Qaeda and Taliban members that have fled Afghanistan. According to the International Maritime Bureau, Chittagong port is the second most dangerous port in the world, with 58 reported incidents of piracy and armed

robbery between January and December 2003. Moreover, on 21 May 2004 a bomb outside a mosque in northern Bangladesh injured some 150 people including the British High Commissioner.

## Afghanistan Afg

Updated data is tinted

### Proposed National Army/ Security Forces

The Afghan Transitional Administration aims to establish control over the country by forming a national army and a national police force encompassing all ethnic and tribal gps. The new Afghan National Army (ANA), HQ in Kabul, currently comprises some 13,000 soldiers in the Central Corps, which consists of 3 brigades (some 21 bns). Planned org and str of the ANA and national police force is outlined below

#### Army some 60–70,000

4 regional comd, similar in org to Central Corps HQ's likely to be in Kandahar, Mazar-e Sharif and Herat

#### Air Force some 8,000

#### Border Guards some 12,000

#### Police some 50,000

### Factions and Leaders

- The gps which formed the Northern Alliance or 'United Islamic Front for the Salvation of Afghanistan' are being disarmed with some of these troops being incorporated into the ANA, some into the police, but the majority reintegrated into civilian life. This process is ongoing and regional leaders still maintain their own personal military forces.
- **Warlord** Fahim Khan (Tajik, Vice President and Defence Minister) **Area** Kabul, North and North East Afg **Strength** c.15-25,000 **Associated warlords** Ustad Mohammad Atta, Daoud Khan, Bismullah Khan (all Tajik)
- **Warlord** Ismail Khan (Tajik, Governor of Herat Province) **Area** Western Afg **Strength** c.4-6,000
- **Warlord** Rashid Dostum (Uzbek, Presidential Advisor to the North) **Area** Northern Afg **Strength** c.4-6,000
- **Warlord** Hazrat Ali (Pashtun, 1 Corps Commander) **Area** South Eastern Afg **Strength** c.2-4,000

- **Warlord** Abdul Karim Khalili (Hazara, Vice President) **Area** Kabul, Central Afghanistan **Strength** c.2-3,000 **Associated warlord** Mohaqqeq (Hazara)
- **Pashtun tribal leaders** Yusuf Pashtun, Mohammad Khan Alikozai, Gul Agha Shirzai **Area** Kandahar, Southern Afg; Atiqullah Lodin, Munir Mangal, Pacha Khan Zadran **Area** Gardez, Southern Afg; Akhundzade **Area** Helmand, Southern Afg; Karim Brahvi **Area** South Western Afg.
- A number of leaders have not fully accepted the legitimacy of the TA
- Abdul Rasul Sayyaf (Pashtun) **Area** Kabul and immediately to its west **Strength** 1-3,000
- Burhanuddin Rabbani (Tajik) **Area** North Eastern Afg
- Extremist groups that oppose the TA include:
- Hezb-e Islami Gulbuddin (HiG) **led by** Gulbuddin Hekmatyar (Pashtun) **Area** Kabul and South Eastern Afg, **Strength** low hundreds
- Taliban **led by** Mullah Mohammad Omar (Pashtun) **Area** Southern Afghanistan **Strength** c.2-4,000
- Elements of al-Qaeda remain. Incorporating amongst others ethnic Arabs, Chechens, Uzbeks, Uighurs

## East Asia and Australasia

### REGIONAL TRENDS

North-east Asian regional security dynamics remain centred around China and the US. The interests of these two great powers compete over Taiwan but appear to overlap – at least temporarily – when it comes to dealing with the North Korean crisis. Meanwhile, significant military developments are taking place: China's military potential continues to grow; and the US is in the process of reconfiguring its forces in the Asia-Pacific region. Meanwhile, Japan is reconsidering a self-defence posture closely linked to the US with Tokyo pursuing a Ballistic Missile Defence (BMD) capability.

China's military modernisation and transformation programme remains a priority for Beijing, and is scheduled to run for the next ten to fifteen years. In March 2004, \$2.6 billion was added to the defence budget to boost progress. The speed of coalition ground operations during *Operation Iraqi Freedom*, and their use of effects-based operations, have influenced defence thinking in China, leading to greater concentration on networked C4SIR systems and psychological operations. Space is a central component of this military modernisation. With the launch of the *Shenzhou-V* on 15 October 2003, China became the third country to achieve a manned space mission. China now has a military communications satellite in a geosynchronous orbit, and more satellite launches are scheduled for 2004 (see pp. 253–259).

At the same time, China has continued to strengthen its relatively weak military-industrial complex to reduce its dependency on foreign sources of defence technology. However, limitations on China's capabilities can be seen through its continued reliance on purchases from Russia and former Soviet states (Ukraine and Belarus in particular). These remain of importance to Beijing, after the European Union upheld its embargo on arms exports to China following a debate in April 2004. Thus, despite its stated goal of self-sufficiency, China relies heavily on foreign purchases, spending \$1bn last year alone on 24 advanced Su-27 and Su-30 fighter aircraft from Russia (see pp. 327–328).

China is also enhancing its naval capabilities in a bid to improve power projection. Project 9935, the proposed People's Liberation Army Navy (PLAN) aircraft carrier, is a key element. Started in 1994, the vessel's design is modeled on the Russian *Admiral Gorshkov* aircraft carrier and up to three ships may be built. The operational concept for the carrier programme is based on fleet defence and amphibious and logistic operations, with a secondary offensive strike capability. However, reports that all three carrier groups will be operational by 2010 appear unrealistic. Other fleet enhancements include a new long-range, anti-ship missile, currently under development, to be fitted on the latest variant of the PLAN's Type 052 destroyer.

International military cooperation is another developing strand of Chinese defence policy. A Chinese/Indian naval exercise took place in late 2003, and in March 2004 a search and rescue exercise involving a PLAN destroyer and support vessel took place with two French warships. There have also been more military-to-military events with members of the Shanghai Cooperation Organization (SCO), particularly following the SCO's *Coalition 2003* anti-terrorism exercise, which took place in August 2003 in eastern Kazakhstan and in the Uighur Autonomous Region of Xinjiang province. Beijing places increasing emphasis on relations with Central Asian states, particularly given the US military presence in the region.

China's military posture across the Taiwan Strait has hardened following the re-election of Chen Shui-bian as Taiwan's president. The number of short-range ballistic missiles deployed within range of Taiwan is now estimated at more than 500, and is growing by about 75 per year. Missile accuracy and lethality have increased, and solid-fuelled variants are replacing liquid-fuelled missiles. Ground forces on the mainland opposite Taiwan consist of three army groups in Nanjing Military Region, including special operations units. However, the lack of credible amphibious lift capability will continue to hamper China's ability to threaten an invasion of Taiwan in the short to medium term.

Nevertheless, in June and July 2004, the Chinese military held exercises (led by Lieutenant General Huang Jiang) on Dongshan Island in south-eastern Fujian Province with the scenario of controlling the Taiwan Strait and carrying out an amphibious landing. Eighteen-thousand troops deployed from Nanjing Military Region and Su-27 combat aircraft fitted with KN59M air-to-surface missiles provided air cover for the landings, with additional air defence, fire support and protection against attack from the sea given by submarines and surface ships. Although these were smaller than similar exercises in 2001, they were significant not only for the message conveyed but for the emphasis on joint operations. For some background information on Chinese force modernisation developments, see *The Military Balance 2002•2003*, pp. 138–139 and *The Military Balance 2003•2004*, pp. 145–147.)

In July, **Taiwan** held an exercise called *Han Kuang* (*Han Glory*), designed to evaluate the island's defence capabilities against the threat of attack from China, as well as testing the joint operating procedures of Taipei's armed forces. Further, 14–19 June saw a computer-simulated training exercise take place to test Taiwan's responses to an invasion, while in July the US ran a simulation exercise – called *Dragon's Thunder* – at the National Defense University. This examined possible scenarios and responses to Chinese military action against Taiwan.

Taiwan maintains a qualitative edge over China in air power, with some three times as many 'fourth-generation' fighter aircraft as the People's Liberation Army Air Force (PLAAF). The 15-year procurement bill sent to the Legislative Yuan on 2 June 2004 will add *Patriot* PAC-3 missiles and eight submarines to Taiwan's defence forces. Nevertheless, political opposition to defence spending may delay the arrival of these systems. But the pace of reform remains slow overall, even considering the increased civilian control, depoliticisation of the armed forces and chain of command rationalisation that have resulted from the restructuring and modernisation of Taiwan's armed forces.

**Japan's** defence posture is influenced by its desire to retain a strong relationship with the US, the recognition that it needs to strengthen defences against regional threats, and a requirement to be able to react more effectively to emerging threats. Therefore, Japan's 2004 Defence White Paper calls for the Japanese Self-Defense Force (JSDF) to be more functional, better able to deal with terrorism and WMD and capable of participating in multinational, US-led, or UN Peace Support Operations. The US–Japanese relationship meant that Tokyo was under some pressure to assist the coalition in Iraq. Following the 26 July 2003 Special Measures Law on Humanitarian and Reconstruction Assistance in Iraq, the JSDF deployed 600 troops to Iraq to provide humanitarian support to the local population and logistic support to the coalition. This extension of JSDF operations overseas follows assistance given to *Operation Enduring Freedom* in and around Afghanistan, but carried with it a much higher political and military risk in terms of the effect on public opinion. However, Japanese perceptions of this new role revealed increased public support for a JSDF posture commensurate with the modern international environment, easing debate for politicians who seek broader Japanese involvement in regional and international defence. Moreover, the issue of Article IX of Japan's constitution (which defines JSDF roles and the meaning of 'self-defense') is being addressed by Constitutional Research Commissions which are due to report to the House of Representatives and the House of Councillors later this year or early in 2005. The reports are expected to finesse the meaning of the term 'collective self-defense' and examine the role of the JSDF in international cooperation and UN-led operations.

In order to meet various new security threats, including international terrorism, the JSDF's role is being broadened and capabilities are moving away from traditional systems and structures. For example, in March 2004 the Japanese Ground Self-Defense Force (JGSDF) formed a 300-strong special operations unit for anti-terrorist operations. The JGSDF also has extra funding for NBC defence, addressing criticism which followed the 1995 sarin attacks on the Tokyo underground by the Aum Shinrikyo cult.

Further key enhancements demonstrate Japan's intent to increase its capabilities under the Mid-Term Defense Programme 2001–05, such as JGSDF acquisition of the M-90 MBT, AH-64 attack helicopters, and the

UH-60JA helicopter. The Japanese Air Self-Defense Force (JASDF) will replace C-1 transport aircraft with the C-X in addition to procuring four tanker aircraft. Meanwhile, the Japanese Maritime Self-Defense Force (JMSDF) is acquiring three *Osumi*-class transport ships and plans to construct four DDH destroyers. To promote joint capability, there is an ongoing upgrade of Battle Management Command, Control, and Communications (BMC4) which will integrate and network the three existing single service systems in order to increase efficiency and response speeds. There are also other projects in network-centric areas aimed at creating a 'Common Operating Environment' and a 'Defense Information Infrastructure'.

Internationally, Japan views the DPRK (The Democratic People's Republic of Korea, or North Korea) as its major threat. However, Prime Minister Koizumi has chosen to pursue diplomacy with Pyongyang. He made a second trip to visit President Kim Jong Il in May 2004, and Japan participated in six-party talks (see below). However, North Korea's *Taepo-dong* 1 missile, one of which was launched over Japan in 1998, remains a driver of Ballistic Missile Defence (BMD) under command of the JASDF. The aim of the BMD project is to have a limited capability by 2007 and complete operational capability by 2011. In December 2003, the decision was made to proceed with upper- and lower-tier BMD elements which will have as their main components four *Aegis*-equipped *Kongou*-class destroyers, and the upgrade of sixteen *Patriot* fire units, delivering a PAC-3 interception capability.

The 'six-party' talks on **North Korea's** nuclear weapons programme (see *The Military Balance* 2003•2004, p. 145) have continued with meetings in August 2003, and February and June 2004; a fourth Round is due to be held in September. During the third round, held in Beijing from 23–26 June, the US proposed a conditional security guarantee and resumption of heavy fuel oil shipments from China and South Korea in exchange for North Korean disclosure and disarmament after a three-month preparatory period. However, this proposal failed to elicit concessions from Pyongyang, which concluded the talks by threatening to test a nuclear weapon. Along with continued international ambiguities over the extent of North Korean reprocessing activities, it was reported in early June that North Korea had conducted an engine test for the *Taepo-dong* 2, a missile which is estimated to have a maximum range of 6,000km. Pyongyang has argued for normalisation of relations, but Washington is only willing to extend trade and aid if North Korea disarms, withholding full normalisation because of the regime's human-rights record. In addition, the US is keen to expand the Proliferation Security Initiative to prevent the transfer of WMD-related materials and exert increased pressure on the regime (see page 19).

Meanwhile, North and South Korea have implemented certain bilateral confidence-building measures, including the installation of a naval hotline with a common radio frequency, and the removal of propaganda signs and a cessation of broadcasts on both sides of the De-Militarized Zone (DMZ). However, use of the naval hotline soon ran into problems when, after radio contact with a northern vessel, a South Korean ship filed an incorrect report not mentioning the transmission, fearing that Seoul would withhold permission to use force. The incident led to the resignation of Seoul's defence minister. The north, meanwhile, is reported to have used the hotline for propaganda purposes. Further, the sanctuary granted to over 400 North Korean refugees by Seoul in July caused some tension in this relationship, with Pyongyang subsequently failing to attend the scheduled inter-Korean talks in early August.

**South Korea** is to deploy a further 3,600 troops to Iraq, and to re-deploy some 600 personnel presently in Irbil to Nasiriyah, where they will join the new contingent. Meanwhile, at home, South Korean troops have taken over duties at the DMZ from US forces. The Pentagon has announced plans to relocate many of its forces south of the Han River, effectively ending the so-called 'tripwire' deployment. (See *The Military Balance* 2003•2004, pp. 145–146.) Eight thousand troops will move from Seoul (including the Yongsan garrison) to the Pyongtaek area by December 2008, part of a wider plan to move about 18,000 US personnel south, from their present bases north of the Han river. Moreover, as part of its plan to reduce troop levels on the peninsula to 25,000 by 2005, the US announced in May 2004 that it would re-deploy 3,600 of its current strength of 37,000 troops to Iraq (see p. 16), and that these troops would not be

replaced. However, to offset the effect of a reduction of forces the Pentagon will carry out an \$11bn programme introducing new equipment such as UAVs and *Patriot* missile batteries, while the rotation of a squadron of F-117 *Nighthawk* fighter-bombers from Holloman airbase, New Mexico through Kunsan air base, indicated the latter's ability to handle aircraft of such capability.

---

## SOUTHEAST ASIA AND AUSTRALASIA

---

### Low-intensity operations

Counter-insurgency and other low-intensity operations remained preoccupations for the armed forces of several South-east Asian states during 2003–04. The Tentara Nasional **Indonesia** (TNI, Indonesian Armed Forces) continued the intensive operations that it had begun against GAM, the armed separatist movement in the province of Aceh, in May 2003. In November, Jakarta extended martial law for a further six months, and in late December the TNI's commander-in-chief, General Endriartono Sutarto, announced that a second phase of its offensive would involve 'new personnel and improved weaponry and strategy'. Most obviously, this involved deployment to Aceh of three 'Raider' battalions, infantry units drawn from territorial commands and given intensive counter-insurgency training. By this time, and against a background of allegations of widespread human-rights abuses, the TNI claimed to have reduced GAM's armed strength from 5,000 to 1,800. Though GAM was still undefeated militarily, and during March–May 2004 held more than 200 civilian hostages, in May Jakarta felt its grip on the province was sufficiently secure to change Aceh's status to one of 'civil emergency' (lasting until at least November 2004) after a year of martial law. The government emphasised, though, that this change of status did not necessarily mean that TNI troop numbers in Aceh would be reduced. (For information on the background to current measures across the region, see *The Military Balance* 2002•2003, pp. 140–141 and *The Military Balance* 2003•2004, pp. 147–148.)

Elsewhere in Indonesia, the state of civil emergency in the province of Maluku (where there had been bitter conflict between Christian and Muslim militias between 1999 and 2002) ended in September 2003, but violence broke out again in late April 2004. By early May, several dozen people had been killed and almost 1,000 additional troops and paramilitary police had been sent to the province.

In early 2004, a major eruption of violence in **Thailand's** three Muslim-dominated southernmost provinces, the locus of long-running separatist agitation, revived internal security operations as a priority for the country's armed forces. Four soldiers were killed during a raid on an army base in late January, during which 380 weapons were stolen. On 28 April, hundreds of Muslim youths attacked police stations, village defence posts and district offices throughout the south. Army and police personnel, apparently forewarned, reacted fiercely and killed 108 of the attackers, 32 of them when rocket-propelled grenades and heavy machine-guns were used to attack a mosque where they had sought refuge. In response to the deteriorating security situation, the army deployed at least four additional infantry battalions as well as special forces elements to the south. Two more battalions are scheduled to reinforce the army presence in October 2004.

In the **Philippines**, July 2003 saw the government and the 12,000-strong Moro Islamic Liberation Front (MILF) negotiate a ceasefire. The MILF seeks a separate state in Muslim-dominated areas in the south of the country. In February 2004, the two sides agreed to resume Malaysian-brokered peace talks. Though a negotiated solution to the conflict is not an immediate prospect, March saw a week-long visit to Mindanao by a 10-man Malaysian Army Advance Survey Team, a precursor to the International Monitoring Team intended to supervise the ceasefire once formal talks commence. In early July the MILF agreed to cooperate with the government against a 40-strong contingent of the Jemaah Islamiah (JI) pan-Southeast Asian terrorist organisation, as well as kidnapping gangs, which had found sanctuary in separatist-controlled areas. With this understanding in place, peace talks were due to resume in August 2004. The Armed Forces of the Philippines (AFP) continued operations against the Abu Sayyaf Group (ASG),

which may have been responsible for the explosion and fire that killed 116 people on board *SuperFerry 14* close to Manila in late February. By July 2004, the AFP claimed that its operations had reduced the ASG to less than 60 armed personnel, divided amongst several splinter groups. Meanwhile, the AFP continued to fight the communist New People's Army (NPA), which escalated its activity in early 2004 as peace talks between its political wing and the government resumed in Oslo. The NPA is active in remote areas of Luzon, Mindanao and other provinces.

External assistance remains vital to Manila as it tries to enhance the AFP's capabilities, and exercises with the AFP continued to form an important part of US assistance. Exercise *Balikatan 2004*, the latest in the series of *Balikatan* exercises, involved 2,500 US troops (mainly marines) and 2,300 AFP personnel. The exercise mainly took place in Central Luzon, but there was also a civic action component on Palawan in the south. Separately, Philippine defence officials announced in July that a 20-strong US special forces team would deploy to North Cotabato province on Mindanao for joint exercises close to MILF-controlled areas, with the aim of improving the AFP's capacity to root out JI elements.

## Maritime security

During the first half of 2004, the security of shipping in South-east Asian waters emerged as a key issue for littoral states and extra-regional stakeholders alike. Admiral Thomas B. Fargo, commander of US Pacific Command, raised the issue's profile with his testimony to the US House of Representatives in March 2004 and a speech in Vancouver in May, in which he proposed a Regional Maritime Security Initiative (RMSI). According to Fargo, an 'architecture' was needed that would 'allow us to share information and to share intelligence' and to establish 'operating procedures' to facilitate effective action against illicit maritime activities. He also suggested that the US might need to deploy special operations forces in the Malacca Strait to combat maritime crime. Singapore's government drew particular attention to the danger of operational links developing between pirates and terrorists, with potentially calamitous results for the security of merchant shipping in the Malacca and Singapore Straits and for ports in the region, and indicated support for RMSI. Indonesia and Malaysia objected to the proposal, however, seeing it as a challenge to their sovereignty over territorial waters.

Nevertheless, by mid-2004, there had been considerable convergence between the positions of the various parties. At the IISS Shangri-La Dialogue in early June, US Defense Secretary Rumsfeld and Pacific Fleet Commander Admiral Walter F. Doran stressed that RMSI was still embryonic, and that its focus was on intelligence-sharing rather than US military deployments. Malaysia entered into discussions with the US on maritime security, and defence ministers from the countries comprising the Five Power Defence Arrangements (Australia, New Zealand, the United Kingdom, Malaysia and Singapore) announced plans for maritime counter-terrorism exercises, which Indonesia would attend as an observer. In late June, Indonesia, Malaysia and Singapore agreed to stage trilateral coordinated naval patrols in the Malacca Strait. The first such patrol, involving 17 ships, took place during July. Also during July, the Indonesian navy's Western Fleet announced that it was stepping up its unilateral anti-piracy operations in the Strait, while Malaysia's government announced that it would establish a coast guard, to be known as the Malaysian Maritime Enforcement Agency.

## Iraq deployments

Several South-east Asian governments have contributed small military contingents to US-led coalition operations in Iraq. Singapore sent a landing ship and a C-130 transport aircraft for two month stints in late 2003 and early 2004, and in May deployed a KC-135 tanker for three months to support combat aircraft over Afghanistan as well as Iraq. The Philippines' 51-strong army and police contingent in southern Iraq was originally scheduled to remain until late August, but Manila withdrew its personnel by 19 July in a

successful attempt to save the life of a civilian Filipino kidnapped by Iraqi militants. Thailand's 451-strong military contingent was due to be withdrawn by 20 September, after Bangkok rejected an appeal in mid-July by the UN Secretary-General for the troops to stay and help maintain security in the run-up to the Iraqi elections scheduled for January 2005. In early August, both Indonesia and Malaysia emphasised that they would only deploy troops in Iraq as 'peacekeeping' forces under UN auspices.

## Force modernisation

The modernisation of South-east Asian states' military equipment has continued apace. This has been particularly apparent in the region's air arms. In **Indonesia**, two Su-27K and two Su-30MK fighter aircraft, as well as two Mi-35 combat helicopters for the army, ordered in April 2003, had been delivered by September. In April 2004, the air force commander, Marshal Chappy Hakim, confirmed that a further eight Sukhoi fighters would soon be ordered, probably by the year's end. He also restated the air force's long-term plan for a three-squadron Sukhoi force. In May 2004, the defence minister announced an order for 11 Polish-built PZL M28.05 *Skytruck* utility aircraft for the navy. Some of the *Skytrucks* will be equipped for maritime patrol.

**Malaysia** ordered 10 Mi-171Sh armed transport helicopters to begin replacing its air force's S-61s in October 2003, as well as 11 A-109M reconnaissance and utility helicopters to replace the Army Aviation Wing's SA-316 *Alouette III*s. During the same month, the navy took delivery of the first of six *Super Lynx* helicopters. The navy's six AS555SN *Fennec* helicopters were all delivered by March 2004. In prospect are orders for eight F/A-18E/F combat aircraft and four AEW&C aircraft, while longer-term priorities include maritime patrol aircraft for the navy, and avionics upgrades for the air force's MiG-29s and F-5s. The air force plans to lease up to 17 ex-New Zealand MB339CB lead-in trainers, which a local firm seems likely to purchase.

February 2004 saw Singapore Technologies Aerospace announce that it would supply **the Philippines'** air force with 20 refurbished UH-1H helicopters within 12 months. These will boost the air force's tactical airlift capacity while it awaits delivery of another 30 UH-1Hs from the United States. In October 2003, **Singapore's** Defence Science and Technology Agency announced a shortlist of three contenders in its 'Next Fighter Replacement' competition: the F-15T, the Dassault *Rafale* and the Eurofighter *Typhoon*. A final choice is expected in early 2005. Other significant developments in Singapore included the unveiling in November 2003 of a locally produced self-propelled 39-calibre 155mm howitzer, known as the SSPH1 or *Primus* and by then in service with 21<sup>st</sup> Battalion, Singapore Artillery. In February 2004, this unit took its 18 guns to New Zealand for a live-firing exercise. In June 2004, Singapore's navy commissioned the third of its four ex-Swedish navy *Sjoormen*-class submarines. Also in June, **Thailand's** army took delivery of 30 refurbished UH-1H helicopters ordered in 2001. During 2003, **Vietnam's** air force took delivery of 10 refurbished L-39C advanced jet trainers that had previously seen service with the Czech air force. In December 2003, Vietnam agreed to purchase four Su-30MK fighters (probably for delivery during 2004) and took options on another eight of the type. Two PZL M28 *Skytrucks* were ordered for maritime patrol, with another six-eight in prospect.

In November 2003, **Australia's** Defence Minister Robert Hill announced details of the Defence Capability Review 2003, which included outlines of future procurement for the three services. The army will gain new MBTs to replace its present Leopards: in March 2004, the government announced it will purchase 59 ex-US Army M1A1 *Abrams*. In June, the army's UH-1H helicopters relinquished their gunship role, in anticipation of the Eurocopter *Tiger* combat helicopter entering service in December 2004. Measures will be taken to enhance the navy's defensive air warfare capability: SM2 surface-to-air missiles will equip four FFGs, and three new air warfare destroyers – probably equipped with a variant of the *Aegis* system – will be purchased. The navy's amphibious capability will be enhanced substantially. In consequence, plans call for two larger LHD-type ships of at least 25,000 tonnes together with a 'sea lift ship' to replace existing vessels between 2010 and 2017. The capability review confirmed long-term air force plans to acquire Joint Strike

Fighters to replace its existing fast jet combat aircraft, but brought forward the retirement date of the F-111 fleet to 2010, by which time the upgrade of the F/A-18 fleet (effectively to F/A-18C/D standard) will have been completed and key force multipliers in the form of tanker and AEW&C aircraft will be in service. In April 2004, the defence minister announced that the Airbus A330-200 Multi-Role Tanker Transport had been chosen to fulfil the requirement for five tanker aircraft, the first of which will be delivered in 2007. He followed this, in May, by announcing that Australia would exercise options for two more Boeing 737 *Wedgetail* AEW&C aircraft, making a total of six. The Review also revealed that the air force will acquire a small number of *Global Hawk* UAVs. In New Zealand, the navy's fleet renewal programme centres on a multi-purpose vessel providing sealift and limited amphibious capability, as well as fulfilling patrol, rapid response and training roles.

## 172 East Asia and Australasia Part I

### MINELAYERS 1

1 *Wolei*

In addition, *Luda* class DDG, *Hainan*, *Shanghai* PC and T-43 MSO have minelaying capability

### MINE COUNTERMEASURES about 33

24 (ex-FSU T-43) MSO

5 *Wosao* MSC

3 *Wochang* and 1 *Shanghai* II MSI

plus about 50 Lienyun aux MSC, 4 drone MSI and 42 reserve drone MSI

### AMPHIBIOUS 50

7 *Yukan* LST, capacity about 200 tps, 10 tk

3 *Shan* (US LST-1) LST, capacity about 165 tps, 16 tk

9 *Yuting* LST, capacity about 250 tps, 10 tk, 2 hel

1 *Yudeng* LSM, capacity about 500 tps, 9 tk

17 *Yuliang* LSM, capacity about 100 tps, 3 tk

12 *Yuhai* LSM, capacity 250 tps, 2tk

1 *Yudao* LSM

craft: 45 LCU, 10 LCAC plus over 230 LCU in reserve

### SUPPORT AND MISCELLANEOUS €163

1 *Nanchang* AO, 2 *Fuqing* AO, 33 AOT, 14 AF,

10 AS, 1 ASR, 2 AR; 6 *Qiongshe* AH, 30 tpt,

4 icebreakers, 25 AT/F, 1 hel trg, 1 trg;

33 AGOR/AGOS

### NAVAL AVIATION (26,000)

#### EQUIPMENT

€700 shore-based cbt ac, 45 armed hel

#### AIRCRAFT

**BBR** 18 H-6D reported with YJ-6/61 anti-ship

ALCM; €50 H-5 torpedo-carrying lt bbr

**FGA** €30 Q-5, 20 JH-7

**FTR** €200 J-6, 26 J-7, 24 J-8/8A, 12 J-8IIA, 6 J-8B, 6 J-8D

**MR/ASW** 4 PS-5 (SH-5), 4 Y-8X

**RECCE** 7 HZ-5

**TKR** 3 HY-6

**TPT** 6 An-26, 50 Y-5, 4 Y-7, 4 Y-8, 2 YAK-42,

**TRG** 53 PT-6, 16\* JJ-6, 4\* JJ-7

#### HELICOPTERS

**ASW** 15 SA-321, 12 Z-8, 8 Ka-28, 8 AS 565

**TPT** 8 Mi-8

#### MISSILES

**ALCM** YJ-6/C-601, YJ-61/C-611, YJ-81/C-801K

(Naval ftr integrated into national AD system)

### MERCHANT FLEET

1,957 ocean-going ships over 1,000t (incl 298 AOT, 555 dry bulk, 191 container, 913 other)

### MARINES (some 10,000)

2 bde (1 inf, 1 armoured inf, 2 tk, 2 arty bn, 1 AD bn, 2 amph recce bn)

3 Army div also have amph role

#### EQUIPMENT

**LT TK** 150 Type-63A

**APC** 60 Type-63, some Type-92 (WZ-551B)

**ARTY** 122mm: Type-83

**MRL** 107mm: Type-63

**ATGW** HJ-73, HJ-8

SAM HN-5

### DEPLOYMENT AND BASES

#### NORTH SEA FLEET

coastal defence from DPRK border (Yalu River) to south of Lianyungang (approx 35°10'N); equates to Shenyang, Beijing and Jinan MR, and to seaward **SUPPORT BASES** Qingdao (HQ), Lushun; 9 coastal defence districts

**FORCES** under review

#### EAST SEA FLEET

coastal defence from south of Lianyungang to Dongshan (approx 35°10'N to 23°30'N); equates to Nanjing Military Region, and to seaward **BASES** HQ Dongqian Lake (Ninsbo), Zhoushan, Fujian; 7 coastal defence districts

#### SOUTH SEA FLEET

coastal defence from Dongshan (approx 23°30'N) to Vn border; equates to Guangzhou MR, and to seaward (including Paracel and Spratly Islands) **BASE** Yulin, Guangzhou, Zuanjiang

## Air Force 400,000

(incl strategic forces, 210,000 AD personnel and 150,000 conscripts); some 1,900+ cbt ac, some armed hel **Flying hours** H-6: 80; J-7 and J-8: 130; Su-27/Su-30: 180

HQ Beijing. 5 Air Corps, each equivalent to a PLA

Group Army - 1 Corps (Changchun), 7 Corps (Nanning), 8 Corps (Fuzhou), 9 Corps (Urumqi), 10 Corps (Datong). 32 air divs (22 ftr, 3 bbr, 5 attack, 2 tpt). Up to 4 sqn, each with 10–15 ac, 1 maint unit, some tpt and trg ac, make up an air regt; 3 air regt form an air div. Varying numbers of air divs in the Mil Regions – many in the south-east

**BBR** 6 regt with 120 H-6E/F/H (1 regt (some 20 ac) nuclear ready), 1 regt with 20 H-6H (possibly with YJ-63 cruise missile), 1 trg regt with 40 H-5

**FTR** 39 regt with some 1,000 ac: 400 J-7II/IIA (16 regt), 50 J-7III (2 regt), 24 J-7IIM (1 regt), 50 J-7C/D (2 regt), 150 J-7E (6 regt), 20 J-8 (1 regt), 40 J-8IIA (2 regt), 50 J-8IIB (2 regt), 24 J-8IID (1 regt), 50 J-8E (2 regt), 78 Su-27/J-11 (38-SK, 40-UBK) (4 regt)

**FGA** 24 regt with some 700 ac: 300 J-6 (10 regt), 50 J-6A (2 regt), 300 Q-5C/D (9 regt), 76 Su-30 MKK (3 regt)

**RECCE/ELINT** €290: €40 HZ-5, 100 JZ-6, some JZ-7, some 20 JZ-8, 4 Tu-154M

**AEW** Some A-50

**TPT** €513: incl some 15 Tu-154M, 2 Il-18, 20 Il-76MD, 300 Y-5, 93 Y-7/An-24/An-26, 49 Y-8/An-12, 15 Y-11, 8 Y-12, 8 Boeing 737-200 (VIP), 5 CL-601 *Challenger*

**TKR** 1 regt of 10 HY-6

**HEL** €90-100: incl 6 AS-332 (VIP), 4 Bell 214, 40 Mi-8, 20 Z-9

**TRG** €200: incl HJ-5, JJ-6, 50+ JJ-7, 8+ JL-8, PT-6 (CJ-6)

**MISSILES**

AAM PL-2B, PL-5B, PL-8, 1,200 P27 (AA-10), 3,200 P73 (AA-11), 100 P77 (AA-12), PL-12

ASM Kh-29 (AS-14), Kh-31P (AS-17), Kh-59 (AS-18), YJ-63 expected

## Caribbean and Latin America

Following an increase in armed incidents between rebels and pro-Aristide militia in **Haiti** in early 2004, international pressure, in February, facilitated the departure of Aristide in the face of a rebellion led by Guy Philippe, a former member of Haiti's army and police force. On 23 February the US deployed a small team to protect its embassy in Port-au-Prince and, after the departure of Aristide on 29 February, deployed a larger force as the lead element in a UN authorised Multinational Interim Force (under Resolution 1529(2004)). This Chapter VII UN deployment had, in its forward element, around 1,500 US Marines, Canadian special forces and 420 French troops, who deployed between 1–7 March. On 17 March, a government was sworn in by interim president Boniface Alexandre, under interim Prime Minister Gerard Latortue. Meanwhile the Caribbean Community (CARICOM) refused to recognise Latortue's regime, believing it to be too closely linked to the US but with the caveat that the organisation would review its decision later in the light of developments and the greater involvement of the UN. As of 3 August, CARICOM had submitted a recommendation on the organisation's relations with Haiti.

On 1 May the UN Security Resolution 1542 authorised the Stabilization Mission in Haiti (MINUSTAH) with an authorised strength of some 8,000 military and police personnel drawn from regional countries, Spain and Canada. MINUSTAH took over from the Multinational Interim Force on 30 July, at the same time as demands for an increase in its strength were made by the UN in order to cope with the impending rebel disarmament, which Latortue had demanded by 15 September. The forces started their first deployment in the aftermath of severe flooding in the south-east of the country, and had to conduct relief operations as well as carry out their main security task.

On 28–29 January, a two day industrial strike against government economic policies in the **Dominican Republic**, not only brought the country to standstill but also resulted in nine deaths, and about 500 injuries. The strike saw the emergence of armed bands linked both with the president's election campaign and local drug traffickers.

As a reflection of growing tension between Washington and Havana, **Cuba** increased its defence budget for the first time in many years. At the same time, the country's defence posture has switched from a conventional base to a concentration on the deployment of small lightly armed groups operating in 126 defensive regions across the island.

---

## LATIN AMERICA

---

### Counter-terrorism cooperation

Colombia continues its campaign against rebel groups, and particularly against the Fuerzas Armadas Revolucionarias de Colombia (FARC) with increasing success. The arrest of Ricardo Olivio Palmera Pineda (alias Simon Trinidad), who was the group's finance chief, was a success for President Uribe's policy of combating FARC through more cross-border cooperation with neighbouring regimes, as well as through a more aggressive military strategy than that of his predecessor. Significantly, Pineda was arrested in Ecuador in a joint operation with Ecuadorian troops, as well as with US authorities. In a further expansion of counter-terrorism cooperation aimed at restricting FARC cross-border movement, on 19 July Brazil passed a law permitting the shooting down of aircraft illegally transiting its territory. The Amazon Region Surveillance System (SIVAM), a radar and satellite surveillance set-up, is a key component of this operation. However, the move has prompted a legal challenge to the policy from the Brazilian Supreme Court as well as some reticence from Washington.

The US is set to renew its assistance to Colombia by extending '*Plan Colombia*' for another year. Meanwhile, Colombian forces have made significant changes to their force structure and tactics to enable more effective operations. A new brigade, 10th Brigade, which is to be equipped with AMX-30 MBTs and with Special Force groups, has been formed to conduct operations in the east of the country, near the

Venezuelan border. Furthermore, the 'Search Bloc' police organisation has been reformed to track down drug cartels, with emphasis on the south-west of the country. Under President Uribe's *'Plan Patriota'*, 15,000 troops – including special forces – have been engaged throughout most of 2003–04 in a series of operations aimed at neutralising guerrilla strongholds in the south of the country.

In December 2003, 160 members of the right wing Autodefensas de Cauca (AUC) disarmed voluntarily in the aftermath of a 27 November statement by President Uribe saying that the government had achieved its target of encouraging 3,000 defections in 2003. Moreover, in January 2004, monitoring of the demobilisation of AUC fighters was officially taken over by the Organization of American States, led by former Colombian President Cesar Gaviria. This was part of the Agreement for the Verification of the Peace Process in Colombia signed earlier that month.

In **Peru**, Sendero Luminoso (SL) has not carried out any recent major operations, which is possibly the result of a government campaign focused on hitting the Maoist group's command structures. This has resulted in only two SL groups remaining: one in the Ene river basin area; the other in the Huallaga river valley. The government initiative has included the creation of 'counter-subversion bases' and the reactivation of local self-defence committees, in addition to a government military offensive launched in early May in the Alto Huallaga region, which followed the demand by an SL leader for the government to reach a political compromise or face resumption of hostilities.

### Political unrest and border tension

**Venezuelan** forces have interdicted several groups of AUC and FARC rebels crossing the border from Colombia. However, Colombian and Venezuelan authorities have not formally entered into any cooperative arrangements and Venezuela has objected to the deployment of Colombia's 10<sup>th</sup> brigade on the border. Nevertheless, the two presidents met on 15 July to discuss border security issues. Meanwhile, although he won a referendum on his leadership in mid-August, President Chavez continues to face internal political challenges.

Relations between **Chile** and **Peru** worsened when, on 25 January 2004, Chilean marines shot a man, presumed to be Peruvian, as he crossed the border. The shooting came a few days after an order by the Chilean defence minister for all border posts to adopt stricter measures to prevent entry by illegal immigrants. Chile also deployed 17,000 troops on training exercises along the Bolivian border in November.

In October 2003, a three-week wave of sometimes violent anti-government protest led to the death of over 100 protesters in **Bolivia** and culminated in the resignation of President Gonzalo Sánchez de Losada on 17 October. The unrest stemmed from opposition to a plan for the export of natural gas via Chile, and was led by Quechua leader Felipe Quispe and Evo Morales, who is a member of the indigenous Aymara and a representative of the coca growers, with links to FARC. These developments reflect an increase in internal dissent in Bolivia which is largely based on ethnic issues and reflects Bolivia's status as one of the poorest countries in Latin America. The arrest in December of suspected Ejercito Liberacion Nacional – Bolivia (ELN-B) terrorists, as well as coca-growers linked to Morales' Socialist movement, indicates the potential for more political unrest, with links to the illegal drugs trade and terrorism. As a consequence of the unrest the decision to export gas was postponed following the accession of former Vice President Carlos Mesa, but popular protest resurfaced in March 2004. Finally, in a referendum on 18 July, Bolivians voted for the export of gas and on 1 August, an agreement was signed with Peru linking Bolivia to world gas markets through a special economic zone on the Peruvian coast.

### Military developments

Continuing the upgrade of its air force, **Brazil** took delivery of its first F-5BR jet aircraft on 4 December 2003. The new aircraft is a modernised version of Brazil's 46 supersonic F-5E fighters, the Brazilian Air Force's main tactical fighter aircraft. The upgrade programme, which is due for completion in 2010,

## 196 Caribbean and Latin America Part I

includes a plan to purchase 12 fourth-generation supersonic fighters to re-equip the 1st Air Defence Group (GDA), modernisation of the old F-5E/F (E for combat; F for training and attack), and an additional 53 AMX fighter-bombers. Within the area covered by the Amazon Region Surveillance System, the air force is currently receiving its first batch of 76 ALX-*Super Tucano* turboprops – a deal worth approximately \$420m. It is also looking at a complete development package for P-3 *Orion* maritime patrol aircraft and C-130 transport planes, as well as the purchase of 12 Spanish medium-size C-295 cargo aircraft. Allied to this, recent pronouncements of an intention to acquire an SSN capability may be further indications of the country's aspiration to become the main regional military power.

Michelle Bachelet, **Chile's** defence minister, has announced plans to acquire four second-hand frigates from the Royal Netherlands Navy (RNLN) as a more cost-effective and efficient way for Chile to update its ageing fleet. The deal, for two *Jacob van Heemskerck*-class frigates and two *Karel Doorman*-class frigates, is worth \$350 million, and negotiations are expected to be finalised in the spring. The *Abraham van der Hultst* is slated to join the Chilean fleet in June 2005, and the *Jacob van Heemskerck* in December 2005; *Witte de With* and *Tjerk Hiddes* will join in August 2006 and April 2007 respectively. The new ships will replace older vessels, and there will be no increase in overall numbers.

**Venezuela** is funding a defence procurement programme to upgrade some of its military capabilities. European companies are tendering for a contract for 200 armoured vehicles, and Israel is reportedly supplying a quantity of missiles of unknown type. Whilst this move is probably designed to give redress an imbalance in capability vis-à-vis Colombia, the move may also be intended to divert attention away from Venezuela's internal problems.

## Sub-Saharan Africa

### REGIONAL TRENDS

The move towards greater involvement and cooperation in conflict resolution has continued with the adoption by the African Union (AU) of a Common Defence and Security Policy and agreement on the establishment of certain shared military components. However despite these positive signs, HIV/AIDS continues to be a debilitating factor on regional militaries, working against their ability to deliver military capability. Meanwhile, disarmament, demobilisation and retraining (DDR) programmes in the Democratic Republic of the Congo (DRC) are hampered by continuing violence, in contrast to similar programmes in Angola, that are moving ahead slowly despite lack of funds. Liberia has disarmed an estimated half of the country's combatants, though disarmament in Burundi continues to hamper political stability.

### COOPERATION

On 20 January 2004 at the African Union (AU) headquarters in Addis Ababa, African defence ministers adopted a **Common Defence and Security Policy**. This was endorsed by AU leaders in Sirte, Libya, on 28 February. While the summit rejected a Libyan plan to set up a single African army, it did agree to establish the **African Standby Force (ASF)**, a joint military force with peace-building and humanitarian roles, which is intended to be capable of unilateral intervention in the event of 'war crimes, genocide and crimes against humanity, as well as serious threats to legitimate order'. Plans are that the ASF will be in a position to deploy about 15,000 troops by 2005, while the main force elements – five regional brigades – are intended to be available to handle 'less complex' peace support operations and intervention operations by 2010. The European Union has pledged €250 million (\$310m) towards the setup and initial operation of the ASF, which has started to raise its first brigade, the **East African Standby Brigade (EASBRIG)** – which is to be composed of troops from 13 countries, under the auspices of the Inter-Governmental Authority on Development (IGAD). East Africa is also in the process of establishing a regional early-warning system, with a situation room linked to the continental early warning system. Meanwhile, the Southern, Central and North African groupings are still in the early stages of formulating their plans for regional brigades.

### PEACEKEEPING

Five of the six **UN peacekeeping missions** authorised in the past year deployed to Africa, and involved a total of over 45,000 troops. Last August the UN Organization Mission in the **Democratic Republic of Congo** (MONUC) took over peacekeeping duties from the Interim Emergency Management Force, based out of Bunia in the east of the country. The MONUC establishment was 10,596 as of 31 July 2004.

In West Africa, the UN enabled a peacekeeping force for **Liberia**. This authorisation followed on from an ECOWAS decision, after a 31 July meeting in Accra, to deploy a vanguard to Liberia on 4 August, in order to assist in stabilisation efforts and facilitate the handover of power by Charles Taylor. On 1 August, the UN authorised a multinational force for Liberia (under Resolution 1497 (2003)), and declared 'its readiness to establish a follow-on United Nations stabilization force to be deployed no later than 1 October 2003. The UN deployment, was authorised to a maximum strength of 15,000 on 19 September, under Resolution 1509 (2003). On 1 October, authority was transferred from ECOWAS forces to the United Nations Mission in Liberia, with many ECOWAS troops remaining to serve in the UN Mission

The African Union also indicated a wish to deploy a force of over 2,000 to **Sudan** in August 2004, adding to the near 300-strong protection force already authorised to protect AU monitors on the ground in Darfur. The first contingent of this protection force, from Rwanda, flew from Kigali on 14 August.

## 220 Sub-Saharan Africa Part I

Meanwhile, Khartoum has not been wholly positive about international initiatives to send troops to its western territory.

In February the UN Security Council authorised a full one-year peacekeeping operation for **Cote d'Ivoire** and mandated nearly 7,000 UN personnel to monitor the comprehensive ceasefire agreement that the country's warring parties reached in May 2003. The UN operation began on 4 April 2004. Meanwhile, in March 2004, the first contingent of African Union military observers deployed to the **Comoros** Islands under South African command.

It is hoped that the creation of the AU's ASF brigades will relieve some of the strain on UN troops caused by the increase in African peacekeeping deployments, and especially in less complex peacekeeping operations. However, the operational capability of the AU is likely to be limited in the short term, until its forces are more developed in terms of training and equipment. A wider development emerged from the G8 summit at Sea Island in June 2004, where there was much discussion about how best to strengthen African peacekeeping capabilities. It adopted an 'action plan', committing itself to train 75,000 troops by 2010, focusing particularly on African states, and regional and sub-regional organisations. (See 'African peacekeeping: revival or relapse,' IISS *Strategic Comments*, Volume 10 issue 5, June 2004.) In collaboration, the UN and ECOWAS have proposed the establishment of an international peacekeeping school in Nigeria. Meanwhile, the Kofi Annan International Peacekeeping Centre was inaugurated in Accra in January 2004. With international funding and staff, the centre expects to have trained 1,000 personnel by the end of its first year in subjects as diverse as police management in peace support operations, the defence of human rights and the establishment of democratic principles and good governance post-conflict, as well as in longer courses in international peace support operations and internal crisis management.

Although there are positive signs of military cooperation in regional conflict resolution, the problem of **HIV/AIDS** is a negative force mitigating against cooperation. 26.6 million people in sub-Saharan Africa are HIV-positive, according to UNAIDS figures released in July 2004. This is almost two-thirds of those infected worldwide. The disease has killed an estimated 25m people on the continent and infects 3m more every year. Although prevalence and other HIV-related trends vary from country to country (of twelve southern African countries, half have a rate below 2% while in the other half the rate exceeds 20%), at least 13 countries have a prevalence above 8%, and it reaches as high as 40% in Botswana. The disease has lowered life expectancy by decades for many countries, especially southern Africa where the prevalence is at least 15%, and UNAIDS estimates that as many as 40–60% of young Africans will succumb if the current trends do not change. Apart from the human tragedy, the negative effect on military capability is critical to the future ability of countries to deploy and operate their military forces effectively. The prevalence of HIV/AIDS is 23% in the South African Defence Force. Further, the deployment of troops within Africa has in certain cases also facilitated the transmission of HIV/AIDS: many troops now undergo HIV-prevention training, in tandem with more established military subjects. The US Department of Defense has an HIV/AIDS Prevention Program which operates in 29 sub-Saharan African countries, although funding has declined to \$4.2m this year (from \$14m in its first year of operation). Recent studies have shown an increased use of condoms by members of the African militaries; meanwhile, testing is offered on some military bases.

---

## CONFLICT RESOLUTION

---

Some progress was achieved in the **Democratic Republic of the Congo (DRC)** when, on 18 February 2004, the UN began to disarm warring factions in the north-eastern Ituri region. The aim was to integrate members of armed groups into the military, under the control of the transitional government. Furthermore, President Joseph Kabila invited armed groups from the region to a meeting in Kinshasa. This concluded, on 17 May, with rebel leaders signing an agreement to disarm and join in peace-building. Under

the agreement, which followed the formal end to the five-year conflict in April, it was agreed that some 200,000 fighters would be demobilised, bringing the strength of the armed forces to between 80–100,000. However, a late May and early June outbreak of violence for control of Bukavu in the South Kivu region showed the scale of the problem still facing UN DDR efforts, and the continued potential for the Kivus to be a location for manipulation by regional and national actors who have so far limited the success of the political transition that was agreed at Sun City in April. Although government forces re-established control, the violence caused an estimated 30,000 refugees to flee to Burundi in mid-June. The incident also heightened DRC–Rwandan tensions, with Kigali accused by Kinshasa of arming militias. Some 8,000 to 12,000 members of Forces Democratiques de Liberations du Rwanda, a Rwandan Hutu group, operating in South Kivu, and Rwanda's resumption of support to Kivu militias in late 2003 emphasises the cross-border nature of Central African conflicts as well as the weakness of border control. One positive sign was the agreement to establish a committee to monitor the DRC–Rwandan peace agreement in the wake of border clashes. The agreement will have to hold if elections scheduled for 2005 are to proceed peacefully, but the 13–14 August 2004 murder of around 150 Tutsi refugees in Burundi, following an incursion by militants from the DRC, raised tensions once more, with Burundi and Rwanda reportedly threatening to engage the group or groups responsible, in the DRC.

Following the Spring 2002 cease-fire in **Angola**, there has been disagreement over the timetable for elections, with the ruling Movimento Popular de Libertação de Angola (Popular Movement for the Liberation of Angola) (MPLA) party seeking a delay, to which the União Nacional para a Independência Total de Angola (National Union for the Total Independence of Angola) (UNITA) opposition party objects. Conflict resolution measures have continued despite funding shortfalls. The UN has sought to ameliorate this by appealing for \$263m to help reconstruction. Early December 2003 also saw the start of a large-scale UN de-mining programme. Meanwhile, the Angolan Demobilization and Reintegration Programme (ADRP), which aims to integrate 105,000 UNITA and 33,000 government troops, encountered funding difficulties. However, pledges by international donors and the World Bank allowed the second phase to begin on 25 March 2004. The government has also created a security agency to exert central control and monitoring over the country's diamond-mining sector in order to limit the potential for more resource-driven conflict. Finally, continued destabilisation resulting from low-intensity conflict in the Cabinda enclave – between the Angolan armed forces (FAA) and the Front of Liberation of the Cabinda Enclave (FLEC) – prompted the government, in February 2004, to introduce a \$375m socio-economic recovery plan for the enclave.

Violence continued in October 2003 in **Liberia**, with skirmishes between supporters of former president Taylor and the Movement for Democracy in Liberia (MODEL). In February 2004, in the Sinoe region, MODEL looted Liberia's fourth largest rubber plantation. The DDR initiative in Liberia remains problematic as the Liberians United for Reconciliation and Democracy (LURD) refused to cooperate shortly after the launch of the campaign on 1 December. Nonetheless, some 8,600 weapons had been surrendered before the process was officially suspended on 15 December. The DDR programme then restarted in April, and 30,975 combatants – out of an estimated total of 53,000 – had been disarmed by 3 June 2004. By 31 July, the UN peacekeeping presence reached a total of 15,174, with the June addition of a Senegalese battalion. In February 2004, UN troops deployed along Liberia's western border with Sierra Leone and at towns between Monrovia and the Sierra Leone border. Meanwhile, the United Nations Mission in Sierra Leone (UNAMSIL) increased its numbers along the Liberian border in December 2003, to prevent arms smuggling during the disarmament process. (For background information on the conflict in Liberia, see *The Military Balance 2003•2004*, p. 202.)

After a round of peace talks September 2003, Bujumbura and the country's largest rebel faction, the Conseil national pour la defense de la democratie-Forces pour la defense de la democratie (CNDD-FDD), signed the Pretoria Protocol on Political, Defence and Security Power Sharing in **Burundi** on 8 October.

## 222 Sub-Saharan Africa Part I

The peace process was strengthened by the entry of the rebels into the transitional government, and by DDR efforts throughout late 2003 and early 2004. The National Commission for Disarmament, Demobilisation and Reintegration declared in June that demobilisation would begin in mid-July and take four years to complete. However, the government's draft timetable, published on 29 May, is proving too optimistic by scheduling disarmament for completion in November 2004. Meanwhile, clashes are continuing between government forces and rebels of the FNL-Palipehutu, led by Agathon Rwasa. The UN Security Council voted unanimously, on 21 May, to send 5,500 peacekeepers to monitor the ceasefire and carry out DDR, as well as other activities connected with security-sector reform. Under Resolution 1545 (2004), the UN set up the United Nations Operation in Burundi (ONUB) and took over the peacekeeping mission from African Union forces (the African Mission in Burundi) who had been present in an interim capacity since March 2003.

**Sierra Leone** began its slow return to relative normality with local elections on 2 May 2004. The UN Mission in Sierra Leone (UNAMSIL) peacekeeping force began to reduce forces after this time, from a total of almost 11,500 in February to 9,831 as of 31 July 2004. Despite concerns about cross-border activity and the progress of DDR activities, UN-forces began withdrawing from the north and south of the country in June, and are scheduled to depart from the eastern sector in October, leaving the west in December.

In **Nigeria**, local militants continued to attack oil platforms in offshore waters. Meanwhile, tensions between the Ijaw and Itsekiri communities in the Niger Delta re-emerged in January 2004 and, although this raised fears that a truce negotiated in October 2003 would not last, a peace agreement between the two was signed on 1 June 2004. Further north, Plateau state saw sectarian violence between Christians and Muslims in May, prompting the president to declare a state of emergency in Plateau.

---

### CONTINUING CONFLICT

---

The situation between **Ethiopia** and **Eritrea** remains deadlocked, with troop movements reported along both sides of the border. Ethiopia has demanded a revision of the ruling on the border by the Eritrea–Ethiopia Border Commission (EEBC) and is particularly unhappy over its ruling that the border town of Badme should be in Eritrean territory. But Eritrea had continued to refuse UN mediation until Ethiopia accepts the ruling (although Asmara signalled on 21 June that it might meet with the UN envoy charged with resolving the dispute, regardless of Ethiopia's position). Concern arose in March that the movement of peacekeepers with the UN Mission to Ethiopia and Eritrea (UNMEE) was being restricted north of the Temporary Security Zone set up on the disputed border, although Ethiopia appears to have loosened restrictions in recent months. Further, some signs of progress developed in meetings between military officials from both countries (the Sector Military Coordination Commission on 3 March 2004 and the Military Coordination Commission (MCC) on 15 December 2003, as well as 2 February, 15 March, 10 May, and 5 July 2004) aimed at setting up mechanisms for resolving potential border disputes. In a visit to Eritrea in July 2004, Kofi Annan pressed for a resolution of the border dispute. Noting that the UN was facing increasing draws on its resources, he said that international peacekeepers could not remain on the border indefinitely 'without progress ... so I am hopeful that the parties will see it that way and we can settle the situation here and move on.' Meanwhile, although demobilisation of 65,000 Eritrean soldiers began on 1 March 2004, ethnic clashes in western Ethiopia have renewed – especially in the south-western Gabela region. Since December 2003, this region has also seen clashes between rebels of the Oromo Liberation Army and government forces.

In **Sudan**, the conflict in Darfur has escalated, and there have been an estimated 50,000 deaths since fighting began last year. Arab *Janjaweed* militias, supported by the government of Sudan, have attacked villages in a campaign against the ethnic-African Darfur rebels of the Sudan Liberation Movement/Army (SLM/A) and the Justice and Equality Movement (JEM). In May 2004, the African Union began sending

ceasefire monitors, as part of an 8 April ceasefire agreement. It also authorised a near 300-strong protection force. However, it was not until 9 June that the Ceasefire Commission was established at al-Fashir (in Darfur). An early-July meeting in Addis Ababa then saw the AU agree to increase the number of monitors and deploy the protection force. As noted earlier, the first elements of this force left Kigali on 14 August.

Meanwhile, large-scale population displacement and human rights abuses by the *Janjaweed* resulted in some 200,000 refugees crossing into Chad, leading to a number of border clashes between Sudanese and Chadian forces. These continued throughout the summer of 2004 and effectively terminated Chad's position as a mediator in the conflict. In June the rebels appeared to be gaining control over wider territory, which possibly prompted talks in Paris later in the month. The AU announced that it will host peace talks on 23 August between the Sudanese government, the JEM, and the SLA. However, the success or failure of the peace talks is dependent on the disarmament of the *Janjaweed*, with a possibility of sanctions against Khartoum if the government does comply. Meanwhile, the peace process continues in southern Sudan, with an agreement signed on 5 June between Khartoum and the Sudanese People's Liberation Movement/Army (SPLM/A). This deal sets out power sharing arrangements, and opens the way for negotiation on a comprehensive final-status settlement. However, concerns continue that the Sudanese offensive in Darfur and resulting instability could derail the peace process.

Southern Sudan also suffered the effects of cross-border actions resulting from the conflict in northern **Uganda**, where the Lord's Resistance Army (LRA) appeared to make progress in late 2003 and the beginning of 2004. However, by August 2004, the LRA appeared to be substantially reduced in size and weakened, though it remained mobile and active across southern Sudan and large areas of Uganda (where there are an estimated 1.8 million Internally Displaced Persons). Dissatisfaction with the ability of the Uganda People's Defence Forces (UPDF) to protect the countryside was sharpened by an attack on the Barlonyo refugee camp in February 2004. This incident is now under investigation by the International Criminal Court. Uganda carried out *Operation Iron Fist*, which allows the UPDF access to southern Sudan to engage the LRA following a 2002 agreement between Kampala and Khartoum. In July and August 2004, some 360 rebels surrendered, with 120 more being captured, according to press reports. Kampala also extended an amnesty for LRA fighters until November. However, President Museveni is reported to have said that such surrenders have been due to military pressure, not dialogue 'and to the good treatment we have extended to those who surrender.' But Kampala will have to address DDR efforts to ensure that this positive trend continues: while the head of the amnesty commission has reported a total of 14,000 people who have given up the rebellion, Kampala has only managed to resettle 6,000, due to a lack of financial resources.

---

## EMERGING CONFLICT FACTORS

---

The distribution of **water** may also be emerging as an issue that will cause heightened regional tension. Under the auspices of the UN-backed **Nile Basin Initiative**, ministers from ten countries bordering the Nile or its primary source, Lake Victoria, met in emergency session in Uganda, in March 2004. The meeting was announced after Tanzania revealed a £16m project to abstract water from the lake for provision to a million peasant families in the country's western region. The move, in contravention of colonial treaties stipulating the use of the Nile's waters, drew immediate displeasure from Egypt and Sudan, the Arab-African countries whose economies depend on the Nile's flow.

UN (UNAMSIL): 253 obs and 11,286 tps from 31 countries

## Somali Republic SR

Updated data is tinted

### Total Armed Forces

**ACTIVE** Nil

Following the 1991 revolution, national armed forces have yet to be formed. A Transitional National Government (TNG) has however formed with an estimated 5,000 tps but only controls northern Mogadishu. The Somali National Movement has declared northern Somalia the independent 'Republic of Somaliland', and the northeast has seen the self-proclaimed regional administration in Puntland remain autonomous, while various groups compete for local supremacy in the south. Hy mil eqpt is in poor repair or inoperable.

### Main Somali Factions

#### SOMALILAND NATIONAL ARMY (SNA)

(Former SOMALI NATIONAL MOVEMENT) est tp str: 7,000 with a reserve of 60,000 – 4 div of 3 battalions each **clan** Isaaq/Dir/Gadabursi **deployment** Somaliland (Northeast Somalia) **key leader** President Kahin **military commander** Abdirahman Ali

#### PUNTLAND (Former SOMALI SALVATION

DEMOCRATIC FRONT) est tp str: 2,000 plus police **clan** Darod/Majerteen/Omar Mahmoud **deployment** Puntland **key leader** Abdullah Yusuf Ahmed

#### FORMER TRANSITIONAL NATIONAL

GOVERNMENT (TNG) est tp str: the Arta conference made provision for a standing army of 20,000, actual figure may be closer to 5,000 with 3,000 for the police force

## 244 Sub-Saharan Africa Part I

**clan** Cross Clan Organisation **deployment** Northern Mogadishu **key leader** President Abdikassim Salat Hassan (Habr Gedir/Ayr/Absiye) **military commander** Colonel Abdi Ahmed Guled

**AIAI** est tp str: currently AIAI has no standing militia, but security forces linked to AIAI may represent a reserve army of 1,500 militia **clan** Cross Clan Organisation (Fundamentalist Islamic) **deployment** throughout Somalia, primarily in the far south and north of Puntland

**JUBA VALLEY ALLIANCE** est tp str: 1,000+ militia **clan** Darod/Marehan and Hawiye/Habr Gedir **deployment** Juba region in southern tip of Somalia. Control Kismaayo **commander** Colonel Barre Hiraleh

A number of factions opposed to the TNG have formed a loose alliance called the SOMALI RECONCILIATION AND RESTORATION COUNCIL (SRRC). These include:

**RAHANWEIN RESISTANCE ARMY (RRA)** est tp str: 4–5,000 **clan** Rahanwein **deployment** Bay/Bakool Region, control Baidoa **key leader** Colonel Hassan Mohammed Nur Shatigadud<sup>1</sup>

**SOMALI NATIONAL FRONT (SNF)** est tp str: 500–2,000 **clan** Darod/Marehan **deployment** Gedo region **key leader** Abdirisak Isaac Bihi<sup>2</sup>

**SOMALI PATRIOTIC MOVEMENT** est tp str: 1–2,000 troops **clan** Darod/Ogaden **deployment** Lower and Upper Juba **key leader** Aden Abdullahi Nur ‘Gabiyow’

**SOMALI PATRIOTIC MOVEMENT (GESSOWAIN FACTION)** est tp str: 500 **clan** Darod/Majerteen **deployment** Southern Somalia **key leader** General Siad Hersi Morgan

**USC/SOMALI NATIONAL ALLIANCE** est tp str: 75–120 standing militia (could be higher) **clan** Hawiye/Habr Gedir **deployment** parts of Southern Mogadishu/Lower Shabelle valley **key leader** Mohammed Hussein Aaideed

**JOWHAR POLITICAL COMMITTEE** est tp str: 500 **clan** Hawiye/Abgal **deployment** Middle Shabelle **key leader** Mohammed Omar Dhere/Habib (Governor of Middle Shabelle)

### MISCELLANEOUS MOGADISHU FACTIONS

A number of factions in Southern Somalia are neither allied with the TNG nor the SRRC. In particular, some powerful faction leaders in Mogadishu appear to regularly shift allegiances.

**MOHAMED AFREH QANYARE’S FACTION** est tp str: 1,000 **clan** Hawiye/Murosade **deployment** West Mogadishu

**USC/SOMALI NATIONAL ALLIANCE (Ato faction)** est tp str: 50–75 militia **clan** Hawiye/Habr Gedir/Saad **deployment** Southern Mogadishu **key leader** Ali Hassan Osman ‘Ato’

**MOHAMMED OMAR FINISH’S FACTION** est tp str: 800 standing militia **clan** Hawiye/Abgal **deployment** parts of Medina district in Southern Mogadishu and Jazeera airstrip

**USC/SOMALI SALVATION ALLIANCE** est tp str: 1,500–2,000 standing militia **clan** Hawiye/Abgal **deployment** parts of Northern Mogadishu and the Medina district of Southern Mogadishu and Middle Shabelle district **key leader** Muse Sudi Yalahow

<sup>1</sup>The RRA split in the autumn of 2002. It is now unclear how many RRA troops remain under the command of Shatigadud and how many have defected to Shaikh Aden Madobe’s faction.

<sup>2</sup>The SNF underwent a split in its forces along clan lines at the end of 2001. Whilst Bihi is now allied to the JVA, his former deputy Sayeed head a separate faction allied to the SRRC.

#### Notes

<sup>1</sup> The adaptation of the CFE abandons the group structure (North Atlantic Group, Budapest/Tashkent Group) for a system of national and territorial ceilings. The amendment enters into force when CFE States Parties have ratified the change.

<sup>2</sup> Includes TLE with land-based maritime forces (Marines, Naval Infantry etc.)

<sup>3</sup> Does not include land-based maritime aircraft for which a separate limit has been set.

<sup>4</sup> Cz, Hu and Pl became NATO members on 12 March 1999.

<sup>5</sup> Manpower and TLE is for that in the Atlantic to the Urals (ATTU) zone only.

## Military Space in the Era of Network-Centric Operations

The US dominates military space, accounting for 90% of the estimated \$22bn spent annually on this aspect of defence worldwide. If spending on items indirectly related to space were included, such as Global Positioning System (GPS)-based hardware and services, US dominance would be even more pronounced. Meanwhile, Russia struggles to maintain its remaining infrastructure in orbit, while military space spending by all the EU countries together is less than one twenty-fifth of comparable US expenditures.

Military satellites have accounted for about 30% of all space launches in recent years. From mid-2003 to mid-2004, there were nine US, eight Russian and one Chinese military satellite launches, including:

- **US** 3 navigation, 2 communications, 1 SIGINT, 1 weather, 1 ocean surveillance, 1 early warning;
- **Russia** 3 navigation, 3 relay, 2 communications, 1 ELINT, 1 ocean surveillance, 1 photo-reconnaissance (film-return);
- **China** 1 photo-reconnaissance (film-return).

The small 'space club' of nations with operational launchers of their own includes Russia, the US, the European Space Agency, China, India, Japan and Israel. Given the potential dual civil-military use of space launchers, stringent non-proliferation controls – such as the Missile Technology Control Regime (MTCR) – have been put in place.

The ability to launch and service satellites as required is still an aspiration rather than a reality – particularly for heavy payloads – for the space club. Launch vehicles suffer technical failure and can be unavailable for extended periods (the response time from launch request to availability is currently measured in months or years). Launch costs, at between \$15–125m often equal or exceed the value of payloads. Recent rapid progress in electronic miniaturisation, however, has enabled new players, including developing countries and small private enterprises, to build affordable satellites with off-the-shelf components. Most of these micro-satellites, though, can only offer limited capabilities.

### Commercial space technology for defence

A serious, but vulnerable, commercial market exists in geostationary telecommunications satellites – at the high end of satellite technology – and which include mobile communications systems such as Inmarsat-3, Thuraya and Iridium. Military users are taking advantage of this market in various ways, including:

- leasing required transponder time and bandwidth from commercial operators;
- operating secondary defence payloads on commercial telecommunications satellites – for example, the recently launched Australian defence package on Optus C1;
- adapting existing commercial satellite models for military specifications, for example, the future US Wideband Gapfiller Satellites (WGS) and French Syracuse 3 constellation;
- purchasing a portion of a privately owned satellites for security purposes, such as Spainsat (expected in 2004);
- contracting out secure military satellite communications services to a commercial operator – like the British Skynet 5 programme, a private finance initiative in cooperation with EADS.

Sustained commercialisation in space-based mobile communications, with multi-satellite constellations in low orbit, has failed to live up to expectations in recent years. It is uncertain, for

example, if the commercial business model of the European *Galileo* system, which is likely to be delayed, is going to succeed, while the existing GPS system provides free service. Nevertheless, the *Galileo* programme is set to continue. Under a recent US-EU agreement, it will be made technically compatible with GPS.

Commercial high-resolution imagery from space has been available since the launch of *Ikonos-1B* in 1999. At available resolution levels, such imagery is useful for detection and recognition of objects of military relevance, but often offers insufficient description and analysis. However, while it can take months before a desired image is provided, the public availability of archived high-resolution imagery and related mapping and geo-information products has permitted some strategic transparency. In addition, openly available results from environmental research and monitoring are increasingly returning militarily useful data from space, including high-precision digital elevation models that permit accurate three-dimensional mapping, visualisation and targeting.

The commercial viability of privately operated imaging satellites remains dependent upon public purchases, largely by defence ministries and intelligence agencies. The US government is by far the largest customer of all private operators. Its dominant purchasing power continues to afford the US effective 'shutter control' over commercial high-resolution imagery during crises. As outlined in the 2001 National Imagery and Mapping Agency (NIMA) commission report, *The Information Edge*, the US has assigned a key role to imagery-based, geo-referenced, time-tagged, all-source information for intelligence and operations. This database is maintained by the National Geospatial-Intelligence Agency (NGA), as the National Imagery and Mapping Agency (NIMA) was renamed in 2003 to reflect this innovative conceptual approach.

### Transformed strategic role of space

During the Cold War, space was in itself of strategic importance. Deterrence rested on intercontinental missiles as well as on satellite-based sensors and communications links for non-intrusive surveillance. Today, airborne surveillance can be performed without strategic risk in most regions. UAVs at high altitude can perform similar sensing and relay tasks as satellites. Fibre-optic cables and broadband wireless communication provide alternative over-the-horizon links in many parts of the world.

The unique characteristics of space – to provide unimpeded, continuous and persistent global coverage – continue to offer strong advantages for expeditionary warfare as well as for defence against terrorism and other asymmetric threats as well as disaster management. The very notion of an active global strategy to counter threats from Weapons of Mass Destruction (WMD) proliferation, terrorism and regional conflicts would have been unthinkable before the space age.

From an operational perspective, the strategic rationale for military space activities has changed fundamentally. The value of the space dimension derives from its supporting role for other elements of military and political strength across the full range of security and defence tasks. Capabilities result from a combination of elements, using both space and other means in a coherent way. In stark contrast to the extreme restrictions that were placed on access to space capabilities in the past, the main challenge is now to assure optimal use of space assets in such operations and timely dissemination of space-derived products to those who may have use for them in support of security and defence, including those responsible for intelligence, warning and rapid interdiction in the campaign against international terrorist groups.

### Information-driven operations

US doctrine, which began with the 1996 publication of *Joint Vision 2010*, rests on the assumption that military success results from the effective use of superior information combined with the

accelerated pace of operations that has become possible with advanced information and communications technologies. In this approach, space – the ‘ultimate high ground’ – plays an indispensable role as an enabler for information superiority and dominant manoeuvre, in addition to supporting many other aspects of military activity.

By providing swift, accurate and continuous information, as well as precise navigation at all times and in all weather conditions, space assets enable and support enhanced situational awareness and target development in a coherent and continuous operational picture. The use of space assets also permit a faster decision-making cycles. Movements can be monitored in real time at extended detection ranges. Forces, equipment and supplies can be tracked. Equipment can be operated remotely. With support from space, weapons are guided in ways that decouple range from accuracy and enable precision engagement, minimising attrition and losses while increasing the chances of meeting desired effects. These benefits of space – especially for command, control and communications (C3) and intelligence, surveillance, target acquisition and reconnaissance (ISTAR) – are obvious. In practice, however, even the US has yet to take full advantage of them.

*Operation Iraqi Freedom*, for example, saw mixed results from military space. On a much larger scale than the Kosovo campaign, the Iraq war employed global broadband wireless communications, a fully functional GPS system, and operational exploitation of space-based intelligence. GPS-guided bombs proved to be cost-effective and highly efficient stand-off precision weapons that allowed a new form of close air support from high altitudes. The US air campaign came a long way to realising the direct sensor-to-shooter link that is at the heart of network-oriented operations. Most ground units, however, did not benefit from current satellite imagery support during their rapid advance on Baghdad. In part, this reflected US commanders’ preference to maintain momentum with speed and mobility over that of waiting for improved information.

The absence of suspected WMD facilities in Iraq showed the limitations of intelligence gathered using remote technical means. Following the fall of Saddam, it became clear that for stability operations in a hostile environment, network-based information superiority and situational awareness is still in its infancy. But it is not irrelevant in such missions. The contrast between the swift, information-driven invasion, and the difficulties faced in the period of occupation underline the view that network-centric operations have wider applications than previously realised. Network-centric operations not only have the potential to shorten sensor-to-shooter time in combat, but also the observation-to-action time in non-combat operations, such as humanitarian assistance, emergency response, terror prevention and crime interdiction.

### **Space-enabled networks**

The crucial advantage of network-centric operations results from digitised interoperability of systems and direct, flexible, and effects-oriented links between information, decision-makers and forces. By embedding space assets in a joint, network-centric organisation, local and wide-area networks can be linked to each other and to central command authorities worldwide without geographical limitations. The US Army is introducing brigade-level reconnaissance, surveillance, targeting and acquisition (RSTA) squadrons that will provide focused intelligence to commanders and troops on this basis.

A networked system allows both centralised and decentralised leadership to access the information held by the network. An example is the Pentagon’s concept of a Global Information Grid (GIG) that binds together all available means for collecting, processing, storing, disseminating and managing information used by forces and decision-makers. Furthermore, a web-style sharing model creates coherence and central control while allowing users to retrieve and contribute information. Such networks facilitate multiple simultaneous missions in separate geographic

regions while generating qualitatively new capabilities, for example: detection, tracking and denial of cruise missile attacks.

However, networks of this nature result in increased bandwidth requirements – far beyond the levels currently planned for. Data transmitted by a single multi-sensor platform such as the *Global Hawk* UAV can consume up to 0.5Gbit/s. According to low-end estimates, US forces will require 40Gbit/s communications bandwidth by 2010, of which 10Gbit/s must be space-based. It is expected that more than half of that capability can be transmitted via leased commercial satellites. Nevertheless, US secure military satellite communications capacity will have to expand by, at least, a factor of ten. Given the rapidly growing requirements for video feeds and ubiquitous broadband access – on a par with the civilian world – requirements are likely to increase further.

While the US has equipment either in place, or in the pipeline, to handle such developments, other countries must start from scratch as they build a communications backbone for digitisation, network-centric operations and transformation. The relative importance of space for their military communication requirements is shaped by two factors: whether there is sufficient domestic terrestrial communications capacity for homeland defence, and to what extent they are committed to overseas operations where only satellites can provide sufficient links.

### Network-enabled allies

Given the wide gap in capabilities and concepts between the US and other countries, Washington's allies face the following questions: how can they upgrade their own capabilities? How can they cooperate with the US in multinational operations? With respect to space: do they need space capabilities of their own? And how can they benefit from space capabilities provided by the US, as an element of its network-centric system of system? Through bilateral links and NATO's Allied Command Transformation (ACT), America's allies can learn and judge how best to adapt to the emerging new US mode of operations for their own purposes, and especially for coalition warfare.

In the UK, network-enabled capability (NEC) has already been put at the core of the projected changes in force structure. Other countries seem to be moving in the same direction: France, for example, has developed a concept of 'combat aéroterrestre en réseau'. Network-enabling can be perceived either as an interim approach towards eventual full adoption of the NCW concept, or as a more limited ambition of plugging into C4ISR structures provided by the US in coalition operations, while otherwise retaining traditional operational concepts and structures. The essential point, for the time being, is achieving and maintaining coherence, interoperability and joined-up functionality on a national level and with allies.

When plugging into US-dominated network-centric operations, allies will need to comprehend factors such as 'ownership', control, and their role in battle management. Ironically, the best way to ensure influence in a network environment may well be full immersion in the information flow. In the context of Network Centric Warfare (NCW), shared awareness of the situation would likely be a central precondition for effective partnership. This raises the stakes for allies and partners of the US to define and implement their response to network-centric transformation, and its space dimension, if they do not wish to lose established channels of military cooperation. NATO countries have agreed to build a joint C4ISR architecture that would enable seamless, networked sharing of intelligence between allied forces in operations. However, in spite of procedures for information-embedded access controls, established rules and classification requirements continue to place severe practical limitations on the material agencies and nations are prepared to share.

There is a need to reform some government structures and forces so that they are able to exploit the new sensor, information and communications technologies and the resulting innovative

options for employing armed forces. Casting the effects of NCW as mere evolution may not be a sufficiently forceful approach to change minds and structures. On the other hand, focusing too much on a new paradigm risks neglecting more down-to-earth needs of combatants, peacekeepers and political leaders.

### **Space transformation**

The operational benefits offered by existing surveillance, reconnaissance and signals-intelligence satellites – all still designed to Cold War specifications – is limited. For the last eight years, the US has been trying to define and develop the space components of its future integrated overhead intelligence-gathering architecture. The goal was to replace existing large platforms with a more versatile set of satellites and gain much-improved capabilities for less money.

Cost overruns and delays have led to renewed calls for applying 'spiral experimentation development' to national security space acquisition in order to have affordable technology to hand. In fact, a new generation of small 'tactical' reconnaissance and communications satellites, operated in an integrated fashion with UAVs and other systems, would promise a more effective path towards a truly space-enabled, network-centric military. It remains unclear whether this transformational approach will prevail. At its core, current US planning for space communications and intelligence continues to rely on large platforms with long gestation periods.

Other countries without military space traditions may indeed be in a better position than the US to take full advantage of the network-centric potential of space. Many small-satellite developments are being pursued in a number of countries. If these initiatives are to turn into serious contributions to network-centric transformation and make space responsive to operational needs, the following are necessary: a capable, flexible broadband communications backbone; network-focused equipment acquisition; a cadre of space-aware professionals; an accepted network-enabled concept of operations; and sufficient data fusion and analysis capacity. If these conditions are met, relatively modest space efforts can create decisive new capabilities for countries without a long history in space. In an alliance context, such capabilities may even offer some attractive additional value to the US.

### **Strategies for non-US military space**

In most national defence establishments, the space dimension has not yet found institutional recognition and an adequate voice. Space acquisition programmes remain at risk of being smothered by the platform replacement needs of the established services. Launch failures, such as the failure of the second flight of Japan's intelligence gathering satellites in 2003, may deal a heavy blow to poorly funded space programmes with ambivalent political support. The emergence of a global commercial market for high-resolution imagery, a deliberate policy choice of the US in 1993, has helped, to a certain degree, to guide countries away from pursuing risky and costly satellite programmes of their own.

It is often overlooked that launching a satellite is just one part of a meaningful military space programme. For an operationally useful space effort, a long-term commitment is required to keep the space components in proper working order, both in orbit and on the ground. The expected lifetime of satellites is limited, though in the case of communications satellites it has tripled to 15 years as technologies have matured. Other types of satellites in low-earth orbit need replacement in shorter intervals. Multi-satellite constellations such as GPS lose most of their value if they are allowed to erode. Given the harsh environment in space and the frailty of space hardware, it is advisable to err on the side of caution in estimating maintenance pressures and costs.

The possession of satellites is still considered as a status symbol by some. However, in a joint and networked mode of operation, the main concern is that a sufficiently dense and resilient set of nodes for rapid information flow and interaction is provided. For certain purposes, for example, this requires recourse to communications platforms in space. But in the end, it matters little whose they are.

The US has offered benefits from its classified space assets to a number of countries engaged in close intelligence cooperation. There may also have been one or more cases where other governments shared the costs of such US systems in return for control and assured access. Given the enormous asymmetry between the US and its allies in space, this approach, where it is available, would most likely qualify as the most effective from the viewpoint of operational advantages.

Still, there is value in having some capacity of one's own, if only for being able to check the quality and integrity of shared information. For example, the projected German *SAR-Lupe* radar surveillance small-satellite constellation is expected to offer this important national benefit while also supporting the evolution of European defence and intelligence cooperation. At the EU level, the desired capacity to conduct larger autonomous operations, above division level, has significant space implications. The required C3I infrastructure for such operations is unavailable to Europeans today even with recourse to NATO assets except on the occasions when the US would be prepared to provide it. In the past, a US backbone had always been assumed.

### Merging civil and defence requirements?

In Europe, the French space programme represents more than half of military space spending, and Paris is able to shape the conceptual approach to military space in the framework of Europe's security and defence policy. Since 2001, it has won approval from all major continental Western European countries on common operational requirements for reconnaissance systems. *Helios-2*, *SAR-Lupe* and other future systems will be operated in a combined framework that allows reciprocal access but keeps ownership and utilisation under national control.

France also concluded bilateral sharing arrangements for its future *Syracuse 3* communications satellites with several neighbouring countries. Under a recent service contract with NATO, French, Italian and British military communications satellites will replace NATO's own ageing satellite and cover the Alliance's SHF and UHF requirements. In effect, Europeans seem to be moving towards a shared transponder pool for secure satellite communications. However, the UK and Netherlands have announced their intention to employ the US Advanced EHF satellites (AEHF), to be available from 2007, for their EHF-band communication requirements which are particularly important for secure broadband communications.

Governments appear to shy away from multilaterally conceived and owned military space assets. In Europe, however, it is uncertain if the approach pursued so far will be capable of delivering a sufficiently strong impulse for European military space planners to create the basis for space-aware, network-enabled, transformational operations. In most space-capable nations, limited budgets, facilities and engineering resources have always produced overlaps between civil and military government programmes in space. In Russia, it is almost impossible to separate the two. The US, too, utilises NASA facilities and spacecraft for defence purposes. On the commercial side, new optical and radar imaging systems are designed to serve both defence and civilian customers.

Building on the multi-purpose nature of space, which offers a range of capabilities for various policy areas, the European Commission's research policy has assumed a key role in helping to match Europe's security and defence ambitions and its available resources in space, both by offering additional sources of funding and by fostering a coherent policy approach in conjunction with the European Space Agency (ESA). While the EU and the ESA are moving away from their

former ban on defence involvement, the focus is still on non-military security applications. Disaster response, humanitarian missions, coast guard and border police indeed require similar capabilities as the military, and duplication is unaffordable. Through programmes such as the *Galileo* navigation system and GMES (exploitation of monitoring data for security purposes) the EU is trying to create a multinational, joined-up R&D effort that could lead to a European space backbone, if it were closely linked with the ongoing experimentation and adaptation of European armed forces to a network-enabled concept of operations.

### Breaking the backbone?

Over reliance on space-based assets also creates new risks and vulnerabilities. In a networked structure that takes worldwide data and communications relay via satellites for granted and has come to expect real-time warning, cueing and targeting from space, the possible loss of the required space assets becomes a major concern. The Rumsfeld Commission report of January 2001 on national security space management and organisation highlighted this problem and warned of a possible 'space Pearl Harbor'.

Under the headline of 'space control', the US military is now working towards the capability to detect, prevent and deny counter-space operations, including defence against threats such as the jamming of uplink and downlink signals, blinding of sensors and physical attack on orbital or ground components. Possible uses of space-based weapons to defend and attack space, air, sea and land targets are being studied. There are, however, strong reasons for the US, as the country most vulnerable to attacks on its space infrastructure, to maintain its self-restraint as long as possible. International law does not generally ban weapons in space, but a broad political preference exists against considering attacks in or from space as acceptable forms of warfare.

At the political level, military space has become too important to the effective employment of defence and security forces for it to be discussed in terms of 'militarisation of space', as developed during the East-West conflict, or the Strategic Defence Initiative ('Star Wars'). The practical advantages of advanced space-based communications and sensor networks are bound to swiftly change the modus operandi of armed forces worldwide – and that of non-governmental armed groups and terrorists as well.

## United States

Following months of uncertainty and tentative recovery the US economy moved ahead strongly in the second half of 2003. Real GDP grew significantly – by 8.25% in the third quarter and 4% in the fourth – contributing to annual growth of 3.1%. With several forward-looking indicators pointing to a continued robust expansion, the IMF has raised its growth forecast for 2004 to 4.5%. The economy continues to benefit from highly stimulative monetary and fiscal policies introduced after the bursting of the high-tech bubble. Growth was led by a number of factors: tax cuts that boosted disposable income and private consumption, low interest rates leading to a significant boom in mortgage refinancing, a rebound in business investment and the stimulus of increased government spending – especially on defence and homeland security.

To date the most disappointing and unusual aspect of this recovery has been the lack of new job creation which although improving in the second quarter of 2004, is still extremely slow by historical standards. In previous economic upswings, employment has risen by an average of 7.4% in the first 2–3 years of the recovery. However, in the same period this time around employment has risen by just 0.3% suggesting that any renewed weakness in employment would pose a downward risk to household income and consumption. In light of the improving overall economic environment, however, the Federal Reserve Bank raised interest rates in June from their 45-year low of 1% to 1.25% signalling the start of a new upward trend in rates intended to combat emerging inflationary pressures.

While the expansionary fiscal policy implemented by the US has provided valuable support to the recovery, higher security related expenditure at the same time as tax cuts has contributed to a significant deterioration of the government's budget position. And although the Bush administration has pledged to cut the deficit in half within five years, as yet, no credible measures have been introduced to achieve that goal. Furthermore, without action, the position is set to deteriorate significantly in the medium term with the retirement of the baby boom generation later this decade. Calculations by the Congressional Budget Office (CBO) indicate that, over the next 10 years, the Medicare and Social Security programmes will run a combined deficit of US\$96bn that will increase to a cumulative deficit of US\$6.6tr between 2003 and 2026.

### DEFENCE BUDGET FY2005

Despite the deteriorating fiscal position, the Bush administration's federal budget request for fiscal year (FY)2005, included a 7.2% (excluding FY2004 Iraq supplemental) increase in funds for national defence. Increases were fairly even across the board with personnel funds up 6.4%, Operation and Maintenance (O&M) up 9.3%, Research and Development (R&D) up 7.1%. Procurement funding, however, was virtually unchanged. As in the past two years the FY2005 request does not include explicit funding for continuing US military operations in Afghanistan or Iraq and the administration will continue to rely on supplemental appropriations to fund these activities. In this respect the

<sup>a</sup> Including US\$72.2bn emergency and non-emergency supplementals

<sup>b</sup> Including US\$66.1bn emergency and non-emergency supplementals

Pentagon received US\$72.2bn for FY2003, US\$66.1bn for FY2004 and although President Bush's request for US\$25bn (to pay for costs in FY2005) was approved as part of the Defense Appropriations Budget, it is still awaiting final Congressional approval as part of the National Defense Authorization Act and further request will need to be submitted, most probably after November's presidential election.

In many respects the FY2005 budget contains few surprises but leaves several key questions about the size and shape of the US military in coming years unanswered. This is not wholly surprising given the adoption in 2003 by the Department of Defense (DoD) of a new two-year Programming, Budgeting and Execution (PBE) programme that changes the annual old budgeting system. As part of the introduction of these changes the FY2005 budget was labelled as an abbreviated review and amendment programme. Indeed, on presentation of the budget in February 2004, Secretary of Defense Donald Rumsfeld observed that his department 'made changes to just 5% of planned 2005 budget', leaving the probability that next year's FY2006 budget may well contain some more significant spending decisions.

However, the key variable that is likely to determine the evolution of the US defence budget in coming years may not be directly related to military needs and ambitions, but a reflection of the changing demographics of the country. In January 2001 the CBO projected federal budget surpluses totalling about US\$5.6trillion over the FY2002–11 period. Following the introduction of the Bush administration's tax cut package and increased federal spending since 11 September 2001, that forecast has since been reversed. The CBO is now forecasting a deficit of US\$1.9trillion over the coming decade, possibly rising to US\$5trillion if tax cuts that are due to expire in 2010 are extended beyond that time. Furthermore the imminent retirement of the baby boomer generation will place increasing strains on an already fragile budget position. If a serious effort to address the budget deficit is adopted then history suggests that cuts, or at least slower rates of growth, in defence spending are likely to be part of the solution. Between FY1985–90, before the Cold War was over, there was bipartisan agreement to reduce defence spending by 12% in real terms in an effort to begin reducing budget deficits.

While current security concerns and the international threat of terrorism make a similar reduction in top-line defence spending unlikely, future growth of the defence budget is probably not going to be sufficient to execute the DoD's ambitious modernisation efforts. There is already a widely held view that to execute current plans and make up for the lack of investment during the Clinton Administration the procurement budget would today need to be around US\$20–25bn higher than that proposed in FY2005 and under current projections this is not scheduled to occur until 2008.

The FY2005 budget also includes the provision for a temporary increase in the army's end strength of up to 30,000 troops and the creation of an additional flexible and self-sufficient 10 brigades. Army Chief of Staff General Peter Schoomaker has indicated that he expects the additional personnel to be required for about four years, although it is unclear if this plan will satisfy widespread calls in Congress to increase US military end strength by as many as 80,000. According to Dov Zakheim, then DoD comptroller, funding to support temporary increases in army end strength will come from supplemental legislation and will not be programmed into the annual budget.

However, should the temporary increase in numbers become more permanent then rising personnel and operational and maintenance costs would start to consume a higher proportion of defence funding.

Although the domestic economic background is troublesome, US commitment to its defence superiority is such that it is difficult to see defence spending falling significantly from its current level of 3.4% of GDP. Should John Kerry win the November 2004 presidential election then the new administration will still be faced with the same security concerns and Congress, of course, could remain in Republican hands. It would appear, therefore, that whoever wins the election, defence spending is unlikely to deviate significantly from its current share of national income and that this would appear insufficient to implement all of the DoD's current plans. In order to make their funds go further, therefore, some procurement consolidation seems inevitable. In terms of individual programmes this is likely to lead to a survival of the fittest and a juggling act between upgrading and extending the life of existing platforms and reducing the number of platforms of new major defence modernisation programmes.

---

## AIR FORCE

---

The air force requested \$120.5bn in FY2005, an 8.6% increase on the previous year. Of that, \$20.7bn is for procurement, \$32.8bn for personnel, \$27.1bn for readiness and \$15.3bn for research and development. While the bulk of the FY2004 budget request is to fund a number of long-time priorities, increased funds are available for transformation capabilities such as space and unmanned systems.

As in recent years the biggest request is for the F/A-22 *Raptor* programme. Although its budget has been held steady at US\$4.1bn in FY2005, improving production efficiency has allowed the air force to increase deliveries by two aircraft to 24 in 2005, rising to 32 by 2007. Following the cancellation of the army's *Comanche* helicopter programme (see below) there has been renewed speculation that the *Raptor*, designed to replace the F-15, is next in line for a programme change that could see cuts in the number of aircraft to be procured. Initially the air force planned for a total of 750 F-22s but over the years this figure has been gradually reduced to a current target acquisition of 276. If the programme were cancelled next year then the air force would have only 122 F-22s in service. More likely would be a decision to let the programme slip beyond the current schedule that plans for 214 deliveries by 2009.

The major change in the FY2005 budget request sees a restructuring of the multi-service Joint Strike Fighter (JSF). Both the air force and navy will each commit \$2.3bn to the project in FY2005 but due to the continuing problem over the weight of the aircraft, low-rate initial production has been delayed by a year. The total cost estimate for the system development and demonstration phase has increased from US\$33bn to US\$40.5bn. As of October 2003, the US requirement for versions of the JSF totals 1,730 for the conventional take off and landing aircraft for the air force, 680 of the short take off/carrier take off and vertical landing version for the navy and marine corps and another 150 for the UK. It is anticipated that there will be a significant international market for the fighter as well.

Airlift capability receives a boost in FY2005 with US\$3.8bn for 14 C-17 *Globemaster III* transport aircraft, \$732m for 11 C-130J *Hercules* tactical transport aircraft and \$366m for three CV-22 *Osprey* tilt rotar aircraft.

Among key communications and intelligence systems, the Joint Tactical Radio System receives \$600m, the Transformational Communications System receives \$775m and the space-based radar receives \$408m for continued development. Unmanned systems, another centre piece of the air force's transformation process also receive extra funding in the FY2005 budget. Procurement plans include the purchase of four *Global Hawk* aircraft for \$359m and nine *Predator* aircraft for \$146m. There is a new consolidated body to continue the development of the air force and navy unmanned combat aerial vehicle. Known as Joint Unmanned Combat Air Systems (J-UCAS) it will develop a common operating system and enhance competition to achieve the best capabilities and accelerate the operational assessment phase to FY2007-09. Total unmanned vehicle research will amount to over \$2bn under the proposal.

Recapitalisation of the air force's tanker fleet became one of the most controversial issues during the FY2004 budget process. Initially, the Pentagon announced plans to proceed with a multi-billion dollar deal to lease 100 Boeing KC-767 tankers; however the proposal failed to win Congressional approval. Instead, Congress proposed that a more cost-effective solution would require the DoD to lease just 20 aircraft and buy the remaining 80. However following revelations of irregularities between air force and Boeing representatives the deal was suspended whilst the Pentagon Inspector General investigated the claims. Finally, in June 2004, the Secretary of Defense announced that he had deferred a decision on the programme until additional studies are completed. The decision was based largely on a recommendation by the Defense Science Board Refuelling Task Force, which concluded that the corrosion suffered by the current fleet could be managed at a lower cost than previously estimated.

---

## NAVY

---

The navy's budget request for FY2005 totals \$119.4bn, including \$17bn for the marine corps, and begins a period of transition in shipbuilding as the last of the DDG-51 destroyers are built and the first DD(X) destroyer and Littoral

## 264 United States Part II

Combat Ship are procured. The budget provides \$11.1bn for the construction of nine ships (up from seven in FY2004 and five in FY2003) including: one SSN *Virginia*-class nuclear submarine; three *Arleigh Burke*-class destroyers; one DD(X) new surface combatant; one Littoral Combat Ship; one LPD-17 *San Antonio*-class amphibious transport ship. Between FY2005–09 the average shipbuilding rate will rise to 9.6 per year and the fleet will increase from 290 to 309. In addition to the headline purchases of ships and aircraft, the navy also plans to procure 293 Tactical *Tomahawk* cruise missiles, 75 Standard SAM and 71 Evolved *Sea Sparrow* Missiles.

The next phase of the Littoral Combat Ship programme will see both Lockheed Martin and General Dynamics' Bath Iron Works use R&D funds to design and deliver two vessels each between 2006–08. Thereafter the conventional procurement budget includes funding for the next nine vessels to be ordered from 2008–09. Although no total requirement for the ship has yet been established, a fleet of 60 is thought to be the target. The first DD(X) destroyer will also be financed under the new budgeting arrangement that allows for the lead ship of a new class to be financed from R&D funds. The programme will receive \$1.7bn in R&D funds in FY2005 and a total investment of \$17.6bn between FY2005–09 to purchase the first eight ships.

The navy is building on last year's decision to integrate their tactical air capabilities with the marine corps in order to reduce the number of aircraft required by the two forces and, together with the retirement of other older aircraft, this will reduce the aircraft fleet by 59, despite the budget provision to purchase 104 new aircraft in FY05.

## ARMY

The US Army's FY2005 budget request totals US\$97.2bn including \$11.7bn for procurement, \$32.6bn for operations and maintenance and \$10.4bn for research and development. The major procurement programme remains the Future Combat System for which \$3.2bn is requested, nearly double that of last year, and US\$905m to produce 310 *Stryker* armoured fighting vehicles to equip a fifth *Stryker* Brigade Combat Team. Other significant purchases include \$918m for eight V-22 *Osprey* tilt rotor vertical take off and landing aircraft, \$508m for 2,425 trucks in the Family of Medium Tactical Vehicles, \$489m for 108 *Patriot* PAC-3 air defence missiles and \$303m for 2,431 High Mobility Multipurpose Wheeled Vehicles (Humvees). Following General Peter Schoomaker's six month review of the army's aviation capability gaps it was decided that the troublesome RAH-66 *Comanche* stealth helicopter programme - for years the centre piece of the army's future aviation plans - should be cancelled. The helicopter, originally conceived in the early 1980s, had already consumed around US\$7bn in development funds, and procurement of the first 121 aircraft was going to cost a further US\$14.6bn. However, thanks to a new DoD policy that allows the individual services to scrap programmes with the assurance that any savings generated will be returned to their own modernisation accounts, rather than dispersed to cover other needs elsewhere in the armed forces, army planners decided that the funds would be better invested elsewhere. In addition to concerns over the cost of the programme, officials also pointed out that the operational environment predominating at the launch of the *Comanche* has changed. In particular, recent operations in Afghanistan and Iraq have elevated the importance of helicopters possessing an active self protection system, and the *Comanche* was not designed with an active jamming capability in mind - its main asset was always intended to be stealth technology. With the savings accruing from the cancellation, the army believes that it can solve most of its desperately needed modernisation plans resulting from years of budget shortfalls. Although no detailed plan has emerged, indications are that funds earmarked for the *Comanche* will instead be used to procure more active self-protection systems, Boeing AH-64D *Apache* upgrades, additional CH-47 *Chinooks* and Sikorsky UH-60 *Black Hawks* as well as three new programmes - 368 armed reconnaissance helicopters, 303 light utility helicopters and 25 fixed wing intra-theatre transporters.

## MISSILE DEFENCE

The Ballistic Missile Defense programme receives more funding than any other weapons system. The Missile Defense Agency (MDA) FY2005 request is set at US\$9.1bn up from US\$7.6bn in FY2004 but this does not include programmes

funded from outside the MDA such as the army's *Patriot* PAC-3 or the SBIRS-High Satellite programmes; including these elements brings the total to \$10.7bn. The FY2005 spending plan includes \$900m to provide an initial defensive capability and \$600m for more advanced systems, but defers the Boeing Airborne Laser programme and slows purchases of Standard Missile-3 sea based interceptors following the failure of an intercept test in June 2003. The MDA had planned to deploy up to 20 SM-3 missiles next year on three *Aegis*-equipped cruisers but reduced that number to 10 following a disappointing test result. In July 2004 the first interceptor was installed in its silo at Fort Greeley, Alaska. This, together with a *Cobra Dane* radar in the Aleutian Islands, an upgraded early warning radar at Beale Air Force Base and an *Aegis* surveillance vessel, is intended to provide an initial capability to intercept primitive missile threats. In 2005, a second upgraded early warning radar will be activated at Fylingdales in the UK. The Pentagon has begun preliminary surveys to determine in which European countries the proposed 10 land-based interceptors will be located when construction begins in 2006.

#### Notes

FY = Fiscal Year (1 October–30 September)

<sup>1</sup> The National Defense Budget Function subsumes funding for the DoD, the DoE Atomic Energy Defense Activities and some smaller support agencies (including Federal Emergency Management and Selective Service System). It does not include funding for International Security Assistance (under International Affairs), the Veterans Administration, the US Coast Guard (Department of Transport), nor for the National Aeronautics and Space Administration (NASA). Funding for civil projects administered by the DoD is excluded from the figures cited here.

<sup>2</sup> Early in each calendar year, the US government presents its defence budget to Congress for the next fiscal year which begins on 1 October. It also presents its Future Years' Defense Program (FYDP), which covers the next fiscal year plus the following five. Until approved by Congress, the Budget is called the Budget Request; after approval, it becomes the Budget Authority.

<sup>3</sup> Definitions of US budget terms: **Authorisation** establishes

or maintains a government programme or agency by defining its scope. Authorising legislation is normally a prerequisite for appropriations and may set specific limits on the amount that may be appropriated. An authorisation, however, does not make money available. **Budget Authority** is the legal authority for an agency to enter into obligations for the provision of goods or services. It may be available for one or more years. **Appropriation** is one form of Budget Authority provided by Congress for funding an agency, department or programme for a given length of time and for specific purposes. Funds will not necessarily all be spent in the year in which they are initially provided. **Obligation** is an order placed, contract awarded, service agreement undertaken or other commitment made by federal agencies during a given period which will require outlays during the same or some future period. **Outlays** are money spent by a federal agency from funds provided by Congress. Outlays in a given fiscal year are a result of obligations that in turn follow the provision of Budget Authority.

## NATO Europe

Despite the emergent global recovery, the economies of the major Eurozone countries struggled to make significant progress in 2003/04. Throughout the Eurozone growth reached just 0.4% in 2003 and is projected to increase to only 1.75% in 2004. The sharp pick-up in global trade was a key supportive factor and, despite the stronger Euro making Eurozone exports less competitive, export growth will continue to be important in 2004, particularly given the weak domestic background. Subdued consumer sentiment and high unemployment continue to put a brake on domestic consumers, while business investment remains hampered by highly leveraged balance sheets. Low economic growth continues to have an impact on many countries' fiscal position. In 2004 Germany, Italy, the Netherlands, Greece and Portugal will exceed the debt rules of the suspended Stability and Growth Pact in 2004 and despite a variety of measures to address the problem, the signs are that several will again fail to achieve the 3% debt to GDP limit in 2005. Following a decision by the European Court of Justice in July 2004 that EU finance ministers had broken the law by suspending the budget rules in November 2003, ministers have agreed to make the pact 'more credible without rewriting it'.

However, the weakness and structural problems of core European economies, together with the constraints imposed by rising budget deficits, and the absence of an increase in the public's perception of any military threat suggest that the current constraints on European defence budgets will persist.

Of the seven new countries that joined NATO in March 2004, only Slovenia has failed to achieve the suggested target, set by NATO, of spending 2% of GDP on defence. By comparison, the Baltic nations have successfully boosted defence spending from levels that averaged around 1% of GDP throughout the 1990s to achieve the required level. In total NATO's new members outlaid US\$2.2bn on defence in 2003.

The creation of a European Defence Agency (EDA) by the 25 EU nations as an integral part of the European Security and Defence Policy (ESDP) is intended to lead to better integration of EU defence activities as well as provide greater efficiency and value for money amongst EU procurement programmes. Although the new institution will only have a small budget to begin its operations, its remit would appear to be very broad. The agency will have several functions related to capability development, defence research and technology, management of cooperative programmes and reinforcement of European industry, including the implementation of a European defence equipment market. Although the EDA's exact role has yet to fully emerge, it will not take over the role of the Organisation Conjoint de Cooperation en matiere d'Armement (OCCAR), currently managing certain joint procurement activities for France, Germany, Italy and the UK, nor act as a regulator of the EU defence industrial base.

Once again the UK economy was the best performing among major European countries, recording growth of 2.3% and enabling Chancellor of the Exchequer Gordon Brown to unveil a three-year spending plan including an annual 1.4% real terms increase in the defence budget. The 2004 Spending Review continued the growth in the defence

**Table 17 NATO-ex US Regional Defence Expenditure as % of GDP 1993–2003**

## 272 NATO Europe Part II

budget initiated in the previous Review, undertaken in 2002. However, when taking inflation into account the defence budget in 2004 is the same as it was in 1995. The 2004 defence budget, as measured on a cash basis, will amount to £26.4bn, rising to £29.9bn in 2007. (In recent years the Ministry of Defence (MoD) has introduced a different method of accounting known as Resource Account Budgeting (RAB) which takes into account the depreciation of military assets and by this standard the 2004 budget measures over £30bn. For purposes of comparison *The Military Balance* will continue to publish figures based on the previous cash accounting basis, where possible). The 2004 Spending

### Major Italian Equipment Programmes 2004

Eurofighter	€434.1m
NH90 helicopters	€259.1m
Tornado	€186.5m
Andrea Doria	€185.9m
C-130J	€157.2m
Horizon	€155.3m
JSF	€126.0m
B767 tankers	€116.1m
U212 submarines	€104.8m

Review came several months after the publication in December of a Defence White Paper entitled *Delivering Security in a Changing World* which stressed the importance of continuing to develop more mobile and flexible forces by exploiting a network-enabled-capability (NEC) to achieve greater effectiveness. The paper suggested that the UK armed forces would in future rely on fewer major platforms and outlined plans to reduce the number of *Challenger 2* main battle tanks in service by around 60. The Defence White Paper was followed in July 2004 by Defence Minister Geoff Hoon announcing the biggest cuts in a generation to both manpower and equipment. At the heart of the restructuring will be the loss of around 20,000 military and civilian personnel – 7,500 from the air force, 1,500 from the navy, 1,500 from the army and 10,000 civilian posts. In terms of equipment, the navy will lay off three Type 42 destroyers and three Type 23 frigates reducing the fleet to a total of 25. The number of Type 45 destroyers to be purchased will be reduced from 12 to eight and the number of nuclear attack submarines will be reduced from the planned 10 to eight. The air force will disband one *Tornado* air defence squadron and retire the entire *Jaguar*

force by 2007. Airlift capability will be increased with the purchase of 5 C-17 *Globemaster* aircraft, four of which are currently leased. In addition to the cuts in manpower and equipment, the MoD has pledged to achieve an annual £1bn in savings from improved procurement and logistics procedures, a further £1bn through better use of assets and staff, £300m through rationalisation and £300m through infrastructure and equipment management improvements.

Whilst the restructuring was repeatedly referred to as a shift away from an 'emphasis on numbers of platforms and people towards embracing the opportunities presented by new technologies and NEC', rather than being triggered by a cash crisis, the cost overruns on several longstanding programmes as well as increased operational tempo continues to stretch the MoD budget. In its 'Major Project Report 2003', published in January 2004, the National Audit Office revealed that the Eurofighter *Typhoon*, *Astute* -class submarine, *Nimrod* MRA4 maritime patrol aircraft and *Brimstone* missile contributed £2.7bn to a total of £3.1bn in cost overruns in the 12-month period to 31 March 2003.

New procurement decisions included the selection of an Airbus A330-based solution to replace the RAF's ageing fleet of 26 in-flight refueling aircraft and Thales to provide the £800m *Watchkeeper* unmanned aerial vehicle capability. The tanker project is to be managed as a £13bn Private Finance Initiative (PFI) under which the AirTanker consortium will retain ownership of the aircraft and provide the MoD with a refueling capability as required. However, despite choosing the AirTanker team for the programme, such is the complexity of the PFI arrangements that disputes over the final cost of the arrangement has delayed the signing of the contract.

In line with the six-year allocation plan, adopted in 2002, for the period 2003–08 **France** increased its defence budget in 2004 by 4.3% to €32.4bn. The Ministry of Defence was the only government department to receive an increase in funds following a directive from Prime Minister Jean-Pierre Raffarin that other departments must freeze spending to help reduce France's growing budget deficit which will reach 3.6% of GDP in 2004. To help achieve the increase, the MoD will cut its number of civilian staff and reduce non-essential services as well as make economies elsewhere within the armed forces. Spending on equipment in 2004 increased by 9.5% to €14.9bn consistent with the six-year plan that calls for a total allocation of around €87.5bn on new procurement during the period. The air force will receive its first five *Rafale* B/C fighters as well as 110 SCALP-EG missiles and is also benefiting from the increase in funds injected into the spares and maintenance budget. By the end of 2003 the average availability rate of France's military aircraft had risen from 54.2% in 2001, to 69%. The navy will receive the third *Le Triomphant*-class SSBN and will order 16 M51 nuclear missiles that will come into service aboard the submarines in 2010. The budget also includes funding for the army's last batch of 50 *Giat Leclerc* main battle tanks and seven *Tiger* helicopters.

The ongoing switch to an all-professional military continues to put pressure on **Italian** defence finances. While the overall defence budget in 2004 (excluding peace-support operations, military pensions and the Carabinieri) is €14.1bn, 2.1% higher than in 2003, the phasing out of conscription has increased personnel costs by 6.7% to €7.49 whereas procurement investment will fall by 4.8% to €3.2bn. Of the three services the army will face the biggest cut in its procurement budget, down 12%, the air force equipment budget will fall 5.7% and the navy will receive 1.9% less than in 2003. As a result of the cuts in procurement spending projects to acquire four airborne early-warning aircraft, 12 maritime patrol aircraft, *Centauro* wheeled infantry fighting vehicles (IFVs) and an additional amphibious assault ship have been postponed. The army will continue, however, to acquire 200 *Oto Melara Dardo* IFVs, 500 *Puma*

armoured all-terrain vehicles, 112 *Alvis Hagglunds* BV206S all-terrain vehicles, the NH 90 tactical transport helicopter and the PzH 2000 self-propelled howitzer. Air force funding is provided for the *Tornado* Mid-Life Update, C-130J transporters, four Boeing 767 tankers, *Meteor* and *Storm Shadow* missiles. Major naval investments include the construction of the *Andrea Doria* aircraft carrier, two U212A submarines and two *Horizon*-class frigates.

Despite an increase in the 2004 defence budget of 5.3%, **Spanish** defence spending remains only 1.2% of GDP, down from 1.7% of GDP in 1996. Investment funds increase by 7% to €1.8bn including the first installment of a €4.6bn re-equipment programme announced in September 2003. The main elements of the 15-year package include:

- €1.75bn for four S-80-class diesel-electric submarines
- €1.36bn for 24 *Tiger* HAD attack helicopters
- €707m for 212 *Pizarro* armoured fighting vehicles
- €360m for a new strategic projection ship

Eurocopter Spain says that the *Tiger* helicopter, selected ahead of the AH-64D, will be built in Spain and armed with the MBDA Trigat MR anti-armour and *Mistral* air-to-air missiles. Deliveries will begin in 2007, but in the meantime France will provide Spain with three *Tiger* HAP variants next year (that will later be upgraded to HAD standard) allowing Spanish pilots to begin training as well as provide a minimum attack helicopter capability. The new strategic projection ship will have a displacement of 27,000 tonnes and feature a multipurpose platform capable of carrying a battalion of troops, as well as main battle tanks, transport helicopters, vertical take-off and landing aircraft and four landing craft. Most of the money for the new procurement package will come from the continuing sale of surplus and unused Ministry of Defence property, plus military related funds that have previously been allocated to the Ministry of Science and Technology.

In September 2003, **the Netherlands** announced further details of its restructuring plan that will see defence budget cuts of €380m each year from 2004 until 2008 and a reduction in manpower of 11,700. The cost saving measures and restructuring effort are intended to improve flexibility, operational effectiveness and the ability to take part in combined operations. The budget reduction means that equipment levels will also be affected. Four frigates which are being retired early will not be replaced by new land-attack corvettes, as had been originally intended. The frigates along with 10 P-3C *Orion* maritime patrol aircraft, 15 F-16 MLU fighters and six AH-64 *Apache* helicopters will become available for sale over the next two years. Likewise, the army's inventory of *Leopard* 2A6 main battle tanks will be cut from 180 to 110, with the retired units being sold. The medium-term goal is to equip the armed forces with a maximum of five warships (plus submarines or mine-countermeasure vessels), two fighter squadrons (down from three) and a modular brigade-sized mechanised or air manoeuvre task group.

The **German** economy remains mired in sluggish growth, high unemployment and a strong Euro reducing the competitiveness of exports. As noted above, Germany once again broke the rules of the suspended Stability and Growth Pact of the single currency, by incurring a budget deficit in excess of the 3% guideline. In order to address the budgetary problems Chancellor Gerhard Schröder unveiled a new programme – Agenda 2010 – a package of measures including changes to labour market regulations, healthcare and pension provisions and initiatives to cut taxes and subsidies, designed to reduce the swelling deficit. The defence budget for 2004, originally fixed at €24.4bn from 2002–06, in fact falls to just over €24bn. Personnel expenditure is unchanged representing 51.2% of the budget, procurement spending rises from €3.88bn in 2003 to €3.99bn in 2004, whereas R&D spending falls from €846m to €786m. A major reorganisation of the armed forces' personnel and equipment is under way to try and release funds for investment in forthcoming procurement programmes. Peacetime strength will be cut from 285,000 to 250,000 by 2010 and the number of civilian employees will fall from 128,000 to 75,000. In addition around 200 military bases out of the current 621 will be closed. In terms of equipment a new plan for the period 2005–17 unveiled by Defence Minister Peter Struck claims to make savings of some €26bn during the period. The main cuts will be achieved within the army including a reduction in the number of multi-role armoured vehicles to a single batch of 200 and the number of *Pumas* to a single batch of 410. A new air defence system (ModFlaSys) will be abandoned, a second batch of 125 NH90s are to be cancelled whereas the number of TRIGATs and *Tiger* helicopters will be reduced. Despite the strained budget situation, the air force will still receive its full complement of Eurofighter *Typhoon* aircraft, 60 A400M transporters and four Airbus A310 refuelling aircraft.

Following a four-year assessment phase, NATO awarded a €350m contract to the Transatlantic Industrial Proposed Solution (TIPS) consortium for the two-year design and development phase of the Alliance Ground Surveillance (AGS) System. The winning TIPS team comprising EADS, Northrop Grumman and Thales, among others, based their bid on a combination of Airbus A321 aircraft and *Global Hawk* UAVs. Although NATO has yet to decide the final number of AGS platforms the TIPS solution proposes a total of five A321s and seven *Global Hawks* together with 49 fixed and mobile ground stations.

After they were forced to cancel a similar contract in 2002, following budget reprioritisation after the devastating floods in Europe, the **Czech Republic** has again selected the *Gripen* fighter aircraft to provide the interim solution

to the air force's need to replace its Russian MiG-21. Under the new arrangement the aircraft will be leased from Sweden at a cost of CKr19.65bn (\$761m), 10% below the ceiling set by the Ministry of Defence. Runner-up in the contest was a proposal by Belgium to sell some of their upgraded F-16AM/BMs.

**Denmark** announced a sweeping military transformation process that will result in smaller forces better structured for international missions. Over the past decade the Danish military has cut force strength from 72,000 in 1992 to 21,180 in 2003. The new plan for the period 2005–09 calls for downsizing (two army brigades will be disbanded) and base closures as well as the disposal of equipment such as 180 *Leopard* main battle tanks. The new plan fixes the defence budget at DKr19.1bn (inflation adjusted) from 2005–09 of which an average of DKr2.9bn will be spent on procurement. The plan allocates NKr3.9bn for the construction of three project *Viking* submarines, although this is a contentious issue with some arguing that this is not a NATO requirement. The budget also includes an annual allocation of DKr900m for international operations, enabling the armed forces to double the number of personnel it can sustain on such a mission to 2,000. Denmark will remain committed to the Joint Strike Fighter project.

Recent announcements from the governments of **Turkey** and Greece indicate that both are keen to reduce their respective defence burdens and exploratory talks have been held by which both countries would reduce military spending closer to the NATO average of 2.7% of GDP. Turkey has indicated that it would be happy to see headline defence spending fall to 3% of GDP between 2004–12, the period of the current modernisation plan. In light of falling defence expenditure, the Turkish Ministry of National Defence announced that it had cancelled three delayed projects, together worth around \$10bn: 145 *King Cobra* helicopters, 1,000 main battle tanks and 40 UAVs. In place of the cancelled projects there will be a new Request for Proposals for 91 attack helicopters, the purchase of 250 second-hand tanks and programmes to develop a domestic MBT by 2010 and a domestic UAV. It is thought that better value for money from the already stretched military budget can be achieved via domestic procurement.

Despite agreeing to a longer-term reduction in military spending, **Greece** concluded three major deals during the past year. In addition to the purchase of an additional two *Super Vita* fast attack craft, bringing the fleet to a total of five, the Hellenic Army will spend €1.3bn on the purchase of 20 NH 90 transport helicopters and 12 AH-64D *Apache Longbow* attack helicopters.

Following the decision in 2003 to boost **Canadian** defence spending by C\$800m annually, the defence budget for 2004 was increased from C\$12.2bn in 2003 to C\$13.3bn. The picture is somewhat clouded, however, by NATO figures indicating that Canada's military expenditure in 2003 actually reached just over C\$14bn. The budget includes C\$300m, over two years, to cover the cost of Canada's participation in peacekeeping missions in Afghanistan and Haiti and the fight against terrorism. The budget also revealed that 'non-budgetary resources' would be made available so that the Department of National Defence can initiate its C\$1.3bn project to acquire up to 15 fixed wing search and rescue aircraft to replace its ageing *Buffalo* and *Hercules* aircraft. Funds amounting to C\$300m will be provided annually until the project is completed. The government also revealed the start of a C\$2.1bn project to acquire three new Joint Support Ships to replace the current auxiliary-oiler-replenishment vessels, deliveries of which will begin in 2011. Despite the extra funds announced in the budget, Vice Admiral Ron Buck, Chief of the Maritime Staff, made clear in his annual Impact Assessment report to the Chief of Defence Staff that the navy will not be in a position to undertake its allocated operational tasks. In particular he noted that the west coast high-readiness task group would only be able to provide 70 out of the required 120 sea days per ship, the introduction of the *Victoria*-class of submarines would have to be delayed, 10 maritime coastal defence vessels would remain unmanned and the maintenance backlog would reach 24% this year.

## Non-NATO Europe

In June 2004, the **Austrian** government endorsed the recommendations of an all party defence reform commission that called for the armed forces to be cut in half, following evidence from public opinion polls showing strong support for continuing Austrian neutrality and maintaining national service while rejecting major increases in defence spending. Before implementation the plan needs to be approved by parliament. There was fierce debate over the government's decision to purchase 18 Eurofighter *Typhoon* aircraft due to be delivered from 2007. In the meantime, Austria will lease 12 single-seat F-5E aircraft at an annual cost of €14m from Switzerland to provide air defence and enable Austria to retire its fleet of 23 *Drakens* by mid-2005.

**Finland** announced a 5.6% increase in its defence budget to €2.13bn for 2004 and indicated that the transformation process would be speeded up. Force numbers are being reduced with the aim of altering the military structure away from territorial defence towards highly mobile well-equipped forces that can be rapidly deployed to meet specific crises. A key decision not to procure any attack helicopters was revealed in March 2004 after a defence committee concluded that purchasing the aircraft would have accounted for around half of the procurement budget over the next 30 years. Instead, the money will be directed towards long-range weapons for the army and precision guided air-to-ground missiles for the fleet of 63 F-18 C/D aircraft currently only equipped for air combat. The decision not to proceed with an attack helicopter programme however, raises the question of how to effectively defend the 20 new NH 90 transport helicopters that will soon start to be delivered.

Continuing military reform in **Romania's** armed forces will see troop levels fall from 104,000 to 75,000 by 2007 and a civilian force of 15,000 down from 29,000 in 2002. In line with their commitment in the run up to joining NATO, the Romanian government has pledged to keep defence spending close to 2.4% of GDP through to 2007. The multi-annual planning process has been implemented in two phases: the first phase 2000–03 focused on directing resources towards the restructuring of operational forces, the second phase through to 2008 will concentrate on modernising combat equipment. In this regard, upgrading equipment will get priority over the procurement of new systems.

The continuing strength of industrial production, from both domestic and external sources, boosted GDP growth in the **Ukraine** to 9.3%. The improving economic environment enabled the government to balance its budget in 2003 and led to an increase in the official defence budget of 32% from h4.5bn in 2003 to h5.9bn in 2004. In June 2004, the Ukrainian parliament adopted a new law that will reduce armed forces personnel by 70,000 to 285,000 by the end of 2004. The move is part of a programme to move to a professional force over coming years. Under a separate budget, parliament also voted h243m in 2004 to the continued funding of the An-70 transport aircraft project. The Ukraine expects it will spend h1bn on the project between 2004 and 2006 to cover the completion of tests and the acquisition of an initial two aircraft for the MoD. Under agreements concluded in 1993 and 1997, the An-70 programme was intended to be a joint project between Russia and the Ukraine, however, Russia is currently in debt to the leading contractor and there was no provision of funds to either the debt or the project in the Russian State 2004 budget.

## Russia

Russia's impressive economic performance continued in 2003 and early 2004 on the back of high oil prices and sound macroeconomic policies that led Moody's, the international credit ratings agency, to revise Russia's external debt rating to investment grade. GDP growth increased by an estimated 7.3% in 2003 mainly as a result of higher oil prices boosting both investment and consumption. In addition to the positive impact of higher energy prices, a surge in machinery and equipment imports provided evidence of an acceleration in the restructuring and modernisation of several other sectors of the economy. Investment in fixed capital grew by 12.9% in 2003 compared to 3% in 2002.

For the fourth year running Russia expects to post a budget surplus amounting to 1.7% of GDP in 2003. Following a suggestion from the IMF, after its survey of the economy in May 2003, Russia resisted spending revenue windfalls resulting from high oil prices and instead established a stabilisation fund, with an initial deposit of US\$3.6bn, to protect against future resource price volatility and the demands on public resources that will arise from future planned structural reforms.

In 2004, GDP growth is set to slow to an estimated 5.5% reflecting an anticipated gradual decline in oil prices and possible uncertainty among investors about the relationship between the state and big business following the arrest of Yukos president Mikhail Khodorkovsky on charges of tax fraud – a case which many Russians believe is politically motivated. In the medium term the IMF note that further progress is needed with respect to the financial sector, natural monopolies, and the civil service and public administrations to achieve the goal of doubling real GDP in the next decade, and to help reduce excessive dependence on oil.

### THE 2004 DEFENCE BUDGET

Over the past decade Russian defence reforms have been almost exclusively centered on cuts to the five branches of the armed forces: the Strategic Nuclear Missile Force, Space Forces and Russian Federation air, land and naval forces. During this time the number of military personnel has fallen from 4.8m to 1.2m, with the likelihood of further reductions to around 800,000.

At a commanding officers conference in November 2003, defence minister Sergei Ivanov, indicated that the bulk of the 'complex structural changes' were now complete and that attention would turn to the everyday issues of 'combat training and improving combat readiness'. In terms of future equipment and readiness capability, guidelines are set out in the 2002–10 rearmament programme that heavily weights funds towards R&D activities until 2006, after which the focus will switch to the procurement of new weapons systems.

The 2004 national defence budget was boosted to R411bn in 2004 from R344bn in 2003, increasing military spending from 2.59% to 2.69% of GDP. As a proportion of the federal budget, defence expenditure rose from 14.69% to 15.47%. Increases were spread evenly across all areas of the budget and included extra money for pay and allowances, research and development and procurement. However, funds for pensions and military reform

that are funded outside of the defence budget fell. The 2004 State Defence Order (a combination of funds earmarked for procurement, R&D, repair and modernisation of equipment) is R148bn. In recent years, the State Defence Order has undergone rapid growth, amounting to R53bn in 2001, R80bn in 2002 and R118bn in 2003. Of more importance, however, is the fact that in each year the Order has been virtually fully funded, with the exception of 2003 when it would appear that a more significant underspend of around 10% occurred.

Despite the increasing budget, debate continues about the likelihood of fulfilling the 2002–12 state armaments programme. Viktor Zavarzin, chairman of the State Duma Defence Committee, has indicated that if the procurement budget is not increased to at least R250bn from the current level of R61bn, then the timetables set out in the national armament programme running to 2010 will not be achieved. Adding to the chance of the plan not materialising was an auditors report sent to the State Duma, revealing that the Ministry of Defence is losing billions of roubles a year because the increase in military hardware prices has been greater than that forecast or contracted. According to the report the results of military R&D and acquisition programmes are hindered by 'lack of a unified management system for the development, production, operation, upgrade and cannibalization of military hardware'. In an effort to address the criticism, the 2004 budget creates a new organisation, the State Committee for National Defence Procurement that will act on behalf of the MoD and award contracts on a competitive basis, and is aiming to realise cost savings of 15%.

Once again there was an increase in the details released with the budget. The procurement allocation in 2004 will cover the purchase of:

- six RS-12M2 *Topol-M* intercontinental ballistic missiles
- one Tu-160 strategic bomber

## 296 Russia Part II

- six military space craft and four launch rockets
- 14 T-90S main battle tanks
- five Su-27SM multi-purpose fighters
- the first production example of the Mi-28N night-capable combat helicopter
- a division of *Iskander* tactical ballistic missiles

In terms of R&D, the air force will receive the largest share to finance the following projects:

- 5<sup>th</sup> generation fighter
- Mi-28N helicopter
- Su-27IB strike aircraft
- An-70 and IL-76MF transport aircraft
- Modernisation of Tu-160, Tu-95MS, Tu-22M3 bombers
- Modernisation of Su-24, Su-25, MiG-29 and MiG-31 combat aircraft.

### Procurement spending, broken down by warfare category (Rbn)

Electronic warfare	29.2
Naval ships	16.8
Aircraft	111.0
Armoured vehicles	5.3
Ammunition	4.8
Artillery	1.8
Small arms	1.0

The Russian Navy outlined plans for the construction of a new class of multi-purpose surface combatants to carry out anti-submarine and patrol operations in offshore waters. Navy Commander-in-Chief Admiral Vladimir Kuroyedov, calling Project 20380 the most important surface-ship project in a generation, indicated that 20 of the new vessels will be built. In 2004 the navy will receive funds for the construction of two 20380 corvettes, the *Boreo*-class nuclear submarine and R&D money for the development of the new *Bulava* missile (a naval version of the *Topol-M*)

Indications in the draft Federal Budget for 2005 suggest that the National Defence Budget will increase by a further 28% to R528bn – an increase of around US\$4bn.

## Defence industry/exports

Russian arms manufacturers enjoyed another successful year in 2003. Exports of Russian-made military hardware amounted to US\$3.4bn while new orders signed during the year reached US\$4.3bn – slightly lower than the average of US\$5.4bn achieved over the previous four years. Major deliveries included the first two of three Project 1135.6 frigates to India, 12 Su-30MKIs to India and 19 Su-30MKs to China and, after several years of negotiations, the *Admiral Gorshkov* deal was finally completed (see p. 309–310). China and India remain the core market for Russian military equipment accounting for around 70% of last years exports, however, Rosoboronexport, the Russian defence export corporation, reported that deliveries were made to a total of 52 countries.

In December 2003, the defence ministers of Russia and China signed a working protocol on continuing bilateral military-technical cooperation believed to be worth around US\$2bn in 2004. In future years, however, the relationship between the two countries is set to change. It is known that China wants to acquire more licenses and undertake joint developments of military hardware rather than continue with the historic policy of simply purchasing completed weapons systems. At present the export of military technologies from Russia to China accounts for just 30% of weapons trade between the two countries and it is believed that Beijing would like to increase this share to 70%.

In recent years Russia has made robust efforts to develop new markets, particularly in South-east Asia and the Middle East, in an effort to reduce reliance on her traditional military partners and there were some notable successes in 2003. In April, Indonesia signed a contract for two Su-30MKs, two Su-27SKs and two Mi-35 assault helicopters which was followed by the purchase of 18 Su-30MKM by Malaysia.

Table 23 **Russian Regional Defence Expenditure as % of GDP 1993–2003**

Later in the year Vietnam announced a variety of orders it had placed with Russian manufacturers including a number of Project 12418 missile boats, four Su-30MKs and a number of S-300PMU1 air defence systems. In addition, comments made by Sergey Chemezov, Rosoboronexport's first deputy general, indicated that marketing attempts in the Middle East were also resulting in orders. The UAE now operates a large fleet of BMP-3 infantry fighting vehicles that Russia is currently upgrading and is thought to be conducting talks for the supply of Su-30MK and Su-35 fighter aircraft as well as new S-400 air defence systems.

Whilst Rosoboronexport had another good year, those companies operating outside of the reorganised state export agency were not so successful. In fact sales by non-Rosoboronexport companies fell in 2003 and their share of total military sales fell from 12% in 2002 to 6%. Of the four other arms exporters only the Tula-based Instrument Design Bureau reached its 2003 sales target of \$110m. Exports by Russian Aircraft Corporation (RSK) MiG reached just \$131m – far lower than the \$357m target.

### **Estimating Russian military expenditure**

As ever, estimating the real scale of Russian military spending is fraught with difficulty. When taken at face value the official National Defence budget heading for 2003 corresponds to 2.59% of GDP, however this figure excludes military pensions, funding for military reform, paramilitary forces and several other items that are clearly defence related costs but fall outside of the Ministry of Defence.

Taking into account military related spending outside of the National Defence budget gives a significant boost to the total military spend. Table 22 lists some of the additional budget areas that must be taken into account when calculating the true level of military spending in Russia. Once included, these extra funds bring overall military related expenditure to around R612bn or 4.60% of 2003 GDP. Additionally, there is revenue from arms exports, US\$3.4bn in 2003, much of which finds its way into military coffers, further inflating the total.

Translated into dollars at the market exchange rate, Russia's official National Defence budget for 2003 amounts to US\$11.2bn – roughly equivalent to Turkey or Israel's annual defence expenditure. Including the additional defence related items listed above boosts the figure to US\$20bn, which by simple observation is clearly significantly lower than that suggested by the size of the armed forces or the structure of the military-industrial complex and not a useful statistic for comparative analysis.

For this reason, *The Military Balance* makes an estimate of actual defence expenditure in Russia based on purchasing power parity (PPP) rates. Using this methodology we estimate that total military related expenditure in 2003 (including funds from arms exports) was the equivalent of US\$65.2bn.

## Middle East & North Africa

Countries in the Middle East and North Africa region enjoyed a significant pick up in economic growth in 2003, helped by higher oil production and higher oil prices as well as the swift end to the war in Iraq. GDP growth strengthened to 5.4%, up from 4.2% in 2002. Continuing high oil prices in the first half of 2004, together with strong demand from emerging major oil consumers, including India and China, should underpin growth throughout 2004.

In Volume 32 of their Survey, the IMF acknowledged that while the region has made clear progress on macroeconomic and structural reforms, further action is required including a 'fundamental reassessment of the role of the state in the economy and the creation of a rules-based regulatory environment'. It identified that the biggest challenges facing the region are how to improve employment growth, better integrate their economies with the global economy and the need for measures to avoid booms and busts in oil prices. In particular, the region is facing a burgeoning youth population for whom jobs are not being created fast enough. The number of young people entering the labour market will rise by an average of 3% per annum over the next ten years. Although the fertility rate is declining, population growth, particularly in the Persian Gulf, is nearly twice that of East Asia and four times that of developed nations.

Medium-term prospects, particularly in the crucial area of job creation, will depend upon each country maintaining macroeconomic stability while successfully implementing structural reforms. The reform of those public and private institutions that help to accelerate trade liberalisation, improve education, improve transparency and modernise financial markets is required for dealing with future demographic challenges.

Despite the improving economies of the region, as yet there has been little evidence that windfall revenues accruing from high oil prices have been diverted towards military spending. Figures for 2003 indicate that regional defence expenditure as a proportion of GDP is 6%, having been as high as 8.1% in 1998.

Among the major oil producing countries, **Iran** has been the strongest performing economy over the past three years and in 2003, GDP growth of 5.9% was again at the higher end of performance for the region. In comparison with Gulf countries, the Iranian economy is much more diversified – its manufacturing and agricultural sectors comprise one-third of GDP and services account for about a half of GDP. However, commentators note that non-oil industries require significant modernisation in order to become more competitive and capable of competing in global markets. The 2004 budget was highly expansionary, presented as a programme to primarily boost employment, taking advantage of high oil prices. Although no details were released detailing the defence budget, observers believe that it was increased by 10% from 2003, reaching some IR47tr in 2004. However, official defence budgets although useful for giving an indication of spending trends, largely understate the true level of defence-related expenditure in Iran. It is probable that the official budget excludes significant funding for other military and military-related activities, including: The Revolutionary Guard, procurement, research and development (including missile and nuclear programmes), defence industry funding, paramilitary forces and funding for armed opposition groups and terrorists outside Iran. Taking these additional military-related expenditures into account is likely to double real Iranian defence expenditure to around 8% of GDP.

As the world's largest oil exporter **Saudi Arabia** naturally benefited from high oil prices, boosting GDP by 6.4% in 2003. The outturn of the 2003 budget was also positively affected by a massive increase in revenue as a result of high oil prices. In their original budget proposal for 2003, the Ministry of Finance forecast revenues of SR170bn and expenditures of SR209bn, however, by the end of the year actual revenues amounted to SR295bn and expenditures to SR250bn, producing a surplus of SR45bn. For 2004, the budget has been calculated based on an average price of US\$20 a barrel for Saudi oil and production of eight million barrels a day. Under this scenario revenues are forecast at SR200bn and expenditures are set at SR230bn, a budget deficit of SR30bn. However, both the oil price and Saudi production have been

## 300 Middle East and North Africa Part II

significantly higher than budgeted levels for the first six months of 2004 and another surplus is guaranteed. The 2004 budget is notable for the distribution of funds towards social programmes. Whilst the defence and security budget increases just 3%, spending on Human Resource Development increases by 28%, Health and Social Development by 45% and Infrastructure Development by 38%. Saudi Arabia has made no new major defence acquisitions recently, however, speculation continues over the Kingdom's interest in procuring a fleet of Eurofighter *Typhoon* aircraft, particularly at a time when oil prices remain high. It is thought that Saudi Arabia may follow its significant *Tornado* investment, part of the £20bn Al Yamamah arms deal, with the purchase of 50 *Typhoons*.

Following two years of recession as a result of the domestic security situation, the **Israeli** economy returned to positive growth in 2004. GDP grew by a modest 1.3% helped by a pick up in external demand and a quick end to the war in Iraq. The two-year recession has had a negative impact on Israel's fiscal position, as government expenditures continued to grow while revenues plummeted. In late May 2003, to address the deteriorating budget position, the Knesset approved Israel's economic recovery law. The law contains a comprehensive plan that proposes reforms in the public sector, while encouraging the private sector. The main issues include: expenditure cuts; an acceleration of personal tax rate reduction; structural reform, reorganisation, and efficiency measures; a bailout programme for pension funds; an increase in government infrastructure investments; and tighter control over foreign workers. As part of the plan, the 2004 defence budget was originally cut by NIS1bn to NIS32.4bn. However, as the year progressed additional funds were directed towards the Israeli Defence Force (IDF) and the final budget climbed to NIS35bn (NIS43.3bn including US Foreign Military Aid). Despite the extra funding, the IDF realised that it still wouldn't have sufficient funds to implement all of its desired programmes and therefore had to formulate a revised five-year acquisition plan. The new plan is based on a perceived reduction of the threat of a conventional war targeted against Israel, concentrating instead on a continuous conflict with the Palestinians and the growing threat of surface-to-surface missiles and non-conventional weapon development in Iran. The main beneficiary of the new plan will be the army which will develop a new type of heavy Armoured Personnel Carrier, having rejected procuring the US *Stryker* vehicle, and purchase more than 100 Dingo 2 4x4s. The army is designing an ambitious C4I capability to fully integrate all ground platforms with broadband communications. The air force has decided to take up their option for the purchase of an additional six *Apache* AH-64D helicopters as well as additional investment in UAVs and the upgrade of its fleet of CH-53 heavy transport helicopters, C-130 transport aircraft and Boeing 707 inflight-refuelling and airborne early-warning aircraft. The navy didn't fare as well and has had to put plans for the acquisition of two multi-mission corvettes and a 13,000-tonne landing platform dock-type vessel on hold.

After expanding at a rate of 4.1% in 2002, real GDP growth in **Algeria** picked up to 6.7% in 2003. While growth in 2002 was limited by weak agricultural production as a result of adverse weather conditions, it was boosted by an exceptional harvest and a strong hydrocarbon sector performance in 2003. Against this background, the high unemployment rate (estimated at 25.9% of the labour force in 2002 [the latest available data]) is projected to drop. In line with the growth in the economy, Algeria again increased the defence budget to D201bn to remain at around 5.5% of GDP. Although there was no official confirmation, it appears that following long running negotiations and a personal visit by MiG's general director, Valerii Toryanin, Algeria is likely to buy 49 upgraded MiG-29 fighter aircraft for a price of around US\$1.5bn.

As part of its 2004 Foreign Military Sales (FMS) the US DoD awarded three major contracts for the supply of military equipment to the **Egyptian** navy and air force. Each year Egypt receives US\$1.3bn in Foreign Military Aid (FMA) and in 2004, some US\$550m is earmarked for the purchase of three fast missile craft, US\$110m for the upgrade of CH-47 helicopters, US\$100m for the purchase of three C-130H transporters and US\$38m for the procurement of approximately 400 *Sidewinder* air-to-air missiles.

The **United Arab Emirates** economy rebounded in 2003, recording growth of 7.0%, up from 1.7% in 2002. In their Article IV economic survey of the UAE released in June 2004, the IMF commended the

Emirates' prudent macroeconomic policies and judicious use of the oil price windfall but urged for greater transparency in economic affairs. The lack of transparency within the state budget makes it difficult to assess the level of real defence spending. For the past nine years the official defence budget has been unchanged at D6.0bn (US\$2.8bn) despite the fact that during that time the UAE has made several significant purchases, not least the procurement of 80 F-16 aircraft in 2000 for US\$6.4bn, suggesting that additional procurement funds from external state investments are made available to the military boosting the true level of defence expenditure. Local company Abu Dhabi Shipbuilding (ADSB), received two major orders in 2004 as the UAE builds its coastal protection capability. Under the first contract ADSB will supply 30 9.5m high-speed rigid assault boats and under the second, worth over US\$500m, four 70m French designed light corvettes known as Project Baynunah. The air force also placed another major order with the signing of a contract for 33 new *Mirage* 2000-9 combat aircraft, in a deal that was initiated in 1998, to go with the 30 2000-5s currently being upgraded by Dassault Aviation.

## Central and South Asia

The return of favourable weather conditions across South Asia in 2003 led to a marked recovery in agricultural output from the very depressed levels of a year earlier. As a result and driven largely by India which accounts for roughly 80% of the region's economic activity, GDP growth in the region accelerated above forecast to 7.0% in 2003 from 4.6% in 2002. The forecasts for 2004 and 2005 are positive with all countries expected to boost their performance assuming that peaceful relations between India and Pakistan are sustained and there is no deterioration in the security situations in Afghanistan, Nepal and Sri Lanka. Economic growth in **India** increased from 4.7% in 2002 to 7.4% in 2003. The economy benefited from both a variety of cyclical factors, such as a good monsoon and lower interest rates, and the delayed impact of liberalisation policies adopted during the 1990s – policies that included investment in roads and telecommunications infrastructure, corporate restructuring, and the opening up of the external sector. However, as the economy continues to grow, further pressure will be placed on the already large fiscal deficit, which reached 10% of GDP in 2003. Plans to address the imbalance were set out in the Fiscal Responsibility and Budget Management Act, with the ambitious aim of balancing the current budget by 2008. Central to the plan is the intention to improve revenue rather than reduce expenditure via a range of policies aimed at broadening the tax base and improving the administration and collection of taxes.

In line with the growth in its economy, India once again increased its defence budget. In February 2004, the ruling Bharatiya Janata Party (BJP), proposed an interim budget of Rs785bn up from Rs770bn (US\$16.6bn) in 2003. Following the surprise victory of the Congress Party in the May 2004 general election, the 2004–05 budget was further boosted – by 13.4% to Rs873bn (US\$19.1bn). As in previous years the cumbersome and inefficient equipment procurement process within the Ministry of Defence (MoD) resulted in unspent funds of around Rs50bn (US\$1.07bn), earmarked for the 2003–04 budget period being repaid to the Ministry of Finance, resulting in a defence budget out-turn of just Rs721bn (US\$15.5bn) in 2003. Comparing the revised Congress budget for 2004–05 against the actual outcome of the previous year's budget shows a real budget increase of 21%. In order to address the recurrent problem of underspending by the MoD, the BJP had proposed a Rs250bn three-year 'non-lapsable' modernisation fund, allowing equipment purchases to be spread out over a number of years without the threat of having to return unspent funds in any one fiscal year. Following their election victory, the Congress Party scrapped the plan promising instead a more vague 'determination to eliminate all delays in the modernisation of the defence forces'. The fact remains that without a significant improvement in the government's ability to speed up its decision-making process, unspent funds will continue to be lost to the MoD.

The revised budget allocated Rs365.7bn (US\$8bn) to the army, including Rs87.5bn (US\$1.91bn) for capital outlays – twice the final sum spent in 2003–04. In the short term the army is keen to acquire *Smerch* multiple rocket systems, 155mm howitzers and upgrade its infantry units for counter-insurgency operations. In the medium term, however, Indian army officials have asked for an extra \$5bn during the next five years to buy and upgrade tanks, artillery, air defence equipment, smart munitions and electronic warfare equipment in order to maintain an advantage over neighbouring Pakistan. In justifying its request the army noted that the 'combat ratio', a military capability measure used by India to determine their advantage over Pakistan, has fallen to 1.22:1 compared to a ratio of 1.75:1 in the mid-1970s. The army also blamed the burdensome procurement system for the ongoing chronic lack of weapons and equipment reaching troops deployed in Kashmir. Officials have complained for over two years that the 250,000 troops stationed in the region, at a cost of around \$5m a day, were lacking basic equipment and submitted an emergency request for \$200m to rectify the problem.

After several years of negotiations, in January 2004, the Indian Navy was finally able to sign a deal with Russia for the acquisition of the 44,500-tonne *Admiral Gorshkov* aircraft carrier. Under the \$1.5bn deal, India will pay for the ship to be refitted at a cost of around \$625m and is scheduled to take delivery in five years

## 310 Central and South Asia Part II

time, although many believe that this will prove to be an optimistic timetable. Included in the deal is an initial batch of 12 MiG-29K single-seat fighters, four MiG-29KUB two-seaters and a number of Kamov Ka-28 anti-submarine warfare and Ka-31 airborne early warning helicopters. There is also an option to acquire a further 30 MiG-29s to equip the Indian Navy's three indigenous air-defence ships planned for 2015. Apart from two demonstrators built in 1988, the MiG-29K remains a prototype and upon delivery of its squadron, India would become the first operator of its type. For several years it was thought that, as part of the *Admiral Gorshkov* deal, India would also lease purchase two *Akula*-class nuclear submarines and four strategic Tu-22 bomber/maritime strike aircraft from Russia. It would appear that these developments have been delayed. In recent years, India and Russia have indicated that they intend to develop beyond a

'buyer-seller' relationship and move into weapons research and development elevating their military-technical cooperation to a higher level in key projects.

The air force is set to receive Rs215.9bn (US\$4.72bn) in 2004–05 including a 142% increase in procurement funds that will help finance two major procurement deals signed in the last year. The most significant of these was the final signing of the long running *Hawk* Advanced Jet Trainer (AJT) programme with the UK. Under the deal, the Indian Air Force (IAF) will receive 66 AJT's at a cost of Rs80bn (\$1.7bn). The first 24 will be delivered by BAE in 'fly-away' condition while the remaining 42 aircraft will be manufactured under licence in India by Hindustan Aeronautics Ltd. All 66 planes should be delivered within ten years. Between 1991 and 2003 the IAF lost 273 fighter aircraft in crashes and a recent Public Accounts Committee report declared that 42% of these incidents were as a result of inadequate pilot training due to the lack of an intermediate advanced jet trainer facility. In a separate development, as part of its intention to increase its existing fleet of Dassault *Mirage* 2000-5 fighter aircraft, the IAF approved the acquisition of a further 12 aircraft from Qatar. Negotiations with Dassault continue for the possible supply of up to another 126 of the type.

The second significant procurement in 2003–04 highlighted the continuing importance of Russia and the growing importance of Israel as suppliers of military weapons systems to India. Following a visit by Israeli Prime Minister Ariel Sharon to India in September 2003, the two countries signed an agreement for the sale of three *Phalcon* airborne early warning systems to the Indian Air Force for an estimated \$1.1bn. Russia will supply three A-50 Illushin IL-76 transport aircraft complete with electronic intelligence and communications systems which will each be fitted with a *Phalcon* AWACS system, developed by Israel Aircraft Industries subsidiary, Elta. The project is the largest defence export deal in Israeli history (See p.146). In another deal with Israel, India will buy additional *Searcher 2* and *Heron* Unmanned Aerial Vehicles (UAVs) that will be fitted with a variety of payloads.

The relative stability of the internal and external security situation together with continuing implementation of the government's ambitious reform plan boosted economic growth in **Pakistan** to 5.5% in 2003. The improving economic environment will enable Pakistan to let its International Monetary Fund loan programme expire in 2004 without needing to be renewed and provide the platform for an increase in government spending that will see the budget deficit widen from 3.3% of GDP to 4% in 2004. As part of the 12.1% increase in government spending, the defence budget will rise from a revised Rs180bn in 2003 to Rs194bn. The original defence budget for 2003 was set at Rs160bn, however, costs associated with anti-terrorist activities added an additional Rs20bn.

Following a meeting between US President George W. Bush and Pakistani President Pervez Musharraf at Camp David in June 2003, the US administration agreed to provide US\$3bn in economic and military aid, contingent on Pakistan's continued cooperation in the war on terror and movement towards democracy. The US\$3bn package will be spread over five years and half will be military related although the purchase of F-16 fighter aircraft has been ruled out.

With the failure to secure new US fighters, more details became available about the joint venture between Chengdu Aircraft Industry in China and the Pakistan Aeronautical Complex (PAC) to produce the Joint-Fighter-17 (JF-17). At present only two prototypes are flying and a third is planned. Initial production of 16 aircraft will begin in 2006 – eight aircraft will be delivered to China's PLA and eight to the Pakistan Air Force, four of which will be built in China and four assembled by PAC. It is thought that the Pakistan Air Force has a requirement for up to 150 JF-17s. To fill the gap until the delivery of new fighter aircraft, the Pakistan Air Force finalised a deal with Libya for the purchase of 40 *Mirage* interceptor/ground attack aircraft. The aircraft will be used as spares for the air force's existing fleet of *Mirages* to extend their service life.

During a visit to Pakistan in April 2004, Turkish Defence Minister M. Vecdi Gonul, expressed the desire to further military cooperation and defence collaboration between the two countries, indicating a joint venture for the production of an UAV.

### 312 Central and South Asia Part II

Despite a defence budget of just US\$657m, **Bangladesh** is seeking to transform its armed forces capability with the purchase of up to 16 new fighter aircraft and 12 jet trainers. The modernisation plan also includes the acquisition of an additional Mi-17 transport helicopters, maritime patrol aircraft, submarines and frigates. Although several Western and Eastern manufacturers have been approached for the fighter aircraft requirement, including MiG, Sukhoi and Korea Aerospace Industries, it is likely that budget constraints will lead to the purchase of a domestic aircraft. Leading contenders are the Chengdu FC-1 fighter and Hongdu K-8 *Karakorum* trainer. Although, the parliamentary defence committee has suggested that current funding is inadequate to achieve these goals, the government has announced that US\$330m will be spent on naval procurement of which US\$220m has been allocated for the purchase of the first of four submarines to enter service in 2012. Naval plans also include the purchase of a large patrol vessel to be built by Pakistan, four missile corvettes and six patrol craft in addition to the five ex-Royal Navy Island-class coastal patrol craft purchased from the UK.

## East Asia and Australasia

Considering the uncertain global economic picture, the economies of East Asia and Australasia performed surprisingly well in 2003, and prospects for 2004 suggest an even stronger economic performance is likely. Despite the Iraq conflict, high oil prices, the outbreak of SARS, and a slow recovery in the major industrial countries, growth in South-east Asia hit 4.6% in 2003 and growth in East Asia reached 6.5%, making them the most economically dynamic regions in the world. Lending significant support were accommodating macro-economic policies, competitive exchange rates, the recovery in the IT sector and the continuing strength of the Chinese economy. Indeed, by boosting trade throughout the region, over the past two years China has consolidated its position as the major engine for intraregional growth. In 2003, the PRC became the single largest export market for East Asia while among South-east Asian countries its share in total exports has become sizable. Although Chinese growth may moderate over the next two years, intraregional trade will remain the main driver for growth in South-east and East Asia. In addition to a booming trade environment, increasing domestic demand in many countries, helped by low interest rates, is a significant development broadening the base of the recovery. Commenting on the emerging trend, the Asian Development Bank suggested that the expansion of the middle class and the relatively young age structure of populations are 'fundamentally changing consumption behaviour throughout the region'.

The **Australian** economy rebounded strongly from mid-2003 helped by private expenditure and an upturn in exports. The resulting improvement in tax receipts enabled Finance Minister Peter Costello to present a budget for 2004–05 that keeps the government's budget in surplus and provides for a 3.4% increase in defence spending to A\$16.34bn. The budget released in May 2004 deviated little from the revised Defence Capability Plan (DCP) outlined in February 2004. The revised DCP covers the period 2004–10 and earmarks A\$50bn for the acquisition of new capabilities and technologies during that period. Whilst this amount is A\$10bn more than the original plan released in 2000, the revised version also indicates that equipment costs have escalated dramatically in the past four years. For example, the cost of Australia's planned acquisition of Joint Strike Aircraft (JSF) has risen from A\$10bn in 2000 to A\$15.5bn, new destroyers from A\$4bn to A\$6bn and the costs of replacing the Royal Australian Air Force's (RAAF) *Orion* reconnaissance aircraft has increased from A\$2bn to A\$4.5bn. As a result, the revised plan appears to leave room for delays of several years in the delivery dates of certain projects, allowing the Department of Defence (DoD) to spread the cost over time and take pressure off the current budget. Other significant developments outlined in the DCP include a total of A\$1bn for the acquisition of a high-altitude long-endurance UAV fleet. The HALE budget represents an increase of A\$850m over the previous plan and continues to be based around the RQ-4 *Global Hawk* platform, although the in-service date has been pushed back by four years to 2009. There is also A\$1bn for the additional troop-lift helicopter requirement. During the year Australia completed two major acquisition contracts. In April 2004, the DoD announced that it had selected EADS to provide the next generation air-to-air refuelling capability for the RAAF. Under the project EADS will supply five Airbus A330-200 multi-role tanker transport aircraft and several years of associated logistical support in a package worth around A\$2bn. In May 2004, it was announced that the RAAF would expand its future fleet of Boeing 737 'Wedgetail' AEW aircraft to six by exercising an A\$326m option for a further two aircraft.

As previously noted, **China** enjoyed another year of solid economic activity with real GDP growth accelerating from 8.1% in 2002 to 9.1% in 2003. Growth was higher than expected as a result of strong domestic demand, buoyant foreign trade and surging foreign and public sector investment. However, concerns are growing about investment in several sectors (notably steel, aluminum and cement) where output is booming, indicating that the economy may be growing too fast. In addition to the massive growth in investment, other signs of overheating include rising prices for raw materials and shortages in the energy sector. Towards the end of 2003, the People's Bank of China responded to these developments

and initiated a series of measures to slow the economy. As a result, growth is set to weaken in 2004, but will probably still outpace the government's target. China increased its official defence budget by 11.9% in 2003, from Y185bn to Y207bn, the fifteenth year of double digit growth. In presenting the budget, Finance Minister Jin Renqing said that the increase was intended to improve the 'combat readiness of the armed forces under high-tech conditions' and to raise the salary of army personnel and the pensions of ex-servicemen. The increase is in line with the ongoing restructuring effort to trim the 2.5m-strong People's Liberation Army by 200,000 by the year 2005, the goal being 'fewer but better' troops.

As *The Military Balance* has previously noted, the publicly reported defence budget only represents part of actual military expenditure: proceeds from defence sales are not included, and procurement, research and development (R&D) and most pensions for retired personnel are funded from elsewhere within the state budget.

Following a difficult period in recent years, after the bursting of the IT bubble and the global economic slowdown, **Taiwan's** economy rebounded in the second half of 2003 thanks to a pick up in external demand for IT products, the mainstay of the Taiwanese economy. Sentiment was further boosted when Taiwan was declared free of SARS in July 2003. Although the defence budget for 2004 was increased from NT\$230bn to NT\$252bn, defence spending as a proportion of GDP has fallen from 3.6% in 1998 to around 2.4% in 2003.

Several months after the release of the budget the cabinet announced an additional supplemental arms spending package of NT\$610.8bn. Interestingly, the decision to provide a supplementary budget, was taken just days after the release of the US DoD report 'PRC Military Power 2004' which warned that 'Beijing's military modernisation programme is eroding the challenges that historically inhibited the use of force against Taiwan'. The 15-year budget will provide NT\$412bn for eight diesel electric submarines, NT\$145bn for six *Patriot* anti-missile systems with 388 missiles and NT\$53bn for 12 P-3C anti-submarine marine warfare aircraft. In order to fund the package the government will raise NT\$420bn by issuing bonds, NT\$100bn will come from selling MoD land and NT\$94 will come from shares in state-owned enterprises.

In September 2003, Taiwan announced the launch of a comprehensive C4ISR programme, dubbed 'Po Sheng'. The programme is based on the Link-16 data communications system and will improve communications and data transfer between land, sea and air platforms and command and operations centres. Lockheed Martin was awarded a modest initial contract for US\$27.5m for installation and life cycle support to integrate current datalink functionality. It is possible, however, that total project costs could reach US\$2bn. In April 2004, the US DoD notified Taiwan that it intends to sell them two Ultra High Frequency long-range early-warning radars for a projected cost of US\$1.8bn. At present, however, the National Defence Committee has only provided US\$830m for the purchase of one radar.

Despite enjoying its highest growth rate in three years, **Japan's** recovery continues at a slow pace whilst the country's longevity in population grows, together with the cost of sustaining a huge public debt is putting increasing pressure on government finances. Although GDP growth in 2003 beat expectations as both investment and domestic consumption rose, the strength and sustainability of the recovery remains to be seen. In September 2003, the Japanese Defense Agency submitted a draft budget for 2004 that proposed a 0.7% increase over 2003, however following discussions with the Finance Ministry, the 2004 budget was actually reduced by 1% to Y4,902bn. In reaching their conclusions the Finance Ministry argued that costs could be saved by cutting personnel expenditure through downsizing and the disposal of redundant equipment. Most significant is the provision of extra funds to upgrade Japan's missile defence system after the Security Council gave the go ahead for the project which has been under consideration for five years after North Korea test-fired a ballistic missile over Japan. The Japanese Defense Agency has estimated that it will cost around Y700bn (US\$) over five years to acquire the Raytheon MIM-104 *Patriot* PAC-3 low-to-high-altitude land-based air defence system and the Standard SM-3/Block 1 short and medium-range ship-

based theatre defence missile. In FY04, ¥102bn (US\$) is earmarked for the project. The PAC-3 will supplement PAC-2 systems first ordered in 1985, while the SM-3/Block 1 will replace SM-2MR missiles currently fitted on the Japanese Maritime Self-Defense Force's four *Kongou*-class destroyers.

The budget also included further details about its new 13,500-tonne helicopter carrier ship. The vessel would be the largest in the Japanese fleet and will be operated purely as a helicopter platform, there are apparently no plans to incorporate a 'Ski-jump' facility. It is believed that the acquisition of two ships would provide a replacement for the two 30-year-old *Haruna*-class destroyers. Other new procurement projects to receive funding were the Kawasaki C-X transport and P-X maritime patrol aircraft.

Bucking the trend of higher growth in the region, GDP growth in **South Korea** fell to 3.1% in 2003 from 6.3% in 2002. Although the situation should improve during 2004, excessively high household debt, industrial relations problems and a squeeze on credit will make progress slow. In response to the changing security environment in the region South Korea increased its defence budget by 8.6% in 2004 to ₩18.9bn (US\$16.4bn). The move followed increasing pressure from the United States that South Korea should strengthen its own armed forces and gradually rely less on US forces for its security, particularly at a time when the US is reducing its own troops on the peninsula. Of the current force of 37,000, the US plans to withdraw around 12,000 troops from South Korea and will relocate the remainder away from front line positions close to the border with North Korea. At the same time, the US military will invest an additional US\$11bn to enhance their own capabilities and are anxious that Seoul should increase defence spending in parallel. Speaking after the announcement of the provisional defence budget, South Korean President Roh Moo-hyun, explained that it was unacceptable for the world's twelfth largest economy not to be able to 'assume the role of main actor' in its own defence matters.

Whilst the 8.7% increase in the defence budget was far greater than the increase in the general government budget, which rose by just 2.1%, it was still considerably less than the original draft budget submitted by the Ministry of National Defence (MoND) in June 2003. In their draft budget the MoND called for a massive 28% increase in 2004 defence spending in order to boost military spending to 3.2% of GDP from the current level of 2.7%.

Following President Roh's comments regarding South Korea's need for greater defence self-sufficiency, the government has launched a major overhaul of the entire defence acquisition process. The reform will address the organisational structure and budgeting process of national military acquisitions and will be carried out by the Prime Minister's Office and the Commission against Corruption, rather than the MoND, in an attempt to gain the public's trust following recent arms scandals involving the powerful MoND Acquisition Policy Bureau.

In response to the United States' desire that South Korea be more able to manage its own defence, the budget includes funds for an airborne early-warning and control programme, reducing the country's reliance on USAF E-3 AWACS aircraft. Known as the E-X programme, it had originally been announced in 2000 but was then suspended in 2002 due to a lack of funds. Four platforms are planned at a cost of up to US\$2bn with deliveries between 2009 and 2001. Another significant acquisition programme was launched by a request for proposals in March 2004 for the multi-billion dollar Korea Multi-role Helicopter programme (KMH). The programme, estimated to be worth a total of over US\$10bn, will be the country's biggest ever acquisition eventually providing the army with 300 utility helicopters and 170 attack variants. The plan is not without its critics, including the People's Solidarity for Participatory Democracy, one of the main groups that sought to block South Korea's purchase of 40 Boeing F-15s in 2001, who argue that the programme will place a heavy burden on taxpayers and hinder Korean unification. Others argue that the army's cancelled AH-X attack helicopter programme would be a more effective way of modernising army aviation.

Sustained investment in defence over recent years has led **Vietnam** to make several significant equipment purchases in the last year. The biggest deal is a US\$250m contract to buy two batteries of S-300PMU air-defence systems from the Russian company Almaz/Antei. Vietnam also intends to buy four

Su-30MKK twin-seat multi-role fighters from Russia, although up to 30% of the cost of the first four aircraft will be paid for in Vietnamese goods. The deal includes an option for eight more aircraft and is part of an agreement signed in 1999 between the two countries that proposed a total purchase of 24 fighters for a total cost of US\$1bn. A second aerospace deal covers the purchase of at least eight Polish PZL M28 *Skytruck* short take-off and landing aircraft configured for maritime surveillance and border control missions. In another deal with Russia, bringing the total to around US\$500m in 2003, Vietnam will take delivery of 10 Project 1241.8 *Molniya* missile boats worth US\$120m.

**Singapore** was another country in the region to benefit from strengthening external demand - exports surged by 36% in 2003 - the end of the SARS virus and supportive macroeconomic policies. The defence budget increased to S\$8.62bn in 2004 from S\$8.25bn in 2003. Although there were no new significant procurement deals agreed in the last year there were developments in a number of ongoing projects. The first of six new multi-mission frigates, built by DCN in Lorient, was launched in January 2004 ahead of sea trials at the end of 2004 and delivery to the Republic of Singapore Navy in May 2005. The remaining five vessels will be built by Singapore Technologies Marine under a technology-transfer agreement. A decision is yet to be made on the helicopter to equip the ships and provide anti-submarine and anti-surface warfare capabilities - contenders include Eurocopter's *Cougar*, the NH-90 and Sikorsky's SH-70. The competition to replace the air force's two squadrons of A-4SU *Super Skyhawks* with up to 20 new fighter aircraft took a step further in October 2003 when the shortlist was reduced to three: the Boeing F-15, *Dassault Rafale* and the *Eurofighter Typhoon*. Acknowledging that in addition to replacing the *Super Skyhawks* the air force will, by around 2015, also need to replace its ageing F-5s, Singapore became the second Asian country, after Australia, to join the US-led F-35 Joint Strike Fighter programme. Singapore will invest US\$50m in the project as a Security Co-operation Participant, a lower level of involvement than that of Partner status, under which they will not be able to gain initial work on the project.

GDP growth in **Malaysia** exceeded forecasts in 2003, supported by a solid expansion in manufacturing, low unemployment and strong demand for exports. Malaysia has declared an intention to achieve a balanced budget by 2006 and as part of that commitment the defence budget was reduced from RM9.1bn in 2003 to RM8.5bn in 2004. With the increasing problem of piracy and maritime security in the region, the Malaysian prime minister outlined the armed forces' initiatives to deal with the situation. So far the MoD

**Table 31 East Asia Regional Defence Expenditure as % of GDP 1993–2003**

## 322 East Asia and Australasia Part II

has built a string of radar tracking stations along the Straits of Malacca and will be building additional radar stations along the Sarawak and Sabah coastlines. The navy has received the second of six MEKO A100 offshore patrol vessels, procured largely to counter the piracy threat, and the air force is equipped with new *Eagle* maritime unmanned aerial vehicles. In addition the air force is also considering bids from five teams competing to supply an airborne early warning and control capability.

## Caribbean and Latin America

Economic growth in Latin America rebounded in 2003 following the deep recession of 2001–02. Conditions improved throughout the region but were particularly evident in the Mercosur countries where real GDP growth, which had fallen by 1.2% in 2002, rose by 1.9% in 2003 and is forecast to increase by up to 4% in 2004. Whilst the recovery was initially led by export trade, driven by the exchange rate depreciation, recent falls in interest rates and a return of confidence have further boosted domestic demand and broadened the base of the recovery. Although prospects for 2004–05 look encouraging, as is usual in Latin America, the outlook remains vulnerable to a weakening in the global economy and to domestic social unrest which triggers financial indiscipline leading to a loss of recently won investor confidence. In this regard, public opinion surveys continue to highlight that despite the improvement in economic conditions, income inequalities, poverty and particularly unemployment have contributed to an increase in social tensions in a number of Latin American countries. In attempting to address these problems, policymakers have little room for manoeuvre. High levels of public debt and vigilant financial markets negate short-term spending boosts as a realistic option, and leave governments with little option but to continue with structural reform programmes which focus on strengthening the tax base and improving public expenditure control. Against such a fragile background, there is unlikely to be any significant change in defence expenditures in the near future.

The strongest turnaround in the region occurred in **Argentina** where the economy grew by 8.7% in 2003, after contracting -10.9% in 2002. While growth is forecast to slow to around 5.5% in 2004, future economic success will depend on progress in key policy areas including the restructuring of sovereign debt and strengthening of the banking system. Given current budget constraints following the financial crisis in 2001, the Argentine government is believed to be considering the purchase of second-hand military equipment in order to fill gaps in its defence capability. Reports suggest that Argentina is keen to acquire dock-landing ships and has been offered a batch of Dassault *Mirage* 2000 multi-role fighters. The shortage of funds has led Argentina and Chile to consider merging their requirement for offshore patrol vessels and build the vessels locally. Argentina is seeking five ships under the PAM programme and Chile would like to buy up to four 70 metre vessels.

**Table 33 Latin America Regional Defence Expenditure as % of GDP 1993–2003**

Strong macroeconomic policies and continued progress with structural reforms saw the **Brazilian** economy move back into positive ground in the final quarter of 2003, although for the year as a whole GDP contracted by -0.2%. Under the strict budgetary guidelines imposed by the IMF, the defence budget was unchanged in 2004 at R27.8bn (US\$9.2bn). Having cancelled the F-X fighter aircraft programme in 2002, the Brazilian Air Force re-opened the bidding process for the US\$700m contract in October 2003. The Russian defence industry is proposing both the MiG-29 and Su-35 aircraft in the competition and it is likely that the Su-35 bid received a boost following a visit to Brazil in October 2003 by Russian Defence Minister Sergei Ivanov during which Russia promised assistance in building a new satellite launcher and possible help in reviving the stalled Brazilian nuclear submarine programme. Meanwhile the first upgraded F-5 aircraft, completed under a joint project between Embraer and Elbit Systems, an Israeli defence manufacturer, was unveiled in December 2003. The retrofit and modernisation programme covers 46 aircraft, each one receiving a new avionics suite, navigation and self-protection systems, new ejection seats and multi-mode radars which should extend their life by another 15 years.

As a result of the high price of copper (driven primarily by strong demand from China) together with falling interest rates, **Chile** continued to enjoy solid economic growth, recording GDP growth of 3.3% in 2003. The defence budget increased from P831bn to P947bn in 2004. However total defence spending in 2003 was closer to P1,890bn (US\$2.5bn) when extra budgetary items are considered, including approximately \$249m from the proceeds of Chile's 2003 copper exports (around 10%) which is directed by law to the military. Offers for construction of Chile's long delayed Fregata 2000 frigate programme were received in August 2003, however in early 2004 the Ministry of Defence announced that instead of buying three new vessels the navy would take delivery of four second-hand ships from the Netherlands. The estimated cost of the cancelled project was believed to be around \$850m, whereas the procurement of two *Jacob van Heemskerck* L-class air defence frigates and two *Karel Doorman* M-class multi-purpose frigates will be just \$350m. With the arrival of the L-class vessels in 2005, Chile will become the first South American navy to possess area and long-range air-defence capabilities. Progress with Chile's other major procurement project, the purchase of 12 F-16 fighter aircraft, continues to be slow. A major sticking point remains the ongoing problems in achieving the air force's demand for a 100% offsets package. In addition, a growing scandal related to the purchase of former Belgium *Mirage* aircraft in the 1990s, may lead to the contract with Lockheed Martin being re-examined. Although this is unlikely, it has focused attention on the need for Chile to spend scarce resources on such expensive combat aircraft, at a time when the armed forces are in desperate need of transport planes and helicopters. Chilean troops and equipment deployed to Haiti were transported in aircraft designed in the 1950s.

In the Andean region, although economic conditions are likely to improve, the outlook in Peru, Bolivia, Ecuador and Venezuela is overshadowed by political uncertainties. In **Venezuela**, high oil prices will help the economy to return to growth in 2004, however a recovery in consumer and business confidence as well as a resolution of the political crisis, will be required to forge longer-term stability.

The improved security situation and subsequent increase in confidence in **Colombia** contributed to continuing strong economic performance. Following last year's donation of six *Mirage* F1 multi-role fighter aircraft to the Colombian Air Force, Spain is to provide 46 surplus AMX-30 EM2 tanks and 20 M114A2 artillery pieces to the army for a nominal sum of US\$6m. Growing military cooperation between the two countries appears likely to lead to increasing Spanish investment in Colombia's domestic defence industry. Although the Colombian government indicated that the tanks would be used to fight the country's internal conflict, the type of vehicle purchased could be interpreted as a belated attempt to reduce the nation's strategic military capabilities gap with Venezuela. An analysis of Colombia's defence capacity by the domestic Security and Democracy Foundation, released in April 2004, highlighted the widening military capabilities shortfall between Colombia and her neighbours. Once again the US increased funding to help Colombian Forces deal with the war on drugs as well as terrorism. US government assistance in 2004 will

### 334 Caribbean and Latin America Part II

be US\$574.6m, including US\$110m for military training and equipment purchases and US\$463m under the International Narcotics Control and Law Enforcement programme to deal with the drug threat. In addition, the US Department of Defense will donate a further US\$110m to fund its own programmes – including, training and resources for the Colombian Navy's River Brigade, improvement in bases and intelligence sharing. Although President Alvaro is seen as a US ally he will not be able to seek re-election in 2006 and so the US military is keen to educate Colombia's armed forces in how to operate independently.

Following 10 years of poor relations with Russia, and with half of its 70 Soviet-built helicopters in storage due to a shortage of spares, **Peru** signed a new defence cooperation agreement with Russia that will provide new aircraft as well as significant upgrade packages. Financed in part by a US\$200m credit facility, Russia will supply five Mi-35 armoured helicopters and five Antonov AN-32B transport aircraft and will undertake the upgrading of Peru's fleet of Mi-8, Mi-17 and Mi-26 helicopters. It is not clear, however, if the deal also includes the mid-life upgrade and overhaul of the air force's 18 Su-25 and 20 MiG-29 fighter aircraft. France too signed a new Technical-Military Cooperation Agreement that is expected to lead to the upgrading of all 12 of Peru's Dassault Mirage 2000 multi-role fighters. In May 2004, the navy finally acquired two former Italian Lupo-class guided-missile frigates at a cost of US\$30m following a year of controversy that saw the resignation of the defence minister amid speculation that the deal had been shelved due to lack of funds. Peru has arranged an option covering the acquisition of another two Lupo-class frigates under a plan to achieve an eight-strong frigate fleet by 2010.

The economic growth that reached 1.3% in 2003 in **Mexico** is expected to accelerate to 3.3% in both 2004 and 2005. In the short term, supportive factors include the increase in exports to the US, falling interest rates and inflation and rising consumption and business investment. However, medium-term prospects are dependent on the as yet limited progress in reforming the tax system and labour markets. The defence budget of NP31.8bn (US\$2.8bn) was barely changed for the third successive year. An improved ability to monitor the coastline will result from two Mexican deals signed with Israel in 2003. To increase maritime and airspace surveillance Mexico has bought three refurbished E-2C *Hawkeye* AEW aircraft, withdrawn from Israeli Air Force service in 1994, as well as two harpoon-equipped *Aliya*-class fast-attack craft that will be used to patrol the Gulf of Mexico.

## Sub-Saharan Africa

Despite large regional variations, overall economic growth in Sub-Saharan Africa rose from 3.5% in 2002 to 4.1% in 2003. In 2005, a combination of higher commodity prices, expansion in oil production and favourable weather conditions in some countries is forecast to boost growth to more than 5% – a level not seen since the early 1970s. In recent years, several countries have managed to strengthen their macroeconomic policy framework helping to lower inflation, reduce fiscal deficits, improve governance and a reduce external debt via the Heavily Indebted Poor Countries Initiative (HIPC). As of February 2004, 22 countries in Sub-Saharan Africa were committed to the HIPC process, with another eight awaiting consideration, under which they will receive debt relief totalling US\$42bn. However, if significant inroads into poverty are to be made across the region then the performance of the faster-growing countries will need to be replicated by those less successful economies. It is therefore encouraging that the New Partnership for Africa's Development (NEPAD) has instituted its political governance and economic Peer Review Mechanism, whilst the African Union has adopted a Convention on Preventing and Combating Corruption. Despite these positive initiatives though, it will be difficult to achieve long lasting improvements without a comprehensive plan to mitigate the impact of the HIV/AIDS pandemic and although economic progress has been made in some countries, many are still dependant on higher aid flows, debt relief and the reduction of restrictions imposed by industrial countries on African exports. Many African nations had hoped to make progress on the latter issue at the World Trade talks held in Cancun in September 2003. The talks, however, collapsed without any agreement on the major issues including subsidies, which are available in developed countries and responsible for putting African countries at a trading disadvantage.

**South Africa** experienced a drop in economic activity in 2003 as a result of the stronger Rand decreasing exports. However, falling interest rates and inflation together with a mildly expansionary fiscal policy is forecast to boost growth to 2.6% in 2004. In the medium term, South Africa faces a considerable challenge in reducing unemployment, which rose to over 30% in 2003, and implementing an effective HIV/AIDS strategy. The South African defence budget for 2004 rises to R20.2bn from a revised outturn of R19.9bn in 2003 – defence expenditure has now risen by 35% in real terms since the implementation of the Strategic Defence Package in 1999. However, while there are sufficient funds available to support the payment schedule for the major acquisitions programme, there is growing pressure on operational and training budgets. Although the Special Defence Account, from which the Strategic Defence Package is funded, fell to R7.9bn from R8.0bn this was a consequence of the stronger Rand reducing the value of foreign currency payments. Spending on the package will peak next year at R7.02bn, falling to R5.9bn, R3.93bn and R3.2bn over the following three years. As the costs of the package dwindle, procurement funding will shift to the future infantry fighting vehicle programme, the later phases of the ground-based air defence system and an armoured personnel carrier and tactical logistics programme. As part of the budget, R1.1bn will be set aside for costs relating to the SANDF's operations in Burundi and the Democratic Republic of Congo, however this amount is unlikely to be sufficient and any additional spending reduces the funds available for other operational requirements. The SANDF's target for operational expenditure is around 30% of the overall budget, at present the level is only 22%, whilst current personnel costs are some 38% of the budget, well above the 30% target. As a result, the Department of Defence intends to cut the size of the armed forces in order to achieve these targets. After a nine-month delay due to a cabling problem, the MEKO A200 corvette programme is back on course. Following the delivery of the first ship to the South African Navy in December 2003, the second ship arrived in February 2004, the third was handed over to the SAN in March and the final ship is due in September. The four *Lynx* helicopters intended to equip the vessels were finally ordered in 2003 having been selected in 1998, but then delayed due to funding problems.

Following the improvement in the industry's security situation, increased oil production and higher oil prices helped **Nigeria** record a strong economic expansion in 2003 which saw GDP jump by 10.6%.

Growth in 2004, however is expected to slow sharply as the boom in the oil sector wanes and expansionary fiscal and monetary policies lead to an increase in inflation. In their July 2004 Article IV review of the Nigerian economy, the IMF congratulated Nigeria on measures taken to initiate economic reform, notably the National Economic Empowerment and Development Strategy (NEEDS), aimed at addressing macroeconomic and structural problems and reducing poverty. Following a pledge in 2003 to improve the pay and welfare of members of the armed forces, the 2004 defence budget was increased by 22.5% to N76bn. Allocations to the police were also increased to N73.7bn reflecting ongoing concern about ethnic and religious violence.

Growth in **Uganda** reached 4.9% in 2003, helping maintain the country's position as the fastest growing economy in East Africa over the past decade. In its original budget proposal for 2004–05 Uganda had indicated that defence spending would increase by 21% from Ush302bn in 2003 to Ush367bn. However, when several international donors expressed concern at the increase and threatened to review their budget support, the Ministry of Finance and Planning adjusted the budget to provide a smaller 14.9% increase, making the final 2004 defence budget Ush347bn. During 2003, the original budget of Ush276bn was supplemented with an additional Ush26bn to meet the costs of maintaining security in the north of the country.

The economic crisis in **Zimbabwe** deepened in 2003, with real GDP contracting by a further 13.2%. Multiple factors are responsible for the country's ongoing economic difficulties, including economic mismanagement, international sanctions, adverse weather conditions and the HIV/AIDS pandemic. Agricultural output remained significantly below average reflecting not only drought conditions but the negative impact of the fast-track land reform programme. Despite the economic chaos, however, it appears that Zimbabwe placed an order for the purchase of 12 FC-1 fighter aircraft and 100 military vehicles from China. According to the Defence Ministry the order, which bypassed the state procurement board, was necessary because of the poor state of Zimbabwe's existing fleet of European military planes and vehicles for which Zimbabwe can no longer obtain spare parts due to the arms embargo imposed by both the EU and the US.

National reconciliation following the peace agreement signed between the government and UNITA in April 2002 helped **Angola** achieve growth of 4.5% in 2003. However, most of this growth came as a result of increased oil production and the non-oil sector continued to lag. As a result poverty remains widespread along with dependence on imports and food aid. Economic consequences of years of war are a fiscal deficit

### 344 Sub-Saharan Africa Part II

of 8% in 2003, or 36% if oil revenue is excluded, and an inflation rate of around 100%. In January 2004, Human Rights Watch issued a report alleging that nearly US\$4.3bn of Angola's estimated US\$17.8bn in oil revenues was unaccounted for between 1997 and 2002. Whilst it was never possible to provide accurate figures for military spending during the war, it is clear that additional funds, over and above the official defence budget, were required to support the fight against UNITA. In 2004, the defence budget is boosted from k27bn (US\$365m) to k80bn (US\$958).

Table 47 Selected Non-State Armed Groups

**Definition** In this table, a ‘non-state armed group’ is an organised and armed opposition force with a recognised political goal, acting independently from state or government. Groups are only included if they have an effective command structure. The definition covers groups that might be variously described as guerrillas, militia forces, paramilitary or self-defence groups and also terrorist groups with political objectives that have caused significant damage and casualties over several years.

The table only includes non-state armed groups that are active or have recently been active and which represent, or have represented, a significant threat to states and governments. Armed groups with solely criminal objectives are excluded.

#### Notes

▲ Group known to carry out suicide attacks

<sup>1</sup> **A** active, **C** cease-fire, **D** dormant (inactive for the past 12 months),

**X** defeated

Uga	<b>West Nile Bank Front (WNBf)</b>	1995	1,000–	A/D	Uga	Anti-government group dominated by west. Nile tribes and former army officers under Idi Amin

## International Terrorism

### OVERVIEW

Overall, risks of terrorism to Westerners and Western assets in Arab countries appeared to increase after the Iraq war began in March 2003. With the military invasion and occupation of Iraq, the United States demonstrated its desire to change the political status quo in the Arab world to advance American strategic and political interests. Al-Qaeda seeks, among other things, to purge the Arab and larger Muslim world of US influence. Accordingly, the Iraq intervention was always likely in the short term to enhance jihadist recruitment and intensify al-Qaeda's motivation to encourage and assist terrorist operations. The May 2003 attacks in Saudi Arabia and Morocco, the gathering of foreign jihadists in Iraq, the November 2003 attacks in Saudi Arabia and Turkey and the March 2004 bombings in Madrid confirmed this expectation.

The Afghanistan intervention that began in October 2001 offensively hobbled, but defensively benefited, al-Qaeda. While al-Qaeda lost a recruiting magnet and a training, command and operations base, it was compelled to disperse and become even more decentralised, 'virtual' and invisible. Conservative intelligence estimates indicate that al-Qaeda is present in more than 60 countries, and that at least 20,000 jihadists were trained in its Afghanistan camps since 1996. Although half of al-Qaeda's 30 senior leaders and perhaps 2,000 rank-and-file members have been killed or captured, a rump leadership is still intact and over 18,000 potential terrorists at large. Naturally, only a small number of that total are likely to be hardcore terrorists; a substantially larger number would be peripheral support players, providing technical, logistical or financial assistance; and the remainder might merely be operationally inactive individuals who support al-Qaeda's political and religious agenda but who remain susceptible to becoming active terrorists on precisely that account. This breakdown is roughly analogous to the configuration of more traditional terrorist organisations or insurgencies. To fairly characterise al-Qaeda's pool at any given moment, one would have to add to this number an unspecified increment of those recruited directly or indirectly through the enlistment of local groups – which in turn recruit on their own – since the Afghan training camps were eliminated in late 2001. It is probable that recruitment generally has accelerated on account of Iraq.

Al-Qaeda's cells still appear to operate semi-autonomously, maintaining links through field commanders to leaders who are probably Pakistan's 'tribal areas' near the Afghan border. Now with few military point-targets, the US and its counter-terrorism partners must depend for immediate self-protection mainly on homeland security and law-enforcement and intelligence cooperation. This has proven qualifiedly effective where mature governments, robust security institutions and longstanding bilateral security relationships prevail. Since 11 September, one major attack – in Madrid on 11 March 2004 – has taken place in Europe while none have occurred in North America. But where security institutions are weak (as in Kenya) or constrained by anti-Western domestic sentiment (as in Indonesia, Pakistan and Saudi Arabia), vulnerabilities arise that are easier for al-Qaeda to exploit. Such countries have become relatively soft targets of opportunity – though some, like Saudi Arabia, have very high political value to al-Qaeda.

The US remains al-Qaeda's prime target. A dominant al-Qaeda theme is Islam's alleged historical humiliation at the hands of the Judeo-Christian West, and al-Qaeda spokesman Suleiman Abu Ghaith has cited four million American dead as a prerequisite to any Islamic victory. Unlike those of ethno-nationalist or ideological terrorist groups, al-Qaeda's complaints have been transformed into religious absolutes and cannot be satisfied through political compromise. Further, the forcible occupation of Iraq, a historically important land of Islam as

former seat of the Caliphate, led by Christian nations has more than offset any calming effect of the US military withdrawal from Saudi Arabia completed last August. Thus, al-Qaeda has added Iraq to its list of grievances. With Osama bin Laden's public encouragement, up to a thousand foreign jihadists may have infiltrated Iraq and established operational relationships with Sunni Baathists loyal to Saddam Hussein who initiated the ongoing insurgency, and perhaps to some Shi'ite militias. Furthermore, the substantially exposed US military deployment in Iraq presents al-Qaeda with perhaps its most attractive 'iconic' target outside US territory. The capture of Saddam Hussein in December 2003 did not immediately dampen the Iraqi insurgency.

On a tape broadcast on 21 May 2003, al-Qaeda second-in-command Ayman al-Zawahiri indicated a new focus on the Arab world, branding Saudi Arabia, Kuwait, Qatar, Bahrain, Egypt, Yemen and Jordan as collaborators in the war against Iraq. By twice striking hard in Turkey in November 2003 and then in Spain less than four months later, however, al-Qaeda widened its post-11 September operational purview beyond the Arab world. On account of its offensive limitations, al-Qaeda must now relinquish substantial operational initiative and responsibility to local talent, which post-attack investigations have revealed usually include jihadists trained in Afghanistan. Still, experienced al-Qaeda middle managers can provide planning and logistical advice, materiel and financing to smaller groups, as they did in Saudi Arabia, Morocco and Indonesia, and probably Turkey and Kenya. Al-Qaeda is the common ideological and logistical hub for disparate local affiliates, and bin Laden's charisma, presumed survival and elusiveness enhance the organisation's iconic drawing power. Galvanised by Iraq if compromised by Afghanistan, al-Qaeda remains a viable and effective 'network of networks'.

Through regime change in Iraq, the US and the UK intended in part to usher democracy into the Gulf region to advance a salutary long-term political convergence between Islam and the West. But insurgency and other state-building problems have raised doubts about the project's ultimate political benefits, while costs in terms of increased terrorism have materialised. Imparting positive spin, some US officials have observed that the jihadist influx brings more terrorists into a smaller killing zone. But as a flat, multi-nodal network reliant on local talent, al-Qaeda is unlikely to appreciably concentrate forces: the 1,000 estimated to be in Iraq is a minute fraction of its potential strength. The November 2003 attacks in Riyadh and Istanbul and ongoing planning activity in the US and Europe occurred as jihadist infiltration into Iraq intensified. Lack of progress in securing and stabilising Afghanistan also permitted a resurgence of al-Qaeda and Taliban operations there. This varied activity attested to al-Qaeda's resilient capacity to conduct operations in multiple 'fields of jihad'. After the Istanbul attacks, in the London-based Muslim newspaper *al-Quds al-Arabi*, bin Laden cited Italy, Japan and Australia (along with the US) as potential targets.

While the organisation and its affiliates and friends do not enjoy the financial fluidity that they did before the post-11 September counter-terrorism mobilisation, neither do they appear shorn of resources. Moreover, terrorist operations are asymmetrically inexpensive. The Bali bombings cost under \$35,000, the USS *Cole* operation about \$50,000 and the 11 September attacks less than \$500,000. Moving large amounts of cash therefore is not an operational necessity. Furthermore, since the Afghanistan intervention forced al-Qaeda to decentralise and eliminated the financial burden of maintaining a large physical base, al-Qaeda has needed less money to operate. Its increasing use of the informal *hawala* system of financial transfer has prompted new laws in the US, Hong Kong and elsewhere requiring remittance houses to register. Compliance has been low, however. There are some indications that al-Qaeda has converted its assets to gems (including 'conflict diamonds'), gold and other commodities that are susceptible to bartering and hard to trace. Finally, the local affiliates on which it has come to rely more and more since the Afghanistan intervention sometimes have their own local funding sources.

Since 11 September, to be sure, mainstream Western banking has become subject to substantial vigilance. Big strides in financial surveillance, however, will now be difficult to make. Al-Qaeda's post-Afghanistan decentralisation allows it to leverage atomised local sources that are harder to monitor. *Hawala* remittance systems – based on trust rather than a paper trail – are very difficult to regulate and trace. Though some Arab governments have shown grudging cooperation, Muslim banks and their regulators tend to be averse to the application of heavy scrutiny. Private citizens, particularly Saudis, continue to contribute heavily to charities and schools (*madrassas*) that serve as fronts and training grounds for terrorist organisations. Perhaps the most important measure that Western governments can yet take is to add such charities to official lists of terrorist organisations and, correspondingly, freeze their assets.

The Madrid bombings in March 2004 suggested that al-Qaeda's network had fully reconstituted, set its sights firmly on the US and its closest Western allies in Europe and established a new and effective *modus operandi*. While al-Qaeda remained a generally even flatter and less hierarchical organisation than it had been prior to the Afghanistan intervention, US agencies developed intelligence suggesting that certain functions – in particular, bomb making – may be more centralised and therefore potentially more efficient and sophisticated than earlier believed. Al-Qaeda will keep trying to develop more promising plans for terrorist operations in North America and Europe. These potentially involve weapons of mass destruction or disruption, which al-Qaeda is known to want to develop but is not believed to yet possess in operational form. Meanwhile, soft targets encompassing Americans, Europeans and Israelis, and aiding the insurgency in Iraq, will do. Given the group's maximalist objectives and transnational ubiquity and covertness, stiff operational counter-terrorist measures, inter-governmentally coordinated, are still acutely required. Progress will come incrementally. It is likely to accelerate only with currently elusive political developments that would broadly depress recruitment and motivation, such as the stable democratisation of Iraq or resolution of the Israeli-Palestinian conflict. A survey of the activity of al-Qaeda and its affiliates in separate geographical areas indicates that the magnitude and complexity of the counter-terrorism challenge remain substantial.

---

## **REGION-BY-REGION**

---

*Western Europe.* Radical Islam appears to be on the rise in Western Europe. Furthermore, the sources of European Muslims' grievances – customarily 'diaspora' concerns involving political conditions in their countries of origin, such as Algeria – are increasingly social, economic and political marginalisation in host countries. This 'universalisation' of Muslim complaints dovetails with al-Qaeda's anti-Western and pan-Islamic agenda. It follows that jihadist recruitment seems to be increasing in Western Europe. In addition, Europe's southern exposure to the Maghreb has become an acute point of vulnerability, given the heavy involvement of North African operatives – Moroccans and Tunisians as well as Algerians – in terrorist attacks, notably those that occurred in Madrid in March 2004. There remain residual threats from more old-style ethno-nationalist terrorist groups such as the Basque separatists of *Euskadi ta Askatasuna* and various Irish groups. But the high political costs of their increasing violence since 11 September appear to have disinclined them to do so. The principal threat to Europe is now transnational Islamic terrorism, which potentially entails mass-casualty attacks that the old groups eschewed.

Whereas Europe was most valuable to al-Qaeda and its followers as a platform for attacking America before 11 September, improved US homeland security and the involvement of some European countries in the Iraq intervention alongside the US have since made it more attractive as a direct target. Western European governments have re-oriented their counter-terrorism

policies in response to this development to varying degrees. Those, like the UK and France, that have long experience with domestic terrorism have tended to take the most robust approaches – responding more swiftly and decisively to emergent intelligence on terrorist threats and stepping up first-response and civil-defence capabilities. Coordination at the supranational level through the European Union (EU), while a trumpeted aspiration since 11 September, has been harder to forge in practice. At the European Council summit on 25 March, two weeks after the Madrid bombings, the heads of government agreed to redouble efforts to share information both bilaterally and through Europol, to tighten border controls, and to strengthen cooperation with third countries, and supported the appointment of a European counter-terrorism coordinator (former Dutch minister and Liberal Euro-parliamentarian Gijs de Vries) to bring greater coherence to policies adopted with the EU Common Foreign and Security Policy. But de Vries himself has stated that his authority would be circumscribed, and that the lion's share of the operational counter-terrorism burden would still rest with national governments.

*Eastern Europe/Near East.* Although al-Qaeda's attempt to establish a jihadist front in the Balkans failed, al-Qaeda-links may have infiltrated the region through immigration and resettlement and largely Saudi-sponsored schools and mosques and thereby established support networks. Al-Qaeda trained jihadists from Chechnya and through them has insinuated itself into the Chechens' separatist struggle against Russia. It appears, however, that jihadists do not enjoy command-level influence among Chechen rebels. The conflict remains in essence an 'old' ethno-nationalist one, though it does have an Islamist dimension that could enlarge. The November 2003 attacks in Turkey are potentially more significant. The first attacks, on synagogues, reflected the group's customary enmity towards Jews. Bombing the British consulate and a UK-based bank in Turkey suggested an intention to punish the United States' close strategic partners, especially those who would assist US-led efforts in Iraq. Targeting Turkey has additional, if secondary, significance. Turkey is the West's ranking model of secular Islamic government, the only largely Muslim country in NATO, and the only one with smooth diplomatic and defence relationships with Israel. In the Islamist leanings of Turkey's Justice and Development Party – in power since November 2002 – al-Qaeda might sense better political traction for radical Islam there, and could have been sending the message that impious government and partnerships with Western countries and Israel will not be tolerated. Although Turkish security forces have crippled the infrastructure of indigenous Islamist terrorist groups, police interrogations of suspects in custody indicated that the bombings had been carried out by an ad-hoc cell composed of ten Turkish nationals with links to al-Qaeda, which they claimed had financed the operation. By June 2004, the Islamist Turkish Hizbullah appeared to be gaining strength. Furthermore, Kurdish separatists – quiet for the past several years, but perhaps reinvigorated by the possibility of greater Iraqi Kurd autonomy and consequently better prospects for larger Kurdish state – added to Turkey's counter-terrorism burdens by stepping up harassing activity in mid-2004.

*Central Asia.* Several hundred Taliban and al-Qaeda holdouts – including Taliban leader Mullah Omar and al-Qaeda leaders bin Laden and al-Zawahiri – remain at large in the 'tribal areas' of north-western Pakistan near the Afghan border. Both groups appear to be able to win fresh recruits among Deobandi *madrassa* graduates, and to benefit from some assistance from anti-American Islamist warlord Gulbuddin Hikmatyar's militia, and at least passive tactical support from elements within Pakistan's Inter-Service Intelligence (ISI) agency. While the ISI is more friendly to the indigenous Taliban than to al-Qaeda foreigners, the latter are likely to be better trained. Thus, counter-terrorism continues to be the top US and Pakistani military priority in the region. The Taliban was weakened through *Operation Mountain Viper* in August 2003, and in *Operation Avalanche* in December 2003. Terrorist violence erupted unexpectedly in Uzbekistan at

the end of March 2004, when at least 40 people were killed in suicide bombings and gun attacks in Tashkent. The fact that the bombers struck local rather than Western targets indicates that resentment is primarily directed at President Islam Karimov's regime, which has cracked down on Islamism and all other forms of political dissent over the past decade. Who was responsible remains unclear. The Islamic Movement of Uzbekistan (IMU) is linked to al-Qaeda and has a regional Islamist agenda financed by the drug trade, but was thought to have been fatally damaged during *Operation Enduring Freedom* in late 2001. But the IMU, or a connected group, could have reconstituted and switched tactics, recognising the high international profile that suicide bombers can yield, or it may have been superseded by a previously unknown group.

*South Asia.* The unresolved status of the Hindu-Muslim conflict between India and Pakistan over Kashmir enables al-Qaeda to use the conflict as a lever for recruiting jihadists in the region and globally. That said, the conflict on the ground has been relatively quiet over the past year. In January 2004, the Indian and Pakistani governments agreed to resume official dialogue. Cross-border infiltration of Pakistan-based militants into Kashmir has diminished, and Pakistani President Pervez Musharraf has cracked down on terrorism. But movement in negotiations depended heavily on individual leaders – Musharraf and Indian Prime Minister Atal Behari Vajpayee – and the surprise victory of India's Congress Party over Vajpayee's Bharatiya Janata Party made the peace process more fragile. Kashmir therefore remains a focal point for terrorism in the region and a pretext for jihadist recruitment. In Pakistan, however, terrorist operations by both Sunni and Shi'ite militants – primarily with an intra-Muslim sectarian agenda, but sometimes against Western targets – have continued.

*South-east Asia and Australia.* Southeast Asia, the demographic centre of Islam, appears to be the most fertile ground on the continent for transnational Islamist terrorist activity and recruitment. Indonesia is home to Jemaah Islamiah (JI) – arguably the most potent of al-Qaeda's local affiliates. JI was responsible for the Bali bombings in October 2002 and the Marriott Hotel bombing in Jakarta in August 2003, and contemplates a regional Islamic caliphate encompassing Indonesia, Malaysia, Singapore and part of the Philippines. Al-Qaeda is also especially well networked in South-east Asia. JI has tendrils throughout the region, and until his capture in Thailand in August 2003, Indonesian Riduan Isamuddin, better known as Hambali, served as JI's liaison with top al-Qaeda management. Thailand was a planning venue for the Bali bombing. Long before 11 September, the al-Qaeda leadership nurtured the Philippines as a recruitment and planning outpost by infiltrating Muslim separatist groups, including Abu Sayyaf and the Moro Islamic Liberation front (MILF). The cell that planned the thwarted 1995 'Bokjinka' plot to blow up 11 airliners was based in the Philippines. While Abu Sayyaf has been compromised by venality and factional fighting, it is still of potential tactical utility to al-Qaeda and operationally active. The MILF has re-asserted its jihadist credentials – refusing to renounce its links with JI – as prospects for the political resolution of its grievances against Manila have faded.

Counter-terrorism capabilities and cooperation with Western governments are at high levels in Singapore and Malaysia. They have become better in Indonesia as a result of post-Bali pressure from the US, Australia and the UK, but the considerable influence of Islamists in national politics and the degree to which separatist insurgencies divert the security forces casts doubt on the durability of tough enforcement and ready cooperation. The Philippine government is a willing counter-terrorism partner, and receives substantial tactical assistance from the US military, but its capacity is limited by inefficiency and corruption. Thai authorities have been less than vigilant with respect to terrorism, but finally began to awaken when violence surged in Thailand's Muslim-dominated southern provinces. Although regional counter-terrorism capabilities are rhetorically supported, the Association of Southeast Asian Nation's adherence to the non-

interference principle limits any potential for swift improvement. Australia is a prime terrorist target – and has been explicitly designated as such by al-Qaeda leaders – because of its close strategic alignment with US and its involvement in Iraq. Accordingly, Canberra has become an important regional counter-terrorism actor. While Australia's primary homeland-security strategy is denial of access, and Australian law-enforcement is able to effectively monitor a relatively small indigenous Muslim population (about 350,000), the Bali bombing highlighted the need to protect Australians abroad and the importance of forward interdiction. This consideration spurred the Australian government's creation and funding of the Jakarta Centre for Law Enforcement Cooperation, which is tasked 'to provide operational support and professional guidance in response to specific terrorist threats or actual attacks'. In September 2002, Canberra also established a new army tactical assault group for quick deployment in surgical counter-terrorism operations.

*Gulf/Middle East.* US-led intervention in Iraq refocused jihadist attention on Iraq itself and on the 'apostate' regime in Saudi Arabia. In Iraq, jihadists – probably under the tutelage of Abu Musab al-Zarqawi, a Jordanian with close connections to al-Qaeda's leadership – appear to have acquired some influence in the largely indigenous anti-coalition insurgency, and to be participating in some attacks and perpetrating kidnappings. But while they intend to foment unrest to frustrate American state-building objectives – if necessary by stirring up a Sunni-Shi'ite civil war – they do not appear to have command authority over the insurgency. In Saudi Arabia, al-Qaeda attacks in Riyadh in May and November 2003 – which claimed 46 lives, most of them Saudi – also alienated larger portions of Saudi society, raised Riyadh's awareness of the indigenous terrorist threat and sharpened Saudi authorities' enforcement and cooperation efforts. Saudi Arabia's counter-terrorism robustness may now compare with that of Egypt, Jordan, Yemen and the small Gulf states, all of which ramped up enforcement and cooperation with Western governments after 11 September in most areas. But attacks in April and May 2004 on foreign oil-industry personnel in Saudi Arabia, killing 33, reflected an indigenous al-Qaeda or affiliated group that was highly capable and committed, and more generally suggested that al-Qaeda leadership would work to intensify the jihadist focus tactically on Westerners in Riyadh and more strategically on the oil industry that constitutes the kingdom's lifeblood and a key element of the global economy. The fact that terrorists also directly attacked Saudi security forces in April 2004 reinforces this assessment. To cope with an increasingly dangerous threat, it appeared that Saudi security forces would have to raise their enforcement standard yet another notch.

The Lebanese Shi'ite Muslim group Hizbullah has been quieter than expected in the wake of the Western intervention in Iraq, though it has infiltrated operatives into Iraq in addition to providing training and technical assistance to Hamas and other Palestinian groups in the West Bank and occasionally attacked Israeli troops in the disputed Shebaa Farms area and near Israel's border with Lebanon. While Iran and Syria still support Hizbullah and Hamas, Hizbullah appears to be keeping its own counsel to a greater extent. Logically, however, it would share Iran's incentive towards forbearance to preserve the interests of the Iraqi Shi'ite majority that US efforts stand to benefit. Hamas, for its part, has been weakened by vigorous Israeli counter-terrorism measures, including targeted killings of leader Sheik Ahmed Yassin and his successor, Abd al-Aziz Rantisi, in March and April 2004, respectively. Hizbullah and the Palestinian groups appear institutionally resistant to forging links with al-Qaeda, but in the continuing political vacuum in the Israeli-Palestinian conflict there may be greater risks of their doing so. Iran and Syria appear to have discarded any notion of lending passive tactical support for al-Qaeda (in particular, providing temporary haven for some operatives) in view of diminished options stemming from various strategic developments, including the deployment of 140,000 US troops in nearby Iraq.

*Sub-Saharan Africa.* Due to their proximity to the Persian Gulf and the presence of radical Islam elements, East Africa and the Horn constitute the main focus of counter-terrorism concern in sub-Saharan Africa. There is al-Qaeda infrastructure in Kenya that predates 11 September, and it was utilised in the December 2002 attacks on Israeli targets. The weapons used in these operations came mainly from Somalia, where effective central government is lacking and arms of many varieties circulate freely and can be easily purchased. Somalia is also almost entirely Sunni Muslim, and has been the site of al-Qaeda-connected training camps. Although the camps were destroyed in the late 1990s, the fundamentalist organisation al-Ittihaad al-Islamiah is gaining Somali members. Though only a minority are likely to be interested in terrorism, in light of al-Qaeda's known interest in the region, this is cause for concern. A key al-Qaeda operative, Comoros-born Fazul Abdullah Mohammed – wanted for the 1998 bombing of the US embassy in Nairobi – is believed to be planning operations in East Africa. While the Ethiopian government vigorously opposes radical Islam, and moderates predominate among Ethiopia's Muslim population, there is an increasingly violent radical fundamentalist minority. The Sudanese government, though not provocative since 11 September, remains decidedly Islamist.

Throughout the region, indigenous authorities are institutionally weak. In light of these factors the US and its partners have extended training and financial support to cooperative governments in East Africa and the Horn, and adopted a preventive counter-terrorism posture involving airborne surveillance, maritime interdiction and small special-operations deployments in Djibouti and on amphibious assault ships in the Arabian Sea. Elsewhere, there are less obvious but still considerable challenges. Al-Qaeda appears to be involved in the West African diamond trade. Heightened Christian/Muslim unrest in the central Nigerian state of Plateau could lead to the country's becoming at least a recruiting node for al-Qaeda. An al-Qaeda operation in South Africa was revealed in May 2004. Although the operatives were arrested and deported, and were apparently engaged in support activity (gathering fake South African passports) rather than operational targeting, their presence demonstrated the breadth, integration and versatility of the global network; some of the passports were uncovered in London. Broadly speaking, there are more weak and failed states in sub-Saharan Africa than in any other region. Because such states afford relative freedom of action to illicit actors, they are particularly susceptible to becoming terrorist havens.

*Western Hemisphere.* While the global jihadist movement seemed to redouble efforts to disrupt the Saudi regime – the 'near enemy' – al-Qaeda's public rhetoric clearly indicates that the US – the 'far enemy' – remains the group's primary foe. The trend line of al-Qaeda attacks since the Iraq intervention began in March 2003 – Saudi Arabia, Morocco, Saudi Arabia again, Turkey, Spain, Saudi Arabia yet again – reflects an increasing inclination to target close US partners and allies. Bin Laden's disingenuous offer of a truce, or 'reconciliation', to those partners and allies and partners on the heels of the Madrid bombings in an attempt to isolate the United States reinforces the primacy of targeting the US. It appears that al-Qaeda has reserved US territory for its most spectacular mass-casualty operations for maximum political and religious effect, and in late May 2004 top-ranking US law-enforcement officials publicly alerted the American population to a higher likelihood of a major attack in the ensuing summer. This warning was premised on intelligence agencies' virtual certainty that al-Qaeda operatives were in the US, recruiting from among US residents and planning attacks, and probably on increased but non-specific 'chatter' collected by intelligence agencies via technical means and from human sources.

US homeland security has improved markedly in particular areas, such as aviation, but it is still a long way from the comprehensive vulnerability-based system initially envisaged by Bush administration. North of the US border, Canada's liberal immigration policy is viewed as a

potential point of vulnerability, and traditionally sparse border coverage by both American and Canadian authorities is still catching up with post-11 September security imperatives. While illegal immigration problems have produced much denser coverage of the US–Mexico border, relentlessly heavy human traffic and drug enforcement concerns impinge on counter-terrorism capacity. Thus far, Latin America has not appeared to be a hotbed of jihadist activity. But there is evidence that Hizbullah, Hamas and al-Qaeda are involved in illicit activities in South America's 'triple frontier' where the Argentine, Brazilian and Paraguayan borders meet – a notoriously difficult environment for law enforcement with a large Arab immigrant population. These operations appear to be mainly aimed at generating and laundering funds, but recruitment could also be under way. Jamaat-al-Muslimeen, a radical Muslim organisation based in Trinidad and Tobago, has also come under scrutiny over suspected links to al-Qaeda. The US has committed substantial military and law-enforcement resources to counter-insurgency and counter-narcotics operations in the Andes – principally against the Revolutionary Armed Forces of Colombia (FARC). Venezuelan President Hugo Chavez has provided some tactical support to the FARC and has criticised US-led intervention and is broadly anti-American, but no evidence has emerged of his substantive support for Islamic terrorists. The US forward presence in South America, as well as American hemispheric dominance, has some deterrent effect. In addition, US intelligence capacities in Latin America, built up during the Cold War and maintained on account of the drug- and insurgency-related problems in the Andes, are strong.

The only major populated region in which transnational Islamist terrorists have not appeared heavily active is East Asia. In China's Xinjiang province, there are militant Muslim Uighur separatists, some trained in Afghanistan, but they are relatively few and containable. Al-Qaeda probably has no substantial franchises in North-east Asia. In May 2004, however, Japanese authorities – prompted by the arrest in Germany of a Frenchman convicted in France in absentia of several violent crimes who had worked in Japan and was suspected of assisting Islamic militants – launched a probe for al-Qaeda operatives that resulted in the detention of three Bangladeshis, an Indian and a Malian on immigration charges. More generally, Japan and South Korea's close strategic alignments with the US and the large US military deployments that they host make them potential targets.

Table 42 Designations of aircraft

## Notes

1 [Square brackets] indicate the type from which a variant was derived: 'Q-5 ... [MiG-19]' indicates that the design of the Q-5 was based on that of the MiG-19.

2 (Parentheses) indicate an alternative name by which an aircraft is known, sometimes in another version: 'L-188 ... *Electra* (P-3 *Orion*)' shows that in another version the Lockheed Type 188 *Electra* is known as the P-3 *Orion*.

3 Names given in 'quotation marks' are NATO reporting names, e.g., 'Su-27... "Flanker"'.  
4 When no information is listed under 'Country of origin' or 'Maker', the primary reference given under 'Name/designation' should be looked up under 'Type'.

5 For country abbreviations, see 'Index of Countries and Territories' (pp. 367-68).
